

Prahl Portfolio Work Log - August 1, 2026 (Part 1)

Compiled summary for Saturday, August 1, 2026 - Part 1 - focus: continuing the Prahl.dev Portfolio Alla Vostra case-study page after the July 31 flow-chart transparency pass, restructuring the Alla Vostra Product Flow diagram into Tutorial, Browse, Shop, Cart, Checkout, Payment, and Confirmed sections, pairing the diagram with the small startup screenshot, rebuilding Alla Vostra and Cinerific hero source buttons with logo-only store/source controls, adding Apple/Figma/Google Play logo assets, validating local routes and static export, checking Hostinger workflow status, and generating the August 1 Part 1 Portfolio PDF worklog. Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close. This artifact intentionally covers only Prahl Portfolio work performed for the August 1 Part 1 local project session after portfolio_worklog_july31.pdf: source commit 22aab85966ba4ecf3e3dc835a20ebe6bd5564cce, source commit a796e3d1a70559433c4e8d5062426c0f76212681, the refreshed project snapshot, local validation checks, GitHub Actions status review, and this worklog-generation step. Alla Vostra, Cinerific, and Credit King application repositories were not changed for this record.

Source Materials Reviewed

- Ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed portfolio_PROJECT_SNAPSHOT.txt, including project notes, current source tree, line-numbered source dumps, tooling/deployment configuration, public image inventory, root-level PDF inventory, git context, and the standing commit-message instruction.
- Reviewed every pre-existing Portfolio root-level worklog PDF: portfolio_worklog_july11.pdf, portfolio_worklog_july14.pdf, portfolio_worklog_july15_part1.pdf, portfolio_worklog_july15_part2.pdf, portfolio_worklog_july16.pdf, portfolio_worklog_july19.pdf, portfolio_worklog_july20.pdf, portfolio_worklog_july21.pdf, portfolio_worklog_july22.pdf, portfolio_worklog_july23.pdf, portfolio_worklog_july24.pdf, portfolio_worklog_july25.pdf, portfolio_worklog_july29.pdf, portfolio_worklog_july30.pdf, and portfolio_worklog_july31.pdf.
- Extracted text from all fifteen existing Portfolio PDFs with pdftotext to preserve title cadence, opening-summary density, section order, bullet-heavy technical voice, validation language, files-touched lists, follow-up context, and output-artifact close.
- Used portfolio_worklog_july30.pdf as the mature six-page same-project reference while also reviewing portfolio_worklog_july31.pdf as the latest naming and metadata baseline.
- Checked PDF metadata with pdftinfo and confirmed the current Portfolio artifacts use root-level filenames, letter-size pages, PDF 1.4 output, Codex author/creator metadata, and Helvetica-style base fonts.
- Reviewed Git history through git log, git show --stat, git show --name-status, branch state, and the committed scopes for 22aab85 and a796e3d. HEAD and origin/main both resolved to a796e3d before this PDF was generated.
- Reviewed app/globals.css, app/projects/alla-vostra/page.tsx, app/projects/cinerific/page.tsx, public/images/alla-vostra-product-flow-mockup.svg, the new Apple/Figma/Google Play logo assets, read_project.sh, and the root-level PDF inventory.
- Checked local routes at http://127.0.0.1:3000/, /projects/alla-vostra, and /projects/cinerific, then checked gh run list for the latest Hostinger workflow state.

Baseline Status Before August 1 Part 1 Work

- The July 31 Portfolio worklog had already recorded the first Alla Vostra flow-chart

visibility pass: section-band opacity was driven to transparent, the green portfolio grid remained visible, local dev cache was cleared, and Alla Vostra route availability was confirmed.

- The Product Flow diagram still needed structural work after the transparency cycle. Shop needed its own section, Tutorial needed to precede Browse, Cart needed a Tutorial/Selection/Cart arrangement, and arrows still needed several user-directed routing corrections.
- The screenshot/diagram pair still needed responsive relationship tuning. Portrait/mobile views needed width matching and vertical centering, while horizontal layouts needed the diagram height matched to the adjacent screenshot height.
- The Product Flow launch screenshot still used the larger startup screen before the user requested the smaller startup capture from the landing-page Alla Vostra Featured Case Studies card.
- The Alla Vostra hero still used the earlier project-page GitHub and Contact Dev action treatment and did not yet have the logo-only GitHub/App Store/GGL Play row requested during the August 1 pass.
- Cinerific already had a dedicated project page, but its hero actions did not yet share the new source-button stack or the corrected Prahlin/cinerific GitHub destination.
- Figma, Google Play, and Apple logo assets were not yet represented as local reusable public assets for the project-page source buttons.

Goals for August 1 Part 1

- Rebuild the Alla Vostra Product Flow diagram around Tutorial, Browse, Shop, Cart, Checkout, Payment, and Confirmed rails while preserving the existing neon-green visual language.
- Keep every subsection stack vertically centered inside its section and spread rows horizontally from the green section rail to the right diagram edge.
- Move Shop into its own standalone section between Browse and Cart without increasing Browse row height.
- Add Tutorial steps above Browse, wrap Step 1 through Step 5 into the requested two-row layout, and keep the logical arrow order intact even when visual direction changes.
- Remove standalone arrow triangles that do not have visible line bodies and redraw routes with attached down/right/left arrow paths.
- Replace the Product Flow launch screenshot with the small startup capture and tune portrait versus horizontal screenshot/diagram scaling.
- Rebuild Alla Vostra hero source actions into logo-only GitHub, App Store, and GGL Play buttons while leaving Contact Dev text visible.
- Copy the same source-button system to Cinerific, keeping Cinerific's middle source action as Figma and pointing GitHub to Prahlin/cinerific.

Work Completed - Alla Vostra Product Flow Diagram

- Preserved the transparent diagram background state so the portfolio grid continues to read through the flow canvas instead of returning to a darker section-band box.
- Added a new Tutorial section above Browse and finalized the section rail as the stacked TUTORIAL label treatment.
- Added Step 1, Step 2, Step 3, Step 4, and Step 5 subsection boxes, wrapped after Step 3, centered Step 4 and Step 5 between the two boxes above them, and preserved the Step 1-to-Step 5-to-Home arrow logic.
- Moved Shop out of Browse and into a separate Shop section between Browse and Cart, with the section itself named SHOP and the subsection box also named Shop.
- Reworked Browse so Home, Products, About Us, and Contact each route toward Shop or Cart with visible arrow bodies and attached arrowheads.
- Renamed About to About Us in the diagram and kept Browse row height stable by moving later

- subsection rows upward instead of enlarging the Browse band.
- Renamed Products Overlay to Selection and Cart Overlay to Cart, added a Cart-section Tutorial subsection, swapped Tutorial and Selection placement, and ensured Shop routes into all Cart-section destinations.
- Redrew cart and checkout routing so paths move left between section boxes, travel through the intended centerlines, and drop into the checkout contact row rather than relying on detached arrowheads.
- Expanded Payment from one subsection into Payment Method, Details Input, and Confirmation Prompt.
- Renamed the final confirmation output to Thank You / Order Confirmed and wrapped the Confirmed rail label as CONFIRM / ATION.
- Increased section-box fonts, widened section boxes, reduced the widened rail boxes by 20 percent, and tightened section-label line spacing for TUT/ORIAL, CHECK/OUT, PAY/MENT, and CONFIRM/ATION.
- Removed standalone triangle arrowheads that did not have visible route bodies, preserving only arrowheads attached to actual line paths.

Work Completed - Flow Pairing and Responsive Scaling

- Replaced the Product Flow launch screenshot source with startup_screen_small.png, matching the small startup screen already shown in the landing-page Alla Vostra Featured Case Studies card.
- Vertically centered the flow diagram during portrait/mobile view modes so the stacked product-flow composition reads as a balanced pair.
- Scaled the screenshot and diagram pairing upward until both reached the horizontal left-edge reference point of the Release Pipeline Awareness text zone.
- Scaled the startup screenshot until its width matched the flow diagram width in portrait/mobile stacked behavior.
- Added horizontal/wider-screen behavior that matches the flow diagram by height to the adjacent screenshot height, while portrait/mobile behavior continues matching width to width.
- Compressed the overall flow-diagram height by roughly 10 percent without changing diagram fonts, subsection box sizes, or arrow appearances.
- Kept the Browse row height unchanged through Tutorial and Shop additions by shifting later rows upward and tuning the SVG section rail spacing.
- Updated Alla Vostra page and global CSS rules so the screenshot/diagram composition responds differently for portrait and horizontal aspect ratios without affecting unrelated project pages.

Work Completed - Alla Vostra Hero Source Buttons

- Reduced the original Alla Vostra GitHub button into a narrower source-control role and added a second project source button beside it during the early Figma pass.
- Added the purple Figma button with black borders, matching text face/size, Contact Dev-style layered stroke treatment, and a local Figma logo asset while Figma was still part of the Alla Vostra hero.
- Tuned button gaps to match the landing-page CTA/social-button rhythm, then added the Google Play source button as a third project-store action.
- Removed View from source-button labels, iterated Play Store through Play and GGL Play wording, and tuned icon-to-text spacing before the final logo-only direction.
- Moved the source-button treatment into shared project-page CSS classes, including project-source-actions, icon-only button sizing, source icon classes, and responsive three-column behavior.
- Replaced Alla Vostra's Figma source button with an App Store button only on the Alla Vostra page, keeping the same sizing and alignment rules used by Google Play.

- Added a local Apple logo SVG asset, inverted the App Store button into a light surface with black Apple artwork, and scaled the Apple mark inside the button without expanding the button box.
- Added a transparent Google Play triangle PNG asset, removed the white backing, tuned the triangle size downward, and thickened the black stroke treatment to the accepted weight.
- Settled the Google Play button fill on Google red after several color passes, then converted the Alla Vostra GitHub, App Store, and GGL Play buttons to logo-only controls with aria-labels.
- Preserved the Contact Dev button text and contact CTA role, explicitly keeping it outside the logo-only source-button treatment.

Work Completed - Cinerific Hero Source Buttons and Assets

- Copied the accepted four-button stack pattern from Alla Vostra to the Cinerific project page so Cinerific now uses the same source row plus Contact Dev hero action structure.
- Corrected the Cinerific GitHub source link to <https://github.com/Prahlincinerific> and kept the lower Cinerific GitHub CTA aligned to the same repository target.
- Added a Cinerific playStoreUrl constant pointing at the com.prahlincinerific Google Play package path used by the new source button.
- Kept Cinerific's middle source button as Figma after Alla Vostra moved from Figma to App Store, preserving page-specific source meaning while sharing the same button system.
- Added a local ProjectGitHubMark SVG function in the Cinerific page so the Cinerific hero can match the project-page GitHub mark style used by Alla Vostra.
- Applied the same logo-only treatment to Cinerific's GitHub, Figma, and GGL Play buttons while keeping Cinerific Contact Dev text untouched.
- Added public/images/figma-logo-official.svg, public/images/apple-logo-official.svg, and public/images/google-play-official-triangle.png as local reusable assets for the project source controls.

Work Completed - Commit Handling and Local State

- Committed and pushed 22aab85, Refined Alla Vostra product flow presentation, covering the small startup screenshot swap, screenshot/diagram scaling behavior, Tutorial/Shop/Cart/Payment/Confirmed diagram restructuring, subsection typography normalization, and project snapshot regeneration.
- Committed and pushed a796e3d, feat(projects): refreshed app store hero CTAs across case studies, covering the logo-only Alla Vostra source row, App Store replacement, Google Play/Figma/Apple assets, shared source-button CSS, Cinerific button-stack parity, Cinerific GitHub correction, and final npm run check verification.
- Confirmed HEAD and origin/main both resolved to a796e3d1a70559433c4e8d5062426c0f76212681 before this PDF was generated.
- Regenerated portfolio_PROJECT_SNAPSHOT.txt again for this worklog pass. That snapshot remains a local modified documentation artifact after the source commits.
- Kept this August 1 Part 1 PDF local as a documentation artifact pending any later user-approved documentation commit.
- Did not edit external Alla Vostra, Cinerific Android, Credit King, Figma, App Store, or Google Play source repositories during this worklog pass.

Validation and Checks Performed

- Ran npm run check after the current August 1 source state and confirmed TypeScript validation passed with tsc --noEmit.
- Confirmed <http://127.0.0.1:3000/>, <http://127.0.0.1:3000/projects/alla-vostra>, and <http://127.0.0.1:3000/projects/cinerific> each returned HTTP 200 OK from the running local

Next.js development server.

- Ran `npm run build:static` and confirmed the local Next.js static export completed successfully, compiling, running TypeScript, collecting page data, generating six static pages, and listing `/`, `/articles`, `/projects/alla-vostra`, and `/projects/cinerific` as static routes.
- Restored `next-env.d.ts` after `npm run build:static` flipped the generated route-types import from the dev path to the static-build path, avoiding unrelated generated-file noise in the working tree.
- Checked GitHub Actions with `gh run list`. The latest Build static export for Hostinger workflow runs for `a796e3d` and `22aab85` completed with failure status, matching the fast-failure pattern already visible in recent workflow history.
- Distinguished remote workflow status from local project health: `npm run check` and `npm run build:static` both passed locally, while the remote Hostinger static-export workflow still needs separate GitHub-side investigation.
- Checked git status before PDF generation and confirmed the only tracked local modification was the refreshed `portfolio_PROJECT_SNAPSHOT.txt` produced by `./read_project.sh`.
- Generated this PDF with a small standard-library PDF writer and checked metadata/text extraction after writing.

Files Touched During August 1 Part 1 Portfolio Work

- `app/globals.css` - tuned Product Flow screenshot/diagram pairing, responsive width-versus-height matching, project source-action grids, logo-only button behavior, source-button fills, icon sizing, hairline/stroke effects, Contact Dev preservation, mobile source-button behavior, and App Store / Google Play / Figma button classes.
- `app/projects/alla-vostra/page.tsx` - replaced the Product Flow startup screenshot with the small asset, added App Store and Google Play URLs, rebuilt the hero source row as logo-only GitHub/App Store/GGL Play actions, kept Contact Dev text intact, and wired accessible labels for logo-only buttons.
- `app/projects/cinerific/page.tsx` - added Cinerific Google Play URL handling, corrected GitHub routing to Prahlin/cinerific, added the local GitHub mark, copied the shared source-action row into the hero, kept Figma as the Cinerific middle source action, and switched the source row to logo-only buttons.
- `public/images/alla-vostra-product-flow-mockup.svg` - reworked the diagram sections, rerouted arrows, renamed subsection boxes, normalized typography/padding, updated section rail labels, removed unattached triangle arrows, and compressed/scaled the overall flow visual.
- `public/images/apple-logo-official.svg` - added the local Apple logo mark used by the Alla Vostra App Store source button.
- `public/images/figma-logo-official.svg` - added the local cropped Figma logo mark used by the Cinerific source button and earlier Figma treatment.
- `public/images/google-play-official-triangle.png` - added the transparent Google Play triangle artwork used by Google Play source buttons.
- `portfolio_PROJECT_SNAPSHOT.txt` - regenerated by `./read_project.sh` for current source context and left modified locally after this documentation pass.
- `portfolio_worklog_august1_part1.pdf` - generated as this August 1 Part 1 Portfolio worklog artifact in the root-level Portfolio worklog convention.

Follow-Up Context

- The public source branch is already represented by `origin/main` at `a796e3d`, and the August 1 source commits have been pushed to main.
- The refreshed `portfolio_PROJECT_SNAPSHOT.txt` and this August 1 Part 1 PDF remain local until the user provides or approves a commit message for documentation artifact changes.
- The latest Hostinger static-export GitHub Actions runs are still failing quickly even though

local npm run check and npm run build:static pass. The next deployment-health pass should inspect GitHub-side workflow logs, token/branch permissions, checkout/setup steps, or publishing conditions instead of assuming a local build failure.

- Future Product Flow diagram edits should preserve the new Tutorial > Browse > Shop > Cart > Checkout > Payment > Confirmed structure, the separated Shop section, centered subsection rows, and no-detached-triangle arrow rule.
- Future screenshot/diagram sizing work should preserve the current responsive distinction: portrait/mobile layouts match screenshot and diagram by width, while wider horizontal layouts match flow diagram height to screenshot height.
- Alla Vostra now uses GitHub, App Store, and GGL Play as logo-only source buttons; Cinerific uses GitHub, Figma, and GGL Play. Future cross-page source-button work should preserve that page-specific middle-button difference unless the user asks for parity.
- Contact Dev remains text-visible on both project pages and was intentionally not included in the logo-only treatment.
- The Google Play triangle now relies on a transparent PNG plus CSS stroke/drop-shadow treatment. Future resizing should test both Alla Vostra and Cinerific buttons because they share the same asset and classes.
- Continue treating future Portfolio work as local-only unless the user explicitly asks to commit, push, deploy, publish, or update the public website.

Output Artifact

- Generated file: portfolio_worklog_august1_part1.pdf.
- Location: /Users/prahlin/gh/portfolio/portfolio_worklog_august1_part1.pdf.
- Naming follows the existing root-level Portfolio convention and the prior part-number convention: portfolio_worklog_august1_part1.pdf.
- Uses the same daily worklog structure and compact technical voice established by portfolio_worklog_july11.pdf through portfolio_worklog_july31.pdf.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this artifact.
- The local project date used for this filename and title is Saturday, August 1, 2026 EDT, matching the machine and repository work-session clock.
