

Prahl Portfolio Work Log - September 7, 2026

Compiled summary for Monday, September 7, 2026 - focus: continuing the Prahl.dev Portfolio Alla Vostra project-page refinement after the August 24 Visual Hierarchy annotation pass, booting the local Next.js site at <http://127.0.0.1:3000>, reviewing the current Portfolio snapshot and every pre-existing Portfolio PDF worklog, locating the Alla Vostra Play Store raw, mockups, and final screenshot folders, replacing the Alla Vostra overview Play Store images with the requested final trimmed assets, preserving image edges through correct aspect ratios and contain scaling, continuing UI Foundations Visual Hierarchy work across Pre-Scrolling, On-Scrolling, and During Shopping stacks, centering Secondary, Tertiary, and Quaternary headers above their images, matching stack spacing, braces, line lengths, green eyebrow rotation, and Focal Point proximity across rows, removing Supporting Elements and Toolbar callouts, preventing secondary/tertiary/quaternary device frames where requested, hiding stack headers during screenshot magnification across preview scopes, deriving the On-Scrolling secondary image from the exact Primary bitmap without the outer device frame, validating TypeScript, local route health, static export, Playwright-rendered geometry, image dimensions, and GitHub Actions status, refreshing the Portfolio project snapshot, and generating the September 7 Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after `portfolio_worklog_august24.pdf` and after the August 24 documentation state. The source commit reviewed for this record is `66287054011dd523a23544823e1af20544a2201b` on main, matching origin/main before this PDF was generated. That commit contains the Alla Vostra overview image replacement, Visual Hierarchy annotation and spacing work, screenshot-preview header hiding, and primary-derived no-device-frame On-Scrolling secondary image described here. Local TypeScript and static-export validation passed. The GitHub Actions Hostinger static-export workflow run for that push was checked and completed as a failure before any build steps were available in the log, consistent with the external workflow/account blockage recorded in the August worklogs rather than a local source failure. No new commit, push, deployment, publish, or Hostinger synchronization was performed during this worklog-generation pass; the user explicitly requested that the Portfolio website remain local for now. The only local source delta before this PDF was generated was the refreshed `portfolio_PROJECT_SNAPSHOT.txt` documentation snapshot.

Source Materials Reviewed

- Verified the United States Eastern date with TZ=America/New_York date, which reported Monday, September 7, 2026 at 9:45 PM EDT during the worklog pass.
- Ran `./read_project.sh` from `/Users/prahlin/gh/portfolio` and regenerated `portfolio_PROJECT_SNAPSHOT.txt` before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed `portfolio_PROJECT_SNAPSHOT.txt`, including project notes, source tree, public image inventories, PDF worklog inventory, package and deployment configuration, current git context, recent commits, generated/cache ignore policy, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF:
 - `portfolio_worklog_july11.pdf`, `portfolio_worklog_july14.pdf`,
 - `portfolio_worklog_july15_part1.pdf`, `portfolio_worklog_july15_part2.pdf`,
 - `portfolio_worklog_july16.pdf`, `portfolio_worklog_july19.pdf`, `portfolio_worklog_july20.pdf`,
 - `portfolio_worklog_july21.pdf`, `portfolio_worklog_july22.pdf`, `portfolio_worklog_july23.pdf`,
 - `portfolio_worklog_july24.pdf`, `portfolio_worklog_july25.pdf`, `portfolio_worklog_july29.pdf`,
 - `portfolio_worklog_july30.pdf`, `portfolio_worklog_july31.pdf`,
 - `portfolio_worklog_august1_part1.pdf`, `portfolio_worklog_august1_part2.pdf`,
 - `portfolio_worklog_august1_part3.pdf`, `portfolio_worklog_august3.pdf`,
 - `portfolio_worklog_august4.pdf`, `portfolio_worklog_august5.pdf`,
 - `portfolio_worklog_august6.pdf`, `portfolio_worklog_august10_part1.pdf`,

- portfolio_worklog_august10_part2.pdf, portfolio_worklog_august11.pdf, portfolio_worklog_august12_part1.pdf, portfolio_worklog_august12_part2.pdf, portfolio_worklog_august14.pdf, portfolio_worklog_august16.pdf, and portfolio_worklog_august24.pdf.
- Extracted text from all thirty existing Portfolio PDFs with pdftotext to preserve title cadence, daily and same-day part naming, opening-summary density, section order, bullet-heavy technical voice, validation language, files-touched lists, follow-up context, output-artifact close, and root-level filename style.
- Checked recent PDF metadata with pdfinfo and pdffonts. The mature Portfolio artifacts use letter-size pages, PDF 1.4 output, Helvetica Type 1 text, Codex author/creator/producer metadata, no custom metadata stream, and root-level filenames in the portfolio_worklog_monthday pattern.
- Used portfolio_worklog_august24.pdf as the closest chronological and structural baseline, with portfolio_worklog_august16.pdf and portfolio_worklog_august14.pdf as supporting references for Visual Hierarchy, screenshot-preview, cache-clearing, and browser-measurement language.
- Reviewed git history and state through git log, git show --stat, git show --name-status, git branch -vv, git status, git diff --stat, git diff --name-status, package scripts, local validation output, local route checks, and GitHub Actions run history. HEAD and origin/main resolved to 6628705 before this PDF was generated.
- Reviewed app/projects/alla-vostra/page.tsx, app/projects/alla-vostra/ProductFlowSwitcher.tsx, app/ScreenshotPreviewLayer.tsx, app/globals.css, portfolio_PROJECT_SNAPSHOT.txt, the new Play Store images under public/images/alla-vostra/play-store, the new primary-derived no-device-frame home screenshot, the local /projects/alla-vostra route, and the current root-level Portfolio PDF inventory.
- Cross-checked the Alla Vostra source repository paths that informed the user guidance and asset import: /Users/prahlin/gh/alla_vostra/docs/play-store/screenshots/raw, /Users/prahlin/gh/alla_vostra/docs/play-store/screenshots/mockups, and /Users/prahlin/gh/alla_vostra/docs/play-store/screenshots/final.

Baseline Status Before September 7 Work

- August 24 left the Alla Vostra UI Foundations Visual Hierarchy section without the earlier Tutorial subsection and with the Pre-Scrolling row organized around PRIMARY, SECONDARY, TERTIARY, and QUATERNARY stacks.
- The Pre-Scrolling row already had vertical Viewing Area and Focal Point annotation language, white line markers, green eyebrow labels, and product-image callouts, but later rows still needed additional parity with that accepted visual rhythm.
- The Alla Vostra overview section still pointed to the older Play Store image set: playstore1.png, playstore2.png, playstore4.png, and playstore5.png. The final requested assets lived in the Alla Vostra repository under the Play Store screenshots final folder.
- Overview wide thumbnails used a 16 / 9 frame with object-fit: cover. That treatment clipped edges once the user supplied 1536 x 1080 final screenshots and asked that no edges be cropped.
- The UI Foundations Visual Hierarchy stack headers could remain visible during screenshot-hover magnification, which caused Secondary, Tertiary, and Quaternary labels to bleed into enlarged imagery or clip into nearby assets.
- On-Scrolling and During Shopping rows still had mismatched vertical gaps, callout line lengths, label proximity, brace orientation, and green label rotation compared with the accepted Pre-Scrolling row.
- Supporting Elements and Toolbar callouts remained in places where the user no longer wanted them, creating extra annotation noise around already dense Visual Hierarchy stacks.
- Secondary, tertiary, and quaternary examples in On-Scrolling and During Shopping needed to avoid device-frame treatments and instead present scaled screenshot/image content inside the available stack height.
- The On-Scrolling secondary stack was close to the desired home-screen source, but it still used a separate no-frame export rather than an exact derivative of the On-Scrolling

primary image.

- The local development workflow still required explicit cache handling because rapid Turbopack, Next image, JSX, and CSS changes could appear stale until .next output was moved aside and the dev server was restarted.

Goals for September 7

- Boot and keep the Portfolio site available locally at <http://127.0.0.1:3000> without pushing or publishing public changes during the documentation pass.
- Locate the Alla Vostra Play Store raw, mockups, and final image folders, then bring the requested final Play Store assets into the Portfolio public image tree.
- Replace the current Alla Vostra overview images with playstore5_trim-lr10, playstore2_trim-lr10, feature-graphic-upload-clean-1024x500, and playstore4_trim-lr10 in the requested order.
- Preserve every image edge in the overview section by using the correct 1024 / 500 and 1536 / 1080 aspect ratios and contain-based image scaling.
- Continue refining the UI Foundations Visual Hierarchy section so Secondary, Tertiary, and Quaternary headers remain centered above the image featured below each stack.
- Match On-Scrolling and During Shopping substack vertical spacing, white line lengths, green eyebrow label rotation, brace placement, and Focal Point proximity to the Pre-Scrolling reference behavior.
- Remove Supporting Elements headers, their braces, and unnecessary Toolbar green headers/white lines from the Visual Hierarchy section.
- Prevent device frames from appearing on secondary, tertiary, and quaternary screenshot/image examples while preserving accepted image proportions and scale.
- Hide or remove stack headers during screenshot magnification everywhere the preview system applies, covering both UI Foundations and UX Product Flow preview scopes.
- Replace the On-Scrolling secondary image with an exact crop derived from the On-Scrolling primary image, scaled down to fit and without the outer device frame.
- Validate with TypeScript, local route checks, static export, Playwright measurements/screenshots, image metadata checks, diff checks, refreshed snapshot context, and a September 7 PDF worklog.

Work Completed - Local Context, Asset Discovery, and Overview Imagery

- Ran the project reader at the start of the broader September 7 work cycle, read the Portfolio snapshot, and studied the existing PDF worklogs before continuing source edits.
- Kept the local Next.js development server available at <http://127.0.0.1:3000> inside the portfolio-dev screen session for live review of /projects/alla-vostra.
- Located the Alla Vostra Play Store asset folders the user asked about: docs/play-store/screenshots/raw, docs/play-store/screenshots/mockups, and docs/play-store/screenshots/final inside /Users/prahlin/gh/alla_vostra.
- Copied the requested final Play Store assets into public/images/alla-vostra/play-store in the Portfolio repo: feature-graphic-upload-clean-1024x500.png, playstore2_trim-lr10.png, playstore4_trim-lr10.png, and playstore5_trim-lr10.png.
- Updated the Alla Vostra overview image list in app/projects/alla-vostra/page.tsx so the overview section now references the final Play Store feature graphic and trimmed screenshot set instead of the older playstore1/playstore2/playstore4/playstore5 files.
- Updated .overview-play-store-shot-wide in app/globals.css from 16 / 9 to 1536 / 1080 so the last three overview images use the correct final screenshot aspect ratio.
- Changed overview Play Store image rendering from object-fit: cover to object-fit: contain so the final assets maintain all edges and keep the current horizontal breathing room instead of being cropped by the thumbnail frame.
- Verified final asset dimensions with sips: the feature graphic is 1024 x 500, and playstore2_trim-lr10, playstore4_trim-lr10, and playstore5_trim-lr10 are each 1536 x 1080.

Work Completed - Visual Hierarchy Header Centering and Row Rhythm

- Changed the Visual Hierarchy stack header positioning so stack titles can use a per-stack CSS variable for horizontal offset instead of a fixed translate that left smaller stacks

visually off-center.

- Set the Pre-Scrolling Secondary, Tertiary, and Quaternary stacks to use zero title offset, keeping their headers centered above their featured images.
- Continued the same header-centering expectation through the later On-Scrolling and During Shopping adjustments so the stack label belongs to the image beneath it rather than the wider annotation lane.
- Matched the vertical space between the ON-SCROLLING main header and its substacks to the accepted PRE-SCROLLING spacing after the user clarified that the pre-scrolling row was the reference.
- Applied the same spacing correction to the DURING SHOPPING row so both later row headers now sit with the same kind of vertical relationship to their substacks.
- Moved the quaternary stack product image, header, and product-image callout lane left until the quaternary treatment matched the other pre-scrolling substacks while allowing acceptable bleed into the image and gradient.
- Tuned the quaternary cream radial background from fixed pixel dimensions into percentage dimensions so the cream field keeps its pre-hover proportions when the image magnifies.
- Preserved the accepted compact On-Scrolling secondary and tertiary image look after a later correction, scaling those substacks back down so they fit comfortably in their column after the device-frame removal.

Work Completed - Lines, Braces, Green Eyebrows, and Label Removal

- Matched the white line markers beside On-Scrolling and During Shopping substacks to the line length used by the Pre-Scrolling substacks.
- Adjusted white line proximity so the distance from image to line and line to green eyebrow label feels consistent with the established Pre-Scrolling system.
- Rotated green eyebrow headers for On-Scrolling and During Shopping to the same 90-degree reading pattern as the Pre-Scrolling callouts.
- Kept Focal Point text on one row for On-Scrolling and During Shopping while preserving its close relationship to the corresponding brace rather than letting the label drift away.
- Matched On-Scrolling and During Shopping primary stack brace behavior and Viewing Area text rotation to the Pre-Scrolling primary substack.
- Removed Supporting Elements headers from the Visual Hierarchy section after user review.
- Removed the Supporting Elements brace/bracket stacks that sat next to those deleted labels, leaving the visual hierarchy focused on the requested Viewing Area and Focal Point structures.
- Removed TOOLBAR green headers and white-line callouts from the On-Scrolling and During Shopping line-callout sets because the toolbar region was no longer needed in this annotation story.
- Kept the remaining APP HEADER, NAV BAR, HERO, PRODUCT IMAGE, MAIN CONTENT, and SHOPPING CART callouts where they still served the visual hierarchy explanation.

Work Completed - Screenshot and Image Stack Treatments

- Removed device-frame treatment from secondary, tertiary, and quaternary screenshots/images in the relevant Visual Hierarchy rows, keeping device frames reserved for the primary full-screen examples.
- Scaled On-Scrolling and During Shopping secondary/tertiary/quaternary screenshots upward within their available vertical space while avoiding top and bottom spillover against the primary stack bounds.
- Restored the exact prior look of the On-Scrolling secondary and tertiary images after the user clarified that only the device frames should be removed, not the accepted underlying compositions.
- Replaced the On-Scrolling secondary stack with an image derived directly from the On-Scrolling primary source, public/images/alla-vostra-home-framed-no-island.png, rather than a merely similar no-frame export.
- Created public/images/alla-vostra-home-primary-crop-no-device-frame.png by extracting the primary home-screen bitmap content and cleaning only frame-like edge pixels connected to the top and bottom screen boundary.

- Preserved the new primary-derived On-Scrolling secondary asset at 1182 x 2559 and updated ProductFlowSwitcher to use the matching 1182 / 2559 aspect ratio.
- Verified in Playwright that .flow-screen-stack-step-4 now renders /images/alla-vostra-home-primary-crop-no-device-frame.png with a measured frame aspect of approximately 0.4619, matching the generated asset proportions.
- Left the On-Scrolling tertiary stack on the accepted MOS9 bright soft mockup image with its 853 / 1280 aspect ratio after restoring the earlier look.
- Kept the quaternary product image treatment tied to the proportional cream field so hover magnification no longer makes the cream field disproportionately large relative to the cheeseboard image.

Work Completed - Screenshot Preview, Cache Handling, and Interaction Rules

- Updated app/ScreenshotPreviewLayer.tsx to track the closest .flow-screen-stack for an active screenshot-preview target.
- Added data-screenshot-preview-active to the active stack while a hover/tap preview is shown and removed that attribute when preview exits, the pointer cancels, the window blurs, the page scrolls, or the preview system cleans up.
- Added CSS that hides the active stack h4 and cloned preview h4 while screenshot magnification is active, satisfying the rule that headers should disappear instead of bleeding into enlarged images.
- Applied the header-hiding behavior through the shared screenshot preview layer, so it works for preview scopes across UI Foundations and UX Product Flow rather than a single hand-tuned Visual Hierarchy case.
- Preserved the existing composed-preview behavior for protected image compositions, masks, gradients, and overlays while adding the active-stack header hiding on top.
- Cleared stale developer cache when requested by moving the .next output aside into a timestamped stale Visual Hierarchy cache folder and restarting the portfolio-dev server session.
- Confirmed the refreshed local dev server responded at http://127.0.0.1:3000 and that the Alla Vostra route could still be reached locally.
- Restored next-env.d.ts to its dev-server route-type import after the static-export validation temporarily rewrote it to the production .next/types route import, leaving the final source diff scoped to the intended documentation snapshot and generated worklog artifact.

Work Completed - Commit Context and Documentation Pass

- Recommended the user-requested commit message in one header followed by hyphen-prefixed lines after the source work, covering the overview image replacement, final assets, Visual Hierarchy spacing, line/label cleanup, device-frame removal, preview header hiding, and primary-derived On-Scrolling secondary image.
- Reviewed the resulting source commit 6628705, Refined portfolio hero presentation, and treated the actual diff and rendered checks as the source of truth because the commit body itself used generic wording.
- Re-ran ./read_project.sh for this September 7 documentation pass so portfolio_PROJECT_SNAPSHOT.txt records the current source tree, image inventory, PDF inventory, git context, and recent commit state.
- Re-extracted and reviewed all existing Portfolio worklog PDFs with pdftotext before composing this September 7 PDF, keeping the August 24 worklog as the main structure and tone reference.
- Checked pdftinfo and pdffonts for the latest mature PDF metadata and preserved letter-size page geometry, PDF 1.4 output, Helvetica Type 1 text, Codex metadata, and root-level naming.
- Respected the user instruction during this pass to keep the Portfolio website local for now. No commit, push, deployment, publish, or production synchronization was performed while creating this PDF.

Validation Summary

- npm run check passed during the September 7 source pass and again during this

- worklog-generation pass, confirming TypeScript succeeded with tsc --noEmit.
- npm run build:static passed locally during the worklog-generation pass, with Next.js 16.2.10 compiling successfully, running TypeScript, and prerendering /, /articles, /projects/alla-vostra, and /projects/cinerific as static routes.
- curl -I http://127.0.0.1:3000/projects/alla-vostra returned HTTP 200 OK while the local dev server was running on port 3000.
- Playwright opened /projects/alla-vostra, switched to UI Foundations, waited for the Visual Hierarchy stack images, and confirmed the On-Scrolling secondary stack rendered the new primary-derived no-device-frame image source.
- Playwright measured the On-Scrolling secondary frame at approximately 159 x 344.2 CSS pixels in the inspected viewport, yielding an aspect ratio of about 0.4619, consistent with the 1182 / 2559 asset.
- Playwright screenshot review confirmed the On-Scrolling secondary image now matches the primary home-screen composition at smaller scale without the outer device frame.
- Playwright hover validation confirmed a screenshot-preview-active stack hides its h4 with opacity 0 and visibility hidden during magnification.
- git diff --check passed during the source-validation pass, confirming no whitespace errors in the edited source files.
- sips confirmed the imported Play Store assets and the primary-derived home-screen crop dimensions recorded in this worklog.
- git branch -vv confirmed main tracking origin/main at 6628705 before this PDF was generated.
- gh run list and gh run view confirmed the Hostinger static-export workflow for 6628705 existed and completed as failure within roughly four seconds, with no failed job log available through gh run view --log-failed. Local static export passed, so this remained recorded as remote workflow/account context rather than a local source validation failure.

Files Touched and Artifacts

- app/projects/alla-vostra/page.tsx: changed the Alla Vostra overview Play Store image sources to the requested final feature graphic and trimmed screenshot assets.
- app/globals.css: preserved overview image edges with contain scaling and 1536 / 1080 wide-image framing; tuned Visual Hierarchy stack spacing, title offsets, line lengths, label rotation, Focal Point proximity, primary brace and Viewing Area behavior, quaternary callout alignment, proportional quaternary cream hover background, and screenshot-preview header hiding.
- app/projects/alla-vostra/ProductFlowSwitcher.tsx: removed unneeded Supporting Elements and Toolbar callout data, simplified Focal Point labels to one row, kept On-Scrolling and During Shopping callouts aligned to the Pre-Scrolling model, updated small-stack image selection, and wired the On-Scrolling secondary stack to the primary-derived no-device-frame asset with the correct aspect ratio.
- app/ScreenshotPreviewLayer.tsx: tracked the active preview stack and applied data-screenshot-preview-active so stack headers can be hidden while hover/tap magnification is active.
- public/images/alla-vostra/play-store/feature-graphic-upload-clean-1024x500.png: added the requested Play Store feature graphic asset from the Alla Vostra final screenshots folder.
- public/images/alla-vostra/play-store/playstore2_trim-lr10.png: added the requested final trimmed Play Store screenshot.
- public/images/alla-vostra/play-store/playstore4_trim-lr10.png: added the requested final trimmed Play Store screenshot.
- public/images/alla-vostra/play-store/playstore5_trim-lr10.png: added the requested final trimmed Play Store screenshot.
- public/images/alla-vostra-home-primary-crop-no-device-frame.png: generated a no-device-frame image directly from the On-Scrolling primary home-screen bitmap for the secondary stack.
- portfolio_PROJECT_SNAPSHOT.txt: refreshed by read_project.sh to document the current project tree, git state, worklog inventory, generated/cache ignore policy, public asset inventory, validation context, and documentation pass.

- portfolio_worklog_september7.pdf: generated as the new root-level PDF worklog artifact for this September 7 Portfolio session.

Follow-Up Context

- The latest committed source state before this PDF was generated is 6628705 on main and origin/main, titled Refined portfolio hero presentation.
- The source commit contains the September 7 Alla Vostra overview and Visual Hierarchy source changes, while this PDF-generation pass intentionally made no new commit or push.
- The local changes after this documentation pass should be portfolio_PROJECT_SNAPSHOT.txt and portfolio_worklog_september7.pdf only. Generated .next and out output remain local build/dev artifacts and are not intended source changes.
- The user explicitly requested that the Portfolio website stay local for now. Future commit, push, deployment, publish, or Hostinger synchronization should wait for a direct user request and should still ask for the desired commit message first.
- The UI Foundations tab must be active before browser scripts inspect the Visual Hierarchy DOM, because the Alla Vostra page still defaults to UX Product Flow.
- Future On-Scrolling secondary changes should remember that the current asset is intentionally derived from public/images/alla-vostra-home-framed-no-island.png. If the primary source changes, the no-device-frame derivative should be regenerated from that same primary bitmap rather than swapped for a similar export.
- Future overview-image changes should preserve the non-cropping behavior unless the user explicitly asks for cover-style thumbnails, because the September 7 request was to keep every image edge visible.
- Future Visual Hierarchy line/label changes should preserve the accepted Pre-Scrolling reference behavior for white-line length, green eyebrow rotation, Focal Point one-row rendering, and brace proximity.
- The screenshot-preview header-hide rule is now intentionally broad. If stack headers need to remain visible in a future preview, that should be handled as an explicit preview-scope exception rather than by reverting the shared active-stack attribute.
- The GitHub Actions Hostinger static-export workflow remains unreliable remotely. The September 7 local static export passed, but the remote run for 6628705 failed quickly without a retrievable failed log through gh, matching the external blockage pattern recorded in August.

Output Artifact

- Generated: /Users/prahlin/gh/portfolio/portfolio_worklog_september7.pdf
- Companion sync file: /Users/prahlin/gh/portfolio/portfolio_PROJECT_SNAPSHOT.txt
- Source state reviewed: 66287054011dd523a23544823e1af20544a2201b on main and origin/main.
- Naming follows the existing root-level Portfolio convention: portfolio_worklog_september7.pdf. No Part suffix was used because no earlier September 7 Portfolio worklog PDF existed.
- The document records the September 7 Alla Vostra overview image replacement, Play Store asset import, Visual Hierarchy header/spacing/callout/brace cleanup, secondary/tertiary/quaternary no-device-frame treatment, screenshot-preview header hiding, developer cache clearing, primary-derived On-Scrolling secondary image generation, validation, workflow-status review, snapshot refresh, and documentation work in the established Prahlin Portfolio worklog format.
