

Prahl Portfolio Work Log - July 29, 2026

Compiled summary for Wednesday, July 29, 2026 - focus: continued PrahL.dev Portfolio landing-page refinement after the July 25 Resume, LinkedIn, and proof-stat pass, including transparent baked-stroke LinkedIn and Resume label images, social icon-box parity, small-screen stroke cleanup, hero headline and proof-copy changes, React Native / Kotlin wrapping, Cinerific hero tablet frame restoration, chip/proof responsive matching, hero visual stack re-centering, case-study title typography restoration, case-study PLAT:/FACTOR icon restructuring, local development-cache resets, browser-render verification, public synchronization, refreshed project snapshot context, review of all prior Portfolio PDF worklogs, and generation of the daily Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers only Prahl Portfolio work performed for the July 29 design session and its late-night continuation: the refreshed project snapshot, review of every pre-existing Portfolio worklog PDF, commit 88a864f from Wednesday, July 29, 2026 at 21:07:55 EDT, commit 3d7619e from Thursday, July 30, 2026 at 00:24:54 EDT, local development-cache handling, validation checks, GitHub Actions deployment-status review, and this worklog-generation step. The July 30 timestamp is recorded because the final source commit crossed midnight while continuing the requested July 29 visual pass.

Source Materials Reviewed

- Ran `./read_project.sh` from `/Users/prahlin/gh/portfolio` and regenerated `portfolio_PROJECT_SNAPSHOT.txt` before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio work.
- Reviewed the refreshed `portfolio_PROJECT_SNAPSHOT.txt`, including project notes, current source tree, line-numbered source dumps, root/tooling/deployment configuration, public image inventory, PDF inventory, git context, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF: `portfolio_worklog_july11.pdf`, `portfolio_worklog_july14.pdf`, `portfolio_worklog_july15_part1.pdf`, `portfolio_worklog_july15_part2.pdf`, `portfolio_worklog_july16.pdf`, `portfolio_worklog_july19.pdf`, `portfolio_worklog_july20.pdf`, `portfolio_worklog_july21.pdf`, `portfolio_worklog_july22.pdf`, `portfolio_worklog_july23.pdf`, `portfolio_worklog_july24.pdf`, and `portfolio_worklog_july25.pdf`.
- Extracted text from all twelve existing Portfolio PDFs with `pdftotext` to preserve the same title cadence, opening-summary density, section order, bullet-heavy technical voice, validation language, files-touched list, follow-up context, and output-artifact close.
- Used `portfolio_worklog_july25.pdf` as the closest same-project reference because it documented the latest hero/social/proof-stat iteration, development-cache reset language, PDF metadata expectations, source/push status wording, and current root-level naming convention.
- Checked mature PDF metadata with `pdftinfo` and confirmed the current Portfolio artifacts use letter-size pages, Helvetica/Helvetica-Bold base fonts, compact five-to-six page bodies, root-level filenames, and Codex standard-library PDF-generator metadata.
- Reviewed Git history through `git log`, `git show --stat`, `git show --name-status`, targeted diffs, branch state, and the committed scopes for 88a864f and 3d7619e. HEAD and origin/main both resolved to 3d7619e before this PDF was generated.
- Reviewed `app/page.tsx`, `app/globals.css`, `app/ProjectCarouselButton.tsx`, `app/ProofStats.tsx`, `app/PortfolioSections.tsx`, `public/images/social-labels/linkedin-label.png`, `public/images/social-labels/resume-label.png`, `package.json`, `read_project.sh`, and the root-level PDF inventory before generating this artifact.
- Checked the running local development route at `http://127.0.0.1:3000/` and confirmed the route returned 200 OK from the Next.js dev server.

Baseline Status Before July 29 Work

- The July 25 Portfolio site already had the Full-Stack React Native / Kotlin Developer positioning, Resume social CTA, official LinkedIn destination and blue color, icon-left social-button order, layered social text stroke system, responsive hero stack scaling, proof-stat one-row behavior, and the July 25 PDF worklog committed to the project history.
- The social labels still depended on live stroked text. On small screens, the Resume and LinkedIn label edges could show jagged stroke artifacts, especially around tight letterforms and layered green/black/blue stroke boundaries.
- The Resume and LinkedIn buttons had similar layout roles but still needed user-directed optical matching across icon-box size, baked label width, horizontal spacing, and center alignment.
- The hero headline and proof stats were still moving through Expertise, Mastery, React Native / Kotlin, and no-plus-sign copy adjustments, while the slash phrase needed protection from awkward wrapping.
- The Cinerific hero tablet image had previously been transformed inside the tablet frame. The user wanted the original-looking device-frame scale and rotation restored, then the surrounding shell dimensions adapted around that appearance.
- The chip stack and proof stack were not yet fully coupled. The user wanted matching widths, one-row transition behavior, fixed horizontal gaps, taller one-row chips, and reduced visual distance between the two stacks.
- The profile-photo and device-frame hero visual stack needed a measured vertical centering rule using the top navigation and lower chip/proof area as reference points, followed by a 10 percent full-stack reduction.
- The featured case-study cards still carried heavier stylized title and device icon treatments that were useful in the hero carousel but too frame-like for compact card metadata.

Goals for July 29

- Replace jagged live-stroked LinkedIn and Resume social label text with transparent baked-stroke image labels while preserving the accepted color/stroke appearance.
- Nudge LinkedIn and Resume icon/label spacing and icon-box dimensions until both social buttons read as part of the same system.
- Update the hero headline and proof stats to the requested Mastery, no-plus-sign, green React Native / Kotlin, and no-Mastery-in-headline copy state.
- Keep React Native / together during wrapping, and allow that phrase to stay on one row even when it visually reaches toward the right-side hero devices.
- Restore and adapt the Cinerific hero tablet frame without reintroducing the unwanted inner screenshot transform.
- Match the chip stack to proof-stack width and one-row behavior while keeping exact horizontal gaps through responsive stretching.
- Re-center the profile-photo/device-frame hero stack relative to the navigation and chip/proof reference edges, then scale that entire visual group down by 10 percent.
- Restore landing case-study project titles to the original first-draft font face, 24px size, 800 weight, unstroked text, and no decorative shadow.
- Replace case-study device/platform artwork with semantic PLAT: and FACTOR stacks: AND, IOS, WEB symbols on the platform side, and symbol-free PHONE/TABLET frames on the factor side.

Work Completed - Social Label Images and Hero Copy

- Investigated the jagged Resume edge behavior and treated it as a layered stroke rasterization problem rather than a single green-or-black color leak.
- Iterated Resume stroke widths through the requested green and black values, then moved the sensitive LinkedIn and Resume words away from live CSS text-stroke rendering.
- Drew LinkedIn and Resume as transparent baked-stroke PNG label assets and imported them under `public/images/social-labels/`.
- Replaced the live LinkedIn and Resume label text in the hero buttons with image labels so small-screen rendering no longer depends on browser text-stroke edges.

- Preserved the accepted LinkedIn blue treatment and Resume green/white/black treatment after rasterization.
- Reduced the Resume and LinkedIn icon button scale by the requested 5 percent, moved icon/label pairs 2px closer toward center, and matched the LinkedIn outer icon-box look to Resume after the user noticed uneven edges.
- Updated the hero proof stat from Full-Stack Expertise to Full-Stack Mastery and changed the tight-mode split in ProofStats.tsx to Full-, Stack, Mastery.
- Removed plus signs from the 1.0k and 0.1k proof values.
- Removed Mastery from the visible hero headline and settled the headline into Full-Stack, React Native / Kotlin, Developer, with React Native / Kotlin highlighted in CTA green.
- Protected React Native / as a nowrap unit inside the headline so Native does not wrap away from the slash.

Work Completed - Hero Device, Chip, and Proof Layout

- Restored the Cinerific hero tablet screen image scale and rotation by removing the previous inner image transform and moving frame adaptation to the tablet shell dimensions.
- Tuned tablet-shell fitted width variables for desktop and mobile so the original-looking rotated frame could remain while fitting the restored image better.
- Matched the chip stack width to the proof stack width through the shared responsive measurement path.
- Increased chip font size by 1px, doubled fixed horizontal chip gaps, reduced the vertical gap between chip and proof stacks in one-row mode, and increased one-row chip height by 10 percent.
- Changed the chip stack to expand from multiple rows to one row during the same broad stretching window as the proof stack.
- Updated the hero visual measurement logic so the profile photo, two phone frames, and tablet frame center between the top navigation and lower chip/proof reference area on two-column hero layouts.
- Scaled the full profile-photo/device-frame hero visual group to 0.9 while preserving its internal composition.
- Cleared the local Next.js development cache during rapid CSS/JSX iteration when stale output made visual changes appear unchanged.

Work Completed - Case-Study Titles and Platform/Factor Displays

- Restored landing case-study project title names to the original first-draft typography for non-article cards: inherited font face, 24px size, 800 weight, unstroked text, and no shadow.
- Kept the Articles/UIUX mode separate so article cards retained their own title behavior.
- Iterated the case-study platform icon treatment from filled device frames through transparent and 0.2-opacity fills before separating platform meaning from form-factor meaning.
- Removed phone/tablet frames from the PLAT platform side in the case-study section and kept Android, Apple/iOS, and web symbols as direct platform indicators.
- Replaced fragile external Android/iOS img rendering with inline SVG platform marks so symbols show reliably in card title rows.
- Added a PLAT: heading above the platform column and labels for AND, IOS, and WEB above the correct Android, Apple, and globe marks.
- Added a FACTOR heading next to PLAT: and centered PHONE and TABLET labels above their corresponding device-frame images.
- Rendered factor phone/tablet frames without Android or iOS symbols inside them, keeping those frames as pure form-factor silhouettes.
- Scoped the PLAT:/FACTOR layout to CaseStudyTitle usage only, leaving the hero carousel device stack unchanged.
- Verified by browser inspection that factor frames contained zero platform-symbol image nodes and that stale PLATFORMS pseudo-label content disappeared after a cache clear.

Work Completed - Commit Handling and Public State

- Recommended commit messages during the session in the user-requested format: one header

followed by hyphen-prefixed summary points in past tense.

- Committed and pushed 88a864f, Refined hero social labels and headline, covering transparent social-label assets, icon-box tuning, headline changes, and snapshot refresh work.
- Committed and pushed 3d7619e, Refined hero layout and case study platform visuals, covering headline/proof changes, hero tablet and visual-stack layout, chip/proof matching, original case-title typography, and PLAT:/FACTOR case-study stacks.
- Confirmed the final source branch state had HEAD and origin/main both at 3d7619e728fade254ebf18b153855fe28f915aae before this PDF was generated.
- Reviewed GitHub Actions after the pushes and found that the Build static export for Hostinger workflow runs for both 88a864f and 3d7619e completed with failure status. gh could not retrieve failed job logs for either run.
- Kept the refreshed project snapshot and this worklog PDF local as documentation artifacts pending a user-approved commit message.

Validation and Checks Performed

- Ran npm run check after the current source state and confirmed TypeScript validation passed with tsc --noEmit.
- Ran npm run build:static and confirmed the local Next.js static export completed successfully, compiling, type-checking, collecting page data, generating six static pages, and finalizing page optimization.
- Confirmed http://127.0.0.1:3000/ returned 200 OK from the running local Next.js dev server.
- Confirmed lsof showed node listening on TCP port 3000 and screen -ls showed the detached portfolio-dev screen session.
- Used headless Chrome/CDP checks to verify case-study platform/factor DOM structure, visible symbol dimensions, zero platform-symbol images inside FACTOR frames, and removal of the stale PLATFORMS pseudo-label.
- Captured case-study section screenshots during visual verification and used them to catch stale CSS before clearing the dev cache.
- Checked git rev-parse HEAD and git rev-parse origin/main and confirmed both returned 3d7619e728fade254ebf18b153855fe28f915aae before generating this worklog.
- Checked git status and confirmed only portfolio_PROJECT_SNAPSHOT.txt was modified before this PDF was created.
- Restored next-env.d.ts after npm run build:static flipped the route-types import from .next/dev/types/routes.d.ts to .next/types/routes.d.ts, keeping build validation from leaving unrelated generated-file noise.

Files Touched During July 29 Portfolio Work

- app/page.tsx - updated proof-stat values and labels, hero headline structure, React Native / Kotlin green highlighting and nowrap behavior, LinkedIn/Resume image label usage, icon sizing, and social-button image/font relationships.
- app/globals.css - tuned social label/image sizing and gaps, hero chip/proof stack widths, chip font and spacing behavior, one-row chip/proof spacing, hero visual scaling, tablet-shell fitted widths, case-study title typography, and case-study platform/factor column styling.
- app/ProjectCarouselButton.tsx - added measurement updates for hero proof/chip/visual alignment, inline Android and Apple platform marks, optional tablet platform-icon hiding, case-study-only PLAT:/FACTOR rendering, and factor device-frame output without symbols.
- app/ProofStats.tsx - updated the special tight-mode proof-stat split from Full-Stack Expertise to Full-Stack Mastery.
- app/PortfolioSections.tsx - passed the case-study-only platform-label mode through CaseStudyTitle and restored original landing-card title typography for non-article cards.
- public/images/social-labels/linkedin-label.png - new transparent baked-stroke LinkedIn label image used in the hero social button.
- public/images/social-labels/resume-label.png - new transparent baked-stroke Resume label image used in the hero social button.
- _martin3.jpg - appeared in the July 29 commit scope as a root-level image artifact; it was not part of the later hero-layout or platform/factor code pass.

- portfolio_PROJECT_SNAPSHOT.txt - regenerated by ./read_project.sh for this worklog pass and left modified locally as the current project-context artifact.
- portfolio_worklog_july29.pdf - generated as this daily Portfolio worklog artifact in the root-level Portfolio worklog convention.

Follow-Up Context

- The public source branch is already represented by origin/main at 3d7619e, but the GitHub Actions Build static export for Hostinger workflow currently reports failure for both post-July-25 source pushes. Local npm run build:static succeeds, so the next deployment pass should inspect workflow configuration, runner logs, or GitHub-side publishing conditions rather than assuming a local source build failure.
- The refreshed portfolio_PROJECT_SNAPSHOT.txt and this July 29 PDF remain local until the user provides or approves a commit message for documentation artifact changes.
- Because this PDF increases the Portfolio root-level worklog artifact count from 12 to 13, visible public copy can be updated later only if the user wants exact Portfolio worklog inventory reflected in card or proof-stat copy.
- The LinkedIn and Resume hero labels now depend on transparent raster assets. Future social-button font/stroke changes should update those image assets as well as surrounding icon-box CSS.
- The React Native / headline segment is intentionally protected from slash-separated wrapping. Future headline copy should preserve that unit unless the user asks to reopen wrapping behavior.
- The hero chip stack and proof stack now share width and one-row behavior. Future breakpoint changes should test both stacks together, especially around wide desktop and the one-row transition.
- The hero visual stack is intentionally centered between the top navigation and lower chip/proof reference area and globally scaled to 0.9. Future device-frame changes should preserve that relationship unless the user asks for a new composition.
- Case-study platform displays now separate platform from factor: PLAT: carries AND, IOS, WEB symbols; FACTOR carries PHONE and TABLET frames without embedded platform symbols.
- Continue treating future Portfolio work as local-only unless the user explicitly asks to commit, push, deploy, publish, or update the public website.

Output Artifact

- Generated file: portfolio_worklog_july29.pdf.
- Location: /Users/prahlin/gh/portfolio/portfolio_worklog_july29.pdf.
- Naming follows the existing root-level Portfolio convention: portfolio_worklog_july29.pdf. No part suffix was used because this is the first July 29 Portfolio worklog artifact.
- Uses the same daily worklog structure and compact technical voice established by portfolio_worklog_july11.pdf through portfolio_worklog_july25.pdf.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this artifact.
- The local project date used for this filename and title is Wednesday, July 29, 2026 EDT, matching the requested worklog date while explicitly recording the late-session source commit that landed after midnight on Thursday, July 30, 2026.
