

Prahl Portfolio Work Log - August 6, 2026

Compiled summary for Thursday, August 6, 2026 - focus: continuing the Prahl.dev Portfolio Alla Vostra case-study page after the August 5 hero proof-card and platform-badge pass, refining the UI Foundations / UX Product Flow navigation, universalizing hover/tap screenshot magnification, replacing opaque preview and crop backgrounds with true transparency, grouping Original Hero assets, importing Play Store media, rebuilding Controls & Inputs into product and cart state stacks, validating TypeScript and static export, refreshing the Portfolio project snapshot, reviewing all prior Portfolio PDF worklogs, and generating the August 6 Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after portfolio_worklog_august5.pdf and after the August 5 documentation state. The committed source state reviewed for this record is d3bda6a6a7293e34d3ead8df83875f192f3001c0 on main, matching origin/main before this PDF was generated. The August 5 PDF already covered f4ef9d4, 8caad05, and 8e21e8d even though the last two source commits were timestamped just after midnight on August 6 during the prior work cycle. No Hostinger production deployment was pushed during this record.

Source Materials Reviewed

- Ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed portfolio_PROJECT_SNAPSHOT.txt, including project notes, current source tree, line-numbered source dumps, public image and font inventories, PDF inventory, package and deployment configuration, git context, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF: portfolio_worklog_july11.pdf, portfolio_worklog_july14.pdf, portfolio_worklog_july15_part1.pdf, portfolio_worklog_july15_part2.pdf, portfolio_worklog_july16.pdf, portfolio_worklog_july19.pdf, portfolio_worklog_july20.pdf, portfolio_worklog_july21.pdf, portfolio_worklog_july22.pdf, portfolio_worklog_july23.pdf, portfolio_worklog_july24.pdf, portfolio_worklog_july25.pdf, portfolio_worklog_july29.pdf, portfolio_worklog_july30.pdf, portfolio_worklog_july31.pdf, portfolio_worklog_august1_part1.pdf, portfolio_worklog_august1_part2.pdf, portfolio_worklog_august1_part3.pdf, portfolio_worklog_august3.pdf, portfolio_worklog_august4.pdf, and portfolio_worklog_august5.pdf.
- Extracted text from all twenty-one existing Portfolio PDFs with pdftotext and checked metadata/page counts with pdinfo to preserve title cadence, opening-summary density, section order, compact bullet-heavy technical voice, validation language, files-touched lists, follow-up context, output-artifact close, root-level filename style, letter-size pages, PDF 1.4 output, Codex author/creator/producer metadata, and Helvetica-style base-font convention.
- Used portfolio_worklog_august5.pdf as the closest structural baseline because it documented the immediately preceding Alla Vostra hero proof-card polish, platform badge refinements, UX Product Flow diagram cleanup, repository hygiene, validation summary, and local-only output-artifact language.
- Reviewed git history and source state through git log, git show --stat, git show --name-status, git diff --stat, git diff --check, current branch state, and the committed

scope for d3bda6a. HEAD and origin/main both resolved to d3bda6a before this PDF was generated.

- Reviewed app/ScreenshotPreviewLayer.tsx, app/projects/alla-vostra/ProductFlowSwitcher.tsx, app/projects/alla-vostra/page.tsx, app/globals.css, .gitignore, read_project.sh, and the public/images/alla-vostra Play Store, hero-preview, ui-assets, and transparent-bgless asset inventories.

Baseline Status Before August 6 Work

- The August 5 Portfolio work had already polished the Alla Vostra hero proof cards, restored app-correct platform iconography, aligned the Full-Stack and Platforms card rows, tightened the UX Product Flow diagram, and hardened local cache and OS-metadata hygiene.
- The UI Foundations / UX Product Flow switcher still behaved like a normal in-page control instead of staying available during deeper downward scrolling, and it did not always return the user to the start of the selected view when the active option was clicked again.
- The active and inactive switcher button styling still needed final user-directed tuning around fill opacity, text color, and text-stroke behavior so the selected state felt decisive without breaking the Alla Vostra green visual language.
- Screenshot magnification existed only for some image classes and did not yet behave as a universal rule for all visible UI Foundations and UX Product Flow assets, including CSS-rendered swatches, typography samples, button frames, and labels.
- Magnification could still surface hidden or collapsed assets after Show Less, and some transparent-looking crops exposed black or dark backing rectangles that did not match the project page background.
- Original Hero background and cheeseboard imagery still magnified as separate pieces instead of as the single composed hero asset the user expected under Iconography & Imagery.
- The real Navigations and Controls & Inputs PNG crops were available, but several carried unwanted cream or white outer backing around controls while still requiring intentional internal fills, such as the counter box and inactive product navigation tab, to remain intact.
- The Controls & Inputs section still used earlier general-purpose labels and did not yet communicate the before/after product, quantity, cart-add, checkout-allowed, and checkout-disabled states with the final user-approved language.
- The Overview section explained the full-stack mobile ordering project in text, but did not yet show the imported Google Play listing and screenshot materials that make the Android release-preparation work visually concrete.

Goals for August 6

- Make the UI Foundations / UX Product Flow two-button navigation sticky during continued downward scrolling, then release that stickiness naturally when scrolling back above the original control position.
- Make either switcher button autoscroll to the start of its own screen every time it is tapped or clicked, including when the user clicks the already-active option.
- Finalize active and inactive switcher button visuals with the requested green fill, opacity, text, and stroke relationship while preserving the two-button bar layout.
- Apply hover/tap magnification universally inside the scoped UI Foundations and UX Product Flow sections, including normal screenshots, frame elements, swatches, typography samples, labels, and grouped composite assets.
- Prevent magnification for assets that are not currently visible because a section has been collapsed behind Show Less.
- Remove unwanted black, cream, or white preview backgrounds while preserving intentional

internal control fills and making transparent areas sit on the same background as the project page.

- Add Play Store screenshots under the Overview header, keep the overview divider and paragraph on the right side, preserve image aspect ratios, and settle the approved feature-plus-supporting-image layout.
- Rebuild the control and navigation stacks around product states, cart states, and final user-approved caption language, including low-visibility and high-visibility versions of Add, quantity, cart-add, and checkout controls.
- Keep all work local unless the user explicitly asks for commit, push, deploy, or public website updates.

Work Completed - Product Flow Navigation

- Reworked the UI Foundations / UX Product Flow navigation into a scroll-aware tab bar that becomes sticky during continued downward scrolling and releases when the user scrolls upward past its original anchor.
- Updated the tab-button click path so selecting UI Foundations or UX Product Flow always autoscrolls to the beginning of that selected screen, even if the selected button was already active.
- Iterated the active and inactive button styling through user-directed opacity and fill passes, then settled the active state on green filling with white text and heavier black text stroke while keeping the inactive state at matching opacity without text stroke.
- Preserved the tab bar as a two-button navigation row so the user can move between foundations and flow content without losing the current case-study context.

Work Completed - Magnification and Preview Behavior

- Expanded app/ScreenshotPreviewLayer.tsx from image-only behavior into a scoped preview system that can magnify both real img elements and visible element frames under data-screenshot-preview-scope.
- Added visible-rectangle checks so hover/tap previews only trigger for assets that are actually visible on screen, preventing collapsed Show Less content from appearing unexpectedly.
- Grouped green eyebrow titles and captions with the asset being magnified, so the preview carries the section label context along with the image, square frame, swatch, or control sample.
- Added element-clone preview handling for color squares, font samples, CSS-rendered UI samples, and other non-img foundations content that still belongs to the UI Foundations / UX Product Flow visual system.
- Removed black preview backfills and changed preview popovers to preserve true transparency so transparent pixels sit over the same dark gridded project background as the source page.
- Created and wired public/images/alla-vostra/header-hero-composition-preview.png so Original Hero magnifies as the accepted background-plus-cheeseboard composition instead of treating those source layers separately.
- Updated CSS for screenshot preview layers, image frames, labels, and element clones so preview geometry, border radii, object fit, and background behavior match the underlying asset rather than introducing a separate framed box.

Work Completed - Overview Play Store Media

- Located and imported the Alla Vostra Play Store image set into public/images/alla-vostra/play-store/playstore1.png through playstore5.png.
- Placed the Play Store feature graphic beneath the Overview header on the left side of the Overview section while keeping the vertical divider, paragraph copy, and supporting image

stack on the right side.

- Iterated Play Store image scale from very small thumbnails through larger two-row and grouped layouts, then settled on the approved feature image plus three-image supporting row under the paragraph copy.
- Removed the no-text image and the rightmost image from the rendered Overview media layout, while leaving the imported source files available in the public image inventory.
- Scaled the supporting three-image row to match the paragraph width and aligned the Overview copy/divider area with the approved top-edge relationship to the feature image row.

Work Completed - Navigation and Control Asset Stacks

- Grouped SHOP app header and Shop preview action buttons under Header CTA, with the final captions Navigate to Shop Preview Screen and Begin the Shopping Process.
- Rebuilt Controls & Inputs around final product/cart state stacks: Add (This) Item, Edit Quantity, Remove Item, Add (Any) Item, and Proceed To Checkout.
- Inserted high-visibility and low-visibility product Add states with the approved labels Before Added and After Added, then updated the descriptive copy to High Visibility = Item Not Yet Added and Low Visibility = Item Successfully Added.
- Moved the quantity controls into an Edit Quantity stack, swapped Before Set and After Set placement per the final instruction, and described those states as High Visibility = No Quantity Set and Low Visibility = Quantity Set.
- Moved Remove Item into its own stack and updated the remove product button language to Remove Item From Cart.
- Added low-visibility cart Add Items and Checkout assets, then labeled cart-add states as Before Added and After Added and checkout states as Checkout Allowed and Checkout Disallowed.
- Matched the high-visibility product counter shape, size, and proportions to the low-visibility zero-counter version so the before/after quantity states no longer looked mismatched or misleading.
- Removed unwanted cream/white outer backing around navigation and control crops while preserving intentional internal fills such as the quantity counter box and inactive product tab color.
- Increased Show More / Show Less button width so those controls match the combined width of a two-square device-frame stack across the Alla Vostra flow sections.

Work Completed - Assets, Styling, and Snapshot Hygiene

- Added transparent-bgless variants for the real app control crops so magnified controls and in-page square samples can use honest transparent backgrounds instead of captured outer panels.
- Added product-add-tapped.png, product-counter-high-vis.png, product-counter-low-vis.png, cart-add-items-low-vis.png, cart-checkout-low-vis.png, and related transparent-bgless copies for the final low/high visibility control states.
- Updated app/globals.css for sticky switcher positioning, final button visual states, universal preview cursor affordances, transparent preview layers, flow asset layout, Overview media sizing, control-stack grid behavior, and Show More / Show Less width.
- Added .next.stale-* to .gitignore for dev cache directories produced by the local cache-clearing pass.
- Regenerated portfolio_PROJECT_SNAPSHOT.txt for the current project state and normalized trailing whitespace after the snapshot script surfaced generated-cache inventory lines.

Validation Summary

- npm run check passed with tsc --noEmit after the committed August 6 source state and again

during this worklog-generation pass.

- npm run build:static passed with Next.js 16.2.10 and generated static routes for /, /_not-found, /articles, /projects/alla-vostra, and /projects/cinerific.
- The static-export validation flipped next-env.d.ts from the dev route-types reference to the production route-types reference as a generated side effect; that line was restored to the preexisting source state after validation.
- git diff --check initially caught trailing whitespace inside the regenerated snapshot; portfolio_PROJECT_SNAPSHOT.txt was normalized, and git diff --check then passed.
- pdftinfo and pdftotext were available locally and were used to inspect all prior worklog PDFs and to verify the generated August 6 PDF artifact.
- git status before PDF generation showed only the refreshed portfolio_PROJECT_SNAPSHOT.txt modified. After PDF generation, the expected additional local artifact is portfolio_worklog_august6.pdf.
- No Hostinger deploy branch update, GitHub Actions deployment dispatch, production publish, or live-site verification was performed during this documentation record.

Files Touched During August 6 Portfolio Work

- app/ScreenshotPreviewLayer.tsx - expanded screenshot preview behavior into scoped image and element magnification, added visible-element guards, grouped labels with assets, and preserved transparent preview backgrounds.
- app/projects/alla-vostra/ProductFlowSwitcher.tsx - refined UI Foundations / UX Product Flow navigation, grouped hero preview composition, reorganized navigation and control stacks, updated labels/captions, and wired new transparent/high-low visibility assets.
- app/projects/alla-vostra/page.tsx - added the Overview Play Store media layout, feature graphic, supporting screenshot row, and selected approved image ordering under the Overview section.
- app/globals.css - tuned sticky tab behavior, active/inactive switcher states, preview layer transparency, asset-frame sizing, Overview media placement, control-stack layout, and Show More / Show Less width.
- .gitignore - added .next.stale-* so stale development cache folders created during local cache-clearing passes stay out of source control.
- public/images/alla-vostra/header-hero-composition-preview.png - added the grouped Original Hero preview composition for magnification.
- public/images/alla-vostra/play-store/*.png - imported the Play Store image set used and inventoried by the Overview presentation.
- public/images/alla-vostra/ui-assets/*.png and public/images/alla-vostra/ui-assets/transparent-bgless/*.png - added low-visibility product/cart controls, high/low counter states, and transparent control variants.
- portfolio_PROJECT_SNAPSHOT.txt - regenerated with ./read_project.sh for current project context and normalized after generation so diff whitespace checks pass.
- portfolio_worklog_august6.pdf - generated as this August 6 Portfolio worklog artifact in the root-level Portfolio worklog convention.

Follow-Up Context

- The Product Flow switcher now carries scroll behavior as well as view switching. Future edits should keep the anchor/release behavior and active-button autoscroll rule intact unless the user asks for a navigation behavior change.
- The magnification system is now intentionally scoped by data-screenshot-preview-scope. New UI Foundations or UX Product Flow assets inside that scope should magnify automatically only when visible; hidden collapsed assets should remain inert.
- Transparent-bgless UI asset variants are the preferred control crops for preview and square-frame display where an outer captured panel would create black, cream, or

mismatched backing. Intentional internal fills, including counter boxes and inactive tabs, should remain visible.

- The Overview Play Store directory contains all five imported files, while the rendered page uses the final approved subset and layout. Future swaps can reuse the unused file without another import pass.
- The refreshed snapshot currently inventories timestamped `.next.cleared-*` cache directories produced by prior local cache-clearing work. That is snapshot context, not a new source feature; changing the snapshot ignore policy should be a separate explicit maintenance task.
- No public deployment was performed during this record. The current source state is committed and aligned with origin/main, while the refreshed snapshot and this August 6 PDF are local documentation artifacts until the user requests or approves a documentation commit.

Output Artifact

- Generated file: `portfolio_worklog_august6.pdf`.
- Location: `/Users/prahlin/gh/portfolio/portfolio_worklog_august6.pdf`.
- Naming follows the existing root-level Portfolio convention for a single daily PDF: `portfolio_worklog_august6.pdf`.
- Uses the same daily worklog structure and compact technical voice established by `portfolio_worklog_july11.pdf` through `portfolio_worklog_august5.pdf`.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this artifact.
- The local project date used for this filename and title is Thursday, August 6, 2026, matching the user-requested latest August 6 worklog.
