

Prahlín Portfolio Work Log - August 1, 2026 (Part 2)

Compiled summary for Saturday, August 1, 2026 - Part 2 - focus: replacing the remaining Portfolio smartphone mockups with real photographic device frames after the August 1 Part 1 flow-diagram and source-button pass, including Alla Vostra hero device-frame replacement, dark Space Gray short-device frames, landing-page upright smartphone frame replacement, removal of the old outer CSS phone shell from image-backed landing hero phones, local validation, deployment-status review, refreshed project snapshot context, review of all prior Portfolio PDF worklogs, and generation of the August 1 Part 2 Portfolio PDF worklog.

Generated in continuity with the established Prahlín Portfolio daily worklog cadence:

compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahlín/portfolio work performed after `portfolio_worklog_august1_part1.pdf` and after the August 1 Part 1 source commits. The committed source state reviewed for this record is `1f903dca1c38e617ad23641a46c199b52488d76a` on main, matching origin/main before this PDF was generated. Alla Vostra, Cinerific, Credit King, Figma, App Store, and Google Play external repositories were not changed for this record.

Source Materials Reviewed

- Ran `./read_project.sh` from `/Users/prahlin/gh/portfolio` and regenerated `portfolio_PROJECT_SNAPSHOT.txt` before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed `portfolio_PROJECT_SNAPSHOT.txt`, including project notes, current source tree, line-numbered source dumps, public asset inventory, PDF inventory, tooling/deployment configuration, git context, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF: `portfolio_worklog_july11.pdf`, `portfolio_worklog_july14.pdf`, `portfolio_worklog_july15_part1.pdf`, `portfolio_worklog_july15_part2.pdf`, `portfolio_worklog_july16.pdf`, `portfolio_worklog_july19.pdf`, `portfolio_worklog_july20.pdf`, `portfolio_worklog_july21.pdf`, `portfolio_worklog_july22.pdf`, `portfolio_worklog_july23.pdf`, `portfolio_worklog_july24.pdf`, `portfolio_worklog_july25.pdf`, `portfolio_worklog_july29.pdf`, `portfolio_worklog_july30.pdf`, `portfolio_worklog_july31.pdf`, and `portfolio_worklog_august1_part1.pdf`.
- Extracted representative text with `pdftotext` and used `portfolio_worklog_august1_part1.pdf` as the closest same-day structural baseline, while also comparing `portfolio_worklog_july30.pdf` as the mature six-page daily-reference format and `portfolio_worklog_july31.pdf` as the compact two-page follow-up reference.
- Checked prior PDF metadata with `pdftinfo` and preserved the same root-level naming, letter page size, PDF 1.4 output, Codex author/creator metadata, title cadence, and Helvetica-style base-font convention.
- Reviewed git history through `git log`, `git show --stat`, `git show --name-status`, branch state, and the committed scope for `1f903dc`. HEAD and origin/main both resolved to `1f903dc` before this PDF was generated.
- Reviewed `app/page.tsx`, `app/globals.css`, `app/projects/alla-vostra/page.tsx`, the new public device-frame PNGs, `portfolio_worklog_august1_part1.pdf`, `read_project.sh`, `package.json`, and the root-level PDF inventory.
- Reviewed frame-source context from the August 1 device-frame pass: WithFrame-generated Pro Max outputs, WithFrame iPhone 8 Plus frame colorways, transparent PNG shell behavior, and the template-screen dimensions used to fit the Alla Vostra screenshots

without stretching the app UI.

- Checked local routes at `http://127.0.0.1:3000/`, `/projects/alla-vostra`, and `/projects/cinerific`, then checked `gh run list` for the latest Hostinger workflow state.

Baseline Status Before August 1 Part 2 Work

- August 1 Part 1 had already documented the Alla Vostra Product Flow diagram restructuring, Tutorial/Browse/Shop/Cart/Checkout/Payment/Confirmed routing, screenshot/diagram responsive pairing, logo-only source buttons, Cinerific source-button parity, and August 1 Part 1 PDF generation.
- After that pass, the project still had device-frame work to resolve. The Alla Vostra project hero had used CSS-drawn phone shells, and the user rejected the sleeker CSS-only frame attempt because it still read as the same old artificial device treatment.
- The Alla Vostra hero contained a tall 1440 x 3120 startup screenshot and two short 720 x 1280 screenshots. Matching those screenshots required real frame assets with different screen aspect ratios rather than forcing a single generic shell across all images.
- The initial real-frame replacement needed a dark version for the two short devices, because the light/silver iPhone 8 Plus fronts created too much contrast against the green Portfolio hero background.
- The landing page hero still carried older CSS-framed upright smartphone mockups around the Cinerific tablet composition. The user wanted the large smartphone frames there to match the accepted Alla Vostra large Pro Max treatment while leaving the tablet frame untouched.
- One landing-page iteration still showed a visible old outer phone shell around a real framed image, creating a double-frame appearance. The image-backed phone rendering path needed to stop nesting framed PNG mockups inside the old phone-speaker and phone-screen DOM structure.
- The remote Hostinger static-export workflow was already known to fail quickly even though local TypeScript and static export checks passed. That split remained part of the deployment-health baseline.

Goals for August 1 Part 2

- Replace the Alla Vostra project-page hero device frames with exact photographic-real device-frame assets sourced from the web, matching the screenshot aspect-ratio constraints rather than reusing CSS-drawn shells.
- Use a modern Pro Max-class frame for the tall Alla Vostra startup screenshot and an iPhone 8 Plus-class frame for the 9:16 short screenshots, because the short products and confirmation screenshots match the iPhone 8 Plus screen ratio.
- Switch the two short Alla Vostra hero frames from the bright silver/light front to a dark iPhone 8 Plus Space Gray treatment while preserving the same screenshot crop and output dimensions.
- Apply the same large Pro Max photographic frame treatment to the landing page hero upright smartphones, while explicitly leaving the tablet frame unchanged for this pass.
- Remove the old outer phone-shell structure from image-backed landing hero phones so framed PNG mockups render as the final device surface and do not sit inside a second CSS frame.
- Keep the local development server healthy on `127.0.0.1:3000`, validate project routes, run `npm run check` and `npm run build:static`, and restore generated `next-env.d.ts` noise after static export.
- Generate `portfolio_worklog_august1_part2.pdf` in the established root-level Portfolio worklog format after studying all pre-existing worklogs.

Work Completed - Photographic Device Frame Sourcing

- Located and evaluated real transparent/photographic device-frame assets from web sources instead of continuing with locally drawn CSS shells. The accepted source path used WithFrame frame/generator output and frame metadata to build final PNG mockups.
- Verified the screenshot dimensions before framing: startup_screen_large.png is 1440 x 3120, while products_screen_small.png and confirmed_overlay_small.png are each 720 x 1280.
- Matched the tall startup screenshot to a Pro Max-class WithFrame output, generating public/images/alla-vostra-hero-startup-framed.png at 1290 x 2661 with a real photographic frame around the live app screen.
- Matched the two short 9:16 screenshots to the iPhone 8 Plus screen class, using the 1242 x 2208 screen target and generating final 1242 x 2567 mockups for the products and confirmation screenshots.
- Confirmed that the two short devices should be Apple iPhone 8 Plus and answered the model question directly before changing them from the first light/silver treatment to a dark colorway.
- Generated and checked true Space Gray short-frame composites after the first WithFrame color request still returned a white-front device. The accepted dark assets became public/images/alla-vostra-hero-products-framed-space-gray.png and public/images/alla-vostra-hero-confirmed-framed-space-gray.png.
- Used the dark transparent iPhone 8 Plus Space Gray shell over the already fitted app screenshots so the app crop, screen dimensions, and output size stayed stable while only the visible hardware color changed.
- Generated public/images/landing-hero-finance-framed.png at 1290 x 2661 so the landing page right-hand upright phone could use the same Pro Max output dimensions as the Alla Vostra large frame.

Work Completed - Alla Vostra Hero Device Frames

- Simplified the Alla Vostra CasePhone rendering path in app/projects/alla-vostra/page.tsx so hero devices now render the final framed mockup image directly instead of building a CSS speaker, screen, and inset screenshot stack.
- Changed the Alla Vostra hero startup device source from /images/startup_screen_large.png to /images/alla-vostra-hero-startup-framed.png.
- Changed the short Alla Vostra products and confirmation hero device sources to /images/alla-vostra-hero-products-framed-space-gray.png and /images/alla-vostra-hero-confirmed-framed-space-gray.png.
- Removed the old Alla Vostra-specific CSS device shell treatment from app/globals.css: fake metallic gradients, inset bevels, side-button pseudo-elements, speaker bars, screen overlays, and stale border-radius overrides no longer participate in the Alla Vostra hero frames.
- Added explicit aspect ratios for Alla Vostra framed devices: 1290 / 2661 for the tall Pro Max mockup and 1242 / 2567 for the short Space Gray iPhone 8 Plus mockups.
- Kept the accepted Alla Vostra hero composition, rotations, proof-card overlap, and mobile behavior intact while changing the device artwork from CSS shells to real framed PNGs.
- Verified the project page visually with fresh Chrome screenshots and corrected the early collapsed-image issue by applying direct aspect-ratio rules to the device wrappers.

Work Completed - Landing Page Hero Smartphones

- Updated the landing page Alla Vostra upright phone to use the same public/images/alla-vostra-hero-startup-framed.png asset as the Alla Vostra project-page large hero device.

- Generated and wired the second landing-page upright smartphone to `public/images/landing-hero-finance-framed.png` so both large landing hero phones use the same Pro Max-style photographic frame family.
- Left the Cinerific-style horizontal tablet frame untouched, preserving the user-requested tablet exception while changing only the upright smartphone treatments.
- Generalized the landing hero image-backed phone CSS so `.phone-shell-capture` stops drawing the old gradient shell, fake side buttons, speaker, inset screen, and shine overlay around real framed PNGs.
- Reworked the PhonePreview image-backed branch in `app/page.tsx` so framed mockups render as a direct Image with class `phone-framed-image`, rather than being nested inside `phone-speaker`, `phone-screen`, and `phone-screen-image-frame` elements.
- Removed the double-frame problem shown by the user screenshot: the real phone PNG now supplies the only smartphone frame, and the old outer CSS frame is no longer present in the image-backed landing hero path.
- Kept `non-image/generated` phone UI logic available for any future PhonePreview instances that do not pass `screenImageSrc`, so the cleanup stays scoped to the hero mockup use case.

Work Completed - Commit, Snapshot, and Documentation State

- Committed and pushed `1f903dc`, Refined portfolio device mockups and August worklog, covering the Alla Vostra photoreal hero frames, dark Space Gray short devices, landing-page smartphone frame replacement, Part 1 worklog PDF, and refreshed project snapshot.
- Confirmed HEAD and origin/main both resolved to `1f903dca1c38e617ad23641a46c199b52488d76a` before generating this Part 2 worklog.
- Regenerated `portfolio_PROJECT_SNAPSHOT.txt` again immediately before this PDF, preserving the Portfolio convention that documentation passes begin from a fresh source snapshot.
- Observed that the working tree showed only `portfolio_PROJECT_SNAPSHOT.txt` modified after snapshot refresh and before this PDF was written. No source-code files were dirty during the Part 2 PDF generation step.
- Generated this August 1 Part 2 PDF as a new local documentation artifact after the user requested the latest same-day follow-up worklog.

Validation and Checks Performed

- Ran `npm run check` after the current August 1 Part 2 source state and confirmed TypeScript validation passed with `tsc --noEmit`.
- Confirmed `http://127.0.0.1:3000/`, `http://127.0.0.1:3000/projects/alla-vostra`, and `http://127.0.0.1:3000/projects/cinerific` each returned HTTP 200 OK from the running local Next.js development server.
- Ran `npm run build:static` and confirmed the local Next.js static export completed successfully, compiling, running TypeScript, collecting page data, generating six static pages, and listing `/`, `/articles`, `/projects/alla-vostra`, and `/projects/cinerific` as static routes.
- Restored `next-env.d.ts` after `npm run build:static` flipped the generated route-types import from the dev path to the static-build path, avoiding unrelated generated-file churn in the final local state.
- Captured fresh Chrome screenshots during the device-frame pass for the Alla Vostra hero and landing page hero across desktop and mobile viewports, then used those renders to catch and correct collapsed framed images, stale optimized images, and the old outer-shell double-frame issue.
- Checked `gh run list` after commit `1f903dc`. The latest Build static export for Hostinger workflow still completed with failure status in about six seconds, continuing the known

remote deployment failure pattern even though local check and static export passed.

- Checked PDF metadata/text extraction conventions with pdfinfo and pdftotext before generating this artifact.

Files Touched During August 1 Part 2 Portfolio Work

- app/page.tsx - switched landing hero image-backed phones to framed mockup assets and simplified PhonePreview so framed mockups render as direct images instead of nested old phone-shell screens.
- app/globals.css - removed old image-backed phone shell visuals, added direct framed-image styling, added Alla Vostra framed-device aspect ratios, removed fake device gradients/speakers/side-button overlays, and preserved tablet-specific styling.
- app/projects/alla-vostra/page.tsx - changed CasePhone to direct framed image rendering and updated Alla Vostra hero sources to the photoreal startup, products, and confirmation mockup PNGs.
- public/images/alla-vostra-hero-startup-framed.png - added the Pro Max-style photographic Alla Vostra startup hero device mockup.
- public/images/alla-vostra-hero-products-framed-space-gray.png - added the dark Space Gray iPhone 8 Plus framed Alla Vostra products hero mockup.
- public/images/alla-vostra-hero-confirmed-framed-space-gray.png - added the dark Space Gray iPhone 8 Plus framed Alla Vostra confirmation hero mockup.
- public/images/landing-hero-finance-framed.png - added the Pro Max-style framed landing hero finance/right-upright smartphone mockup.
- portfolio_PROJECT_SNAPSHOT.txt - refreshed by ./read_project.sh before the Part 2 PDF generation step.
- portfolio_worklog_august1_part1.pdf - added in commit 1f903dc as the prior same-day PDF artifact documented by this follow-up.
- portfolio_worklog_august1_part2.pdf - generated as this latest August 1 Part 2 Portfolio worklog artifact.

Follow-Up Context

- The source branch is currently represented by main and origin/main at 1f903dc. This Part 2 PDF and the refreshed snapshot are local documentation artifacts until the user requests or approves a documentation commit.
- The landing page tablet frame was intentionally left unchanged. Future tablet-frame work should be treated as a separate visual request rather than bundled with the smartphone-frame cleanup.
- The accepted pattern for image-backed Portfolio hero phones is now direct framed PNG rendering. Future phone-frame edits should avoid reintroducing the old CSS phone shell around already framed assets.
- Alla Vostra large startup uses the Pro Max-style framed mockup; Alla Vostra short products and confirmation use dark iPhone 8 Plus Space Gray framed mockups because their screenshots are 9:16.
- The local project health is good: npm run check, npm run build:static, and local route checks passed. The Hostinger GitHub Actions workflow still fails remotely and should be debugged independently from local source correctness.
- Continue treating future Portfolio source, PDF, and snapshot changes as local-only unless the user explicitly asks to commit, push, deploy, publish, or update the public website.

Output Artifact

- Generated file: portfolio_worklog_august1_part2.pdf.

- Location: /Users/prahlin/gh/portfolio/portfolio_worklog_august1_part2.pdf.
- Naming follows the existing root-level Portfolio convention and the established part-number convention: portfolio_worklog_august1_part2.pdf.
- Uses the same daily worklog structure and compact technical voice established by portfolio_worklog_july11.pdf through portfolio_worklog_august1_part1.pdf.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this artifact.
- The local project date used for this filename and title is Saturday, August 1, 2026 EDT, matching the machine and repository work-session clock.
