

Prahl Portfolio Work Log - October 1, 2026

Compiled summary for Thursday, October 1, 2026 - focus: continuing the Prah.dev Portfolio after the September 29 Part 2 Core Beliefs, workflow-imagery, and proof-count record, verifying the United States Eastern date, running the customary project reader, extracting and studying all forty-five pre-existing Portfolio PDF worklogs, preserving the local Next.js preview, refining the landing hero product quote with EB Garamond italic typography and responsive headline-linked scaling, tuning its copy, quotation marks, line spacing, curve-aware row protrusion, color, and placement, lowering the portrait device stack without disturbing the protected proof regions, inspecting the Cinerific Android repository read-only, importing its chrome and navigation icons, adding source-matched tablet and phone bottom navigation, building expanded HOME-active vertical navigation rails, recreating the Movies genre and view-mode controls with interactive selected states, normalizing the showcase widths and comparison scales, validating TypeScript and browser-rendered geometry, documenting committed source state ab25f85, refreshing the Portfolio project snapshot, and generating the October 1 Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after portfolio_worklog_september29_part2.pdf and its documentation commit d4df015. The source work is represented by commits eabfb7c and ab25f85 on main, matching origin/main before this PDF was generated. Together they changed the landing route, shared layout and styling, the Cinerific ProductFlowSwitcher, project navigation assets, and committed design-validation imagery. No Hostinger deploy-branch work, static production publish, GitHub Actions dispatch, or public deployment was performed during this record. The documentation deltas created by this generation pass are the refreshed portfolio_PROJECT_SNAPSHOT.txt file and this root-level October 1 PDF worklog.

Source Materials Reviewed

- Verified the United States Eastern date through an independent UTC-04:00 time check, which reported October 1, 2026 at 8:15 PM. October 1 remains within Eastern Daylight Time, so this record uses Thursday, October 1, 2026 rather than relying on a host or UTC calendar date.
- Ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt before composing this record, preserving the established source, asset, configuration, Git, PDF-inventory, and workflow-context capture practice.
- Extracted and studied all forty-five pre-existing root-level Portfolio PDF worklogs with pdftotext: fifteen July records, fifteen August records, and fifteen September records through portfolio_worklog_september29_part2.pdf. Before this artifact, the series contained 262 PDF pages and approximately 125,083 extracted words.
- Compared the complete record set for filename cadence, same-day Part suffix behavior, title construction, opening-summary density, source and baseline framing, technical bullet voice, validation language, files-touched treatment, follow-up continuity, dated page footers, and output-artifact closure.
- Used September 29 Part 2 as the direct chronological baseline, September 29 Part 1 for the landing hero quote and device-stack origin, September 27 for the first complete Cinerific UI Foundations system, September 26 for the Cinerific switcher and flow diagram, and the August 3 through August 14 records for the mature UI Foundations grouping and responsive asset-presentation conventions.
- Checked pdfinfo, pdffonts, and a rasterized first-page reference against the mature series. The established artifact remains US Letter at 612 x 792 points, PDF 1.4, Helvetica and Helvetica-Bold, no encryption, Codex metadata, dense black-on-white technical copy, and a repeated dated page footer.
- Reviewed commits eabfb7c and ab25f85 through git log, git show, commit bodies, file statistics, branch tracking, and the refreshed snapshot. Confirmed main and origin/main resolve to ab25f85, titled Added interactive Cinerific UI foundation controls.
- Reviewed app/layout.tsx, app/page.tsx, app/globals.css, app/projects/cinerific/ProductFlowSwitcher.tsx, the copied Cinerific navigation assets, all committed quote mockups and validation screenshots, and the current local routes carrying the October 1 work.
- Inspected /Users/prahlin/gh/cinerific read-only for the current Compose implementations in CinerificRightSideNavBar.kt, CinerificViewportGenreNav.kt, CinerificViewportModeNav.kt, CinerificViewportNavBar.kt, CinerificViewportNavShared.kt, and CinerificChrome.kt. The pre-existing CinerificIntroView.kt modification remained untouched.

Baseline Status Before October 1 Work

- The September 29 Part 2 state had finalized the five-bubble Core Beliefs composition, the seven-stage image-backed workflow, and remote project proof counts, but the landing hero quote still used the earlier sans-serif treatment, muted color, stretched rows, smaller quotation marks, and preliminary placement.
- The quote copy used a period between idea and Few, and its row widths were forced with horizontal scaling. That approach created uneven perceived kerning and did not follow the circular profile portrait as naturally as intended.
- Portrait hero modes still held the three-device composition too high inside the available lower space. Any correction needed to leave the Vercel/EAS/Stripe/Postmark/GGL Play/App Store proof panel and the 3yrs/1.0k/0.2k/8 stats strip undisturbed.
- The Cinerific UI Foundations page already contained colors, typography, spacing, logos, avatars, title cards, and an animated loading spinner, while Navigations and Controls & Inputs still lacked the actual app navigation and Movies-screen controls.
- The sibling Cinerific repository contained the authoritative Android Compose geometry and raster icon assets. It also contained an unrelated local modification in CinerificIntroView.kt that had to be preserved without edits.

Goals for October 1

- Replace the quote's informal or overly playful font exploration with a professional, classic, easily legible Garamond direction and implement the accepted version directly on the landing page.
- Synchronize quote scaling with the main Full-Stack React Native / Kotlin Developer headline, refine the exact three-row copy, equalize natural letter spacing, enlarge and independently position the opening and closing quotation marks, and follow the portrait curve without distorting glyphs.
- Lower the portrait device composition through the two narrowest portrait modes while protecting the proof-panel and stat-strip spacing requested by the user.
- Bring the current Cinerific navigation and Movies controls into the Cinerific project page from read-only source inspection, place each item under the correct UI Foundations category, and preserve real product dimensions, selected states, icon alignment, and responsive behavior.
- Present tablet and phone bottom navigation, genre selection, view-mode selection, and expanded vertical rails at consistent foundation widths and comparison scales, then verify interaction and layout across desktop and narrow viewports.

Work Completed - Landing Hero Quote Typography and Copy

- Generated six visual font mockups covering Caveat, Kalam, Patrick Hand, EB Garamond, Cormorant Garamond, and Libre Baskerville. After the handwriting candidates were rejected as too childish or unprofessional, the classic serif options established the accepted direction and EB Garamond was selected.
- Added the italic 500-weight EB Garamond face through next/font/google in app/layout.tsx and exposed it as --font-eb-garamond on the document body, keeping the font scoped through a reusable CSS variable rather than introducing a route-specific external stylesheet.
- Rewrote the quote to: Everyone's got a brilliant idea; Few know how to funnel it into a must-have product. The semicolon and requested capitalization are represented in the final three-row DOM structure.
- Changed the quote from the muted palette to the same --text white used by the landing headline, set the italic weight to 500, and tuned the accepted line-height separately for wide and compact presentations.
- Introduced shared --hero-headline-font-size and --hero-quote-font-size variables so the quote resizes in concert with the main headline. Added a dedicated 23px second-narrowest portrait value and narrower clamp values for mobile portrait modes.

Work Completed - Quote Geometry and Portrait Composition

- Replaced row-specific scaleX stretching with natural max-content rows inside an 80/20 three-column grid. This preserved equal kerning across all three lines while placing eighty percent of the available horizontal space to the quote's left and twenty percent to its right.
- Added a shared responsive curve protrusion and shifted the first and third rows slightly right, allowing the three-line block to echo the adjacent profile bubble without changing the center row or forcing artificial letter spacing.
- Separated both quotation marks into independently styled inline spans, enlarged them to three times the surrounding type, lowered the closing mark beneath product to prevent clipping, and moved the opening mark substantially left and down for the requested symmetry.
- Moved the full quote slightly down after the earlier upward pass and increased line spacing again. The final wide and compact variants share the same typographic system while retaining route-specific anchoring to the profile-photo center.

- Lowered the portrait phone/tablet composition with isolated transforms: 60px for the second-narrowest portrait range and 65px for the narrowest portrait range. The proof-service panel and the four metric stacks were deliberately left in place.
- Kept the quote from shrinking in the second-narrowest portrait range by assigning the accepted 23px size, preserving the stronger Pic 1 treatment rather than the undersized Pic 2 behavior supplied during review.

Work Completed - Cinerific Source Review and Asset Transfer

- Read the current Cinerific Compose navigation and viewport-control code without writing to the sibling repository. Rechecked Cinerific status repeatedly; the only visible source change remained the user's pre-existing CinerificIntroView.kt modification.
- Copied the current chrome fill plus Home, Movies, Shows, Favorites, and Settings raster icons into public/images/cinerific/ui-foundations/navigation. The source files remained in place and unchanged.
- Translated Compose measurements rather than approximating from screenshots. The implementation carries the product's selected silver, inactive gray, aubergine chrome, opacity, border, icon-box, line-height, featured-icon scale, and responsive coordinate relationships into browser-native controls.
- Added semantic navigation and grouped-button labels, aria-current or aria-pressed state, keyboard-focus outlines, pointer feedback, and independent React state so the foundation examples remain demonstrable rather than static artwork.

Work Completed - Bottom Navigation Variants

- Added separate Tablet Bottom Navigation and Phone Bottom Navigation examples under UI Foundations / Navigations. Both contain the five current destinations and begin with HOME selected at full opacity while inactive destinations use the product's reduced opacity.
- Preserved the existing tablet interpretation while rebuilding the phone variant from CinerificRightSideNavBar.kt: 360 x 67.068 content proportions, a 52.488dp item box, a 28.431dp icon slot, code-derived icon widths and heights, a 1.21 featured scale for Movies, Shows, and Favorites, and the correct per-icon vertical offsets.
- Replaced equal grid-column placement in the phone example with the source Row's SpaceEvenly distribution. Browser checks confirmed destination centers near 42.5, 111.25, 180, 248.75, and 317.5 at the 360px reference width, matching the Compose arrangement.
- Aligned all phone labels to one baseline while allowing each icon's real bottom relationship to vary according to its source dimensions and feature scaling. The resulting icon-to-label distances now follow the Android layout rather than a common masked square.
- Normalized both bottom-bar examples to the established Manrope/Broadway font-stack width: 318px on desktop, 304px at a 390px viewport, and approximately 297.6px at a 340px viewport. Internal geometry scales with each responsive width.

Work Completed - Genre and View-Mode Controls

- Added Genre Navigation and View Mode to UI Foundations / Controls & Inputs after correcting the initial category placement. Navigations now contains navigation systems; the two Movies-screen selectors sit together under their actual control role.
- Recreated the eight square genre chips for All, Action, Comedy, Crime, Documentary, Drama, Horror, and Thriller. The All chip uses the exact framed 3 x 3 cell glyph; the seven text chips use the compact ACT, COM, CRI, DOC, DRA, HOR, and THR labels.
- Matched the genre group's 160.464 x 77.913 source coordinate system, 37.101 square chips, 2.707 corner radius, 1.805 stroke, 29.681 All glyph, 3.9 cells, 1.8 gaps, selected fill, inactive panel color, and responsive Manrope sizing.
- Recreated the Large Collage, Small Collage, and List view-mode buttons from the 190 x 58 source group. The 54.692 square buttons, 39.462 selected inset frame, cell dimensions, gaps, list dots and bars, inactive borders, and selected compact-glyph scaling follow CinerificViewportModeNav.kt.
- Corrected the initially undersized nested glyphs by moving from arbitrary pixel values to source-coordinate ratios. Browser measurements confirmed square parent controls and expected scaled dimensions for the All glyph, 2 x 2 cells, 3 x 3 cells, list dots, list bars, and selected inset frame.
- Set the genre stack to the default 318px foundation width and enlarged/recentered the View Mode canvas until its visible first-to-last button span matched the genre stack. Narrow-width rules continue to track the responsive two-card typography width.

Work Completed - Expanded Vertical Navigation Rails

- Added tablet and phone landscape vertical-rail examples from the expanded branch of CinerificRightSideNavBar.kt. Both render the entire purplish chrome rail, begin with HOME active, keep inactive destinations at 0.58 opacity, and anchor Settings independently at the bottom.

- Mapped the source rail constants for the 115dp width, top toggle geometry, 75dp icon-center cadence, per-destination icon boxes, fixed 10sp labels, and bottom edge gap. The phone version retains the current code's intentionally fixed label sizing relative to its smaller rail.
- Derived the tablet reference from the 1194 x 834 stage and the phone reference from the connected 780 x 360dp landscape profile. Before presentation normalization, these resolved to 115 x 834 and approximately 49.6 x 360 respectively.
- Combined the variants into one side-by-side 318px comparison with equal columns and explicit Tablet and Phone captions instead of placing them in separate vertically ordered foundation groups.
- Applied uniform presentation transforms so the tablet rail scales down and the phone rail scales up to the same 600px displayed height. The transform preserves each source rendering's internal relationships, including the phone's fixed-label behavior, while making vertical comparison immediate.

Work Completed - Cache Handling and Local Continuity

- Cleared and rebuilt generated .next state when Turbopack repeatedly served pre-change CSS despite successful component hot reloads. Each rebuild was followed by computed-style checks rather than relying only on source-file inspection.
- Removed only the temporary generated Next.js cache copies created during those refreshes after the workspace volume became nearly full. No source files, copied product assets, worklogs, or user data were deleted.
- Kept the local Next.js preview available at <http://localhost:3000> and repeatedly checked `/projects/cinerific` for HTTP 200 responses. No production deployment or remote repository mutation was introduced.

Committed Source Sequence

- eabfb7c - Refined Landing Hero Quote and Portrait Layout. Added EB Garamond italic, revised quote markup and copy, synchronized responsive quote/headline scaling, refined quotation-mark geometry and natural row spacing, and moved the portrait device stage downward while protecting proof content.
- ab25f85 - Added interactive Cinerific UI foundation controls. Added the copied navigation assets, interactive bottom bars, genre and view-mode controls, expanded vertical rails, source-measured responsive styling, and the committed validation captures accumulated during implementation.
- The two commits form one coherent presentation pass: the landing hero received its accepted typographic quote treatment and portrait balance, while the Cinerific case study gained real interactive product controls in the previously incomplete foundation categories.

Validation Summary

- Ran `npm run check` repeatedly after the React and CSS additions; TypeScript completed successfully with no emitted files.
- Loaded `/projects/cinerific` through the local Next.js server and confirmed HTTP 200 after clean-cache restarts. The landing and Cinerific routes remained locally available throughout the final checks.
- Used Playwright with the installed Chrome binary to verify five destinations in each bottom bar, eight genre buttons, three view-mode buttons, independent selected-state changes, HOME-active rail state, semantic aria attributes, and the correct UI Foundations category placement.
- Measured the Manrope/Broadway visual pair and the navigation/control groups at 1440px, 390px, and 340px viewports. Confirmed the intended 318px, 304px, and approximately 297.6px responsive widths where applicable.
- Verified genre and view-mode parents remained square, measured source-scaled nested glyphs, checked the phone SpaceEvenly item centers and shared label baseline, and confirmed both vertical rails resolve to the final equal 600px displayed height.
- Captured committed and local validation images for bottom, phone, genre, view-mode, full-foundation, responsive-width, and vertical-rail states. Visual review was paired with computed dimensions so stale CSS or misleading screenshot scaling could not pass unnoticed.
- Rechecked `/Users/prahlin/gh/cinerific` status after source inspection. The repository was not modified by this work; its existing `app/src/main/java/com/prahlin/cinerific/ui/CinerificIntroView.kt` change remained the only reported local delta.

Files Touched and Artifacts

- `app/layout.tsx` - registered italic EB Garamond through `next/font/google` and exposed the font variable on the root body.
- `app/page.tsx` - updated the landing quote copy and split the opening and closing quotation marks into independent spans.
- `app/globals.css` - added quote typography and responsive hero positioning, portrait device offsets, bottom-navigation variants, exact phone icon alignment, genre and view-mode geometry, expanded vertical rails, equal-height comparison transforms, and responsive foundation widths.

- app/projects/cinerific/ProductFlowSwitcher.tsx - added navigation/control datasets, interactive foundation components, corrected Navigations versus Controls & Inputs grouping, and the paired tablet/phone vertical-rail presentation.
- public/images/cinerific/ui-foundations/navigation - added bottom-nav-chrome.png plus the Home, Movies, Shows, Favorites, and Settings icon assets copied from the read-only Cinerific source tree.
- .codex/mockups/quote-fonts and .codex/validation - retained the committed font-comparison mockups and the browser-validation captures used to review the accepted quote, controls, bottom bars, and vertical rails.
- portfolio_PROJECT_SNAPSHOT.txt - regenerated the customary current project snapshot for this documentation pass.
- portfolio_worklog_october1.pdf - created this first October Portfolio worklog at the repository root using the established no-Part filename because no earlier October 1 PDF existed.

Follow-Up Context

- The landing hero now carries the accepted EB Garamond quote, punctuation, white color, three-line wrapping, enlarged marks, curve-aware row offsets, and protected portrait composition. Future changes should preserve the headline-linked sizing variables and avoid reintroducing scaleX-based row fitting.
- Cinerific Navigations now contains tablet and phone bottom bars plus the expanded paired vertical rails. Controls & Inputs contains Genre Navigation and View Mode. Future foundation additions should keep this semantic split.
- The browser implementations intentionally derive geometry from the current Compose constants. If the Android source changes, update the copied assets and source ratios together rather than retuning from screenshots alone.
- The local Cinerific repository remains outside the Portfolio write scope. Preserve the unrelated CinerificIntroView.kt modification during any future read-only asset or measurement pass.
- The local server remains the working preview. No public deployment was requested or performed in this record; any later publish should be treated as a separate authorized operation and documented independently.

Output Artifact

- Created portfolio_worklog_october1.pdf at the Portfolio repository root as the latest daily worklog for Thursday, October 1, 2026, following the established month-name, non-zero-padded day, and no-Part first-record naming convention.
- The PDF uses the established US Letter page size, Helvetica/Helvetica-Bold typography, compact technical prose, repeated dated footer, Codex metadata, and PDF 1.4 output profile.
- This record closes the October 1 landing-hero and Cinerific UI Foundations session at committed source state ab25f85, with main aligned to origin/main before the snapshot and worklog documentation artifacts were generated.
