

Prahlín Portfolio Work Log - October 2, 2026

Compiled summary for Friday, October 2, 2026 - focus: continuing the Prahlin Portfolio after the October 1 landing-hero and Cinerific UI Foundations record, independently verifying the United States Eastern date, extracting and studying all forty-six pre-existing Portfolio PDF worklogs, refining landing hero scaling and narrow portrait composition, rebuilding Work Space and Work Tools into coordinated responsive panels, extending the workstation, peripheral, QA-device, and software inventories, reusing established Android and Apple marks, standardizing icon and eyebrow alignment, tightening landing navigation language and order, adding direct FLOW and VALUES section anchors plus the UI/UX route, preserving a persistent local Next.js preview, validating TypeScript and live routes, documenting committed source state 92b8ef3, refreshing the Portfolio project snapshot, and generating the October 2 Portfolio PDF worklog.

Generated in continuity with the established Prahlin Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, committed-source sequence, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahlin/portfolio work performed after portfolio_worklog_october1.pdf and its documentation commit 359d4ec. The source work is represented by commits 8db62e8, e219363, and 92b8ef3 on main, matching origin/main before this PDF was generated. Together they changed the landing hero, the Work Space and Work Tools presentation, global responsive styling, shared navigation data, and landing-section anchors. No Hostinger deploy-branch work, GitHub Actions dispatch, static production publish, or public deployment was performed during this record. The documentation deltas created by this generation pass are the refreshed portfolio_PROJECT_SNAPSHOT.txt file and this root-level October 2 PDF worklog.

Source Materials Reviewed

- Verified the United States Eastern date with an explicit America/New_York timezone query, which reported Friday, October 2, 2026 at 9:38 PM EDT with a UTC-04:00 offset. October 2 remains within Eastern Daylight Time, so the filename and title use October 2 rather than relying on the host or UTC calendar date.
- Ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt before composing this record, preserving the established source, asset, configuration, Git, PDF-inventory, and workflow-context capture practice.
- Extracted and studied all forty-six pre-existing root-level Portfolio PDF worklogs with pdftotext: fifteen July records, fifteen August records, fifteen September records, and portfolio_worklog_october1.pdf. Before this artifact, the series contained 267 PDF pages and approximately 128,147 extracted words.
- Compared the complete record set for filename cadence, same-day Part suffix behavior, title construction, opening-summary density, source and baseline framing, technical bullet voice, validation language, files-touched treatment, follow-up continuity, dated page footers, and output-artifact closure.
- Used October 1 as the direct chronological baseline, September 29 and September 29 Part 2 for the earlier workspace, workflow, proof, and hero composition decisions, and the mature July-through-September records for typography, metadata, page geometry, and narrative conventions.
- Checked pdfinfo, pdffonts, and extracted page geometry across early, middle, recent, and latest records. The mature artifact convention remains US Letter at 612 x 792 points, PDF 1.4, Helvetica and Helvetica-Bold, no encryption, Codex metadata, dense black-on-white technical copy, and a repeated dated page footer.
- Reviewed commits 8db62e8, e219363, and 92b8ef3 through git log, git show, commit bodies, file statistics, branch tracking, and the refreshed project snapshot. Confirmed main and origin/main both resolve to 92b8ef336b6ef2c712d42242205a30bf88329185, titled Refined Landing Navigation and Section Anchors.
- Reviewed app/page.tsx, app/globals.css, app/PortfolioSections.tsx, public/images/carousel-arrow.svg, public/images/android-robot-head.svg, and public/images/apple-logo-official.svg as the current implementation and reused-asset surface for the October 2 work.

Baseline Status Before October 2 Work

- The October 1 landing hero had the accepted EB Garamond quote, three natural-width rows, white quotation marks, headline-linked scaling variables, and lowered narrow portrait devices. The type still began shrinking too early while moving from the widest aspect-ratio treatment into the next-wide layout.
- The quote retained a three-row structure throughout the compact portrait ranges. At the two narrowest layouts it needed the same quote-to-profile scale relationship as the wide hero, a controlled four-row break, horizontal centering between the left page margin and profile photo, and device placement based on the photo bubble rather than its name tag.
- The landing Work Space and Work Tools content was visually related but structurally uneven across aspect ratios. Wide layouts used a presentation that diverged from the clearer narrow hierarchy, while dividers, eyebrow orientation, text indentation, and row spacing varied between groups.

- The workstation inventory did not yet represent dual CMV monitors, external storage, a powered USB hub, or the additional large iPad testing target. The tools inventory grouped multiple disciplines under broad stacks instead of giving development environments, AI agents, design apps, coding software, and workflow platforms their own labeled rows.
- The top navigation still used mixed-case labels and older names such as Case Studies and Worklog. It lacked direct FLOW and VALUES anchors, had no UI/UX route label, and retained an About Dev entry even though that section does not exist on the landing page.

Goals for October 2

- Delay responsive resizing of the Full-Stack React Native / Kotlin Developer hero headline until after the first wide-layout breakpoint and keep quote scaling visually tied to the headline.
- Give the two narrowest portrait layouts a four-row quote at the wide-layout quote-to-profile proportion, center it in its available horizontal corridor, and vertically balance the device composition between the photo bubble and proof strip without using the nametag as a boundary.
- Make Work Space and Work Tools follow one responsive system: stacked and readable on narrow layouts, parallel on desktop, with consistent dividers, arrows, eyebrow/icon alignment, text indentation, and evenly distributed vertical spacing.
- Expand the displayed workstation, peripherals, QA devices, and work-tool taxonomy while preserving the established landing visual language and reusing available branded platform marks where suitable.
- Convert non-brand navigation labels to uppercase, shorten and reorder the labels to match the landing page's section sequence, remove the invalid landing About Dev link, and provide working destinations for UI/UX, FLOW, and VALUES.

Work Completed - Landing Hero Scaling and Quote Wrapping

- Replaced the original broad viewport-based headline clamp with a calculated progression that holds the accepted maximum longer and begins resizing only after the first wide-layout breakpoint. The quote variable received a corresponding calculated range so the two elements continue to resize as one visual system.
- Increased the quote scale by five percent throughout the relevant wide and compact rules, including the dedicated 721px-to-980px portrait value and the narrower mobile clamp, without changing the approved EB Garamond weight, color, punctuation, or quotation-mark treatment.
- Added explicit standard and narrow quote rows in HeroBridgeQuote. Wide layouts retain Everyone's got a brilliant / idea; Few know how to funnel / it into a must-have product., while layouts at 720px and below switch to Everyone's got a / brilliant idea; Few know / how to funnel it into a / must-have product.
- Kept the four-row compact treatment out of flow until its media query applies, then centered the quote as a flex column and shifted its container into the horizontal corridor between the screen-left margin and profile-photo bubble.
- Preserved semantic continuity by keeping the same sentence, punctuation, and opening/closing quotation-mark spans across both rendered line systems rather than introducing alternate copy for narrow screens.

Work Completed - Narrow Hero Vertical Composition

- Increased the narrow portrait device-stage translation from the earlier 65px treatment to 116.58px after comparing the two compact aspect-ratio examples and the available corridor above the 3yrs proof-stat strip.
- Used the profile photo bubble itself as the upper reference ceiling. The Martin Prahli name tag was explicitly excluded from the vertical-center calculation, allowing its independent placement to remain visually attached to the portrait without compressing the device corridor.
- Centered the complete phone/tablet composition as one unit between the photo-bubble boundary and beginning of the proof metrics. The phone frames, screenshots, tablet frame, rotations, overlap order, and internal crop geometry remained unchanged.
- Kept the proof-service panel and four stat stacks in their existing positions. The correction is isolated to the compact hero presentation and does not move the Vercel/EAS/Stripe/Postmark/GGL Play/App Store panel or the 3yrs, 1.0k, 0.2k, and 8 metrics.

Work Completed - Responsive Work Space and Work Tools Panels

- Rebuilt the landing workspace area as two named workspace-panel containers. Work Space contains Work Station, Peripherals, and QA Devs; Work Tools contains Dev Env, AI Agents, Design Apps, Coding Software, and Version Control.
- Kept the panels in a single stacked column by default, then placed them immediately beside one another in two equal desktop columns at 981px and above. This conforms wider aspect ratios to the clearer narrow presentation while retaining a desktop comparison view.

- Shortened My Work Space and My Work Tools to Work Space and Work Tools. Added a three-arrow bridge centered in the live space between the two desktop headings by anchoring to the right edge of Work Space and left edge of Work Tools.
- Reused carousel-arrow.svg for three right-facing white arrows with black outlines. The final arrow group halves the initially generous internal spacing while remaining horizontally centered between the heading bounds rather than attached to either heading.
- Removed the left-most divider from both sections and generated one divider to the right of each icon/green-eyebrow column. Matched both divider lengths, extended the working height by fifty percent, and used full-height flex timelines so complete row groups distribute evenly from top to bottom.
- Removed gray-detail indentation relative to each small white header and removed the indentation between small white headers and their larger parent headers. The text hierarchy now depends on weight, size, and spacing rather than inconsistent horizontal offsets.
- Horizontally centered the top word of every two-line green eyebrow beneath its icon, then aligned the second word's right edge to the first word's right edge. Applied the same icon-centering behavior to all workspace rows and preserved accessible full labels with screen-reader-only text.
- Vertically matched the right-side header and word stacks to their left-side counterparts, moved QA DEVS as low as the divider permits without entering bottom padding, and distributed every icon, eyebrow, header, and detail group as a complete row rather than spacing only labels.

Work Completed - Workspace Inventory and Platform Marks

- Added a second CMV 14-inch monitor entry beneath External Monitor to represent the dual-monitor setup displayed by the current workstation list.
- Added a dedicated PERI-/PHERALS row with a hard-drive icon. Its content identifies External Hard Drive / 3TB WD My Book and USB Hub / Atolla 240W 8-Port as one vertically centered peripheral stack.
- Renamed QA DEVICES to QA DEVS and preserved the Android and iOS device groupings. Added iPad Air 12 (Large) beneath iPad Air 14 (Standard) without removing the existing Samsung, iPhone, Galaxy Tab, or iPad entries.
- Reused the self-made Android robot mark and Apple logo treatment already available from the Alla Vostra project assets. The Android mark appears to the left of Android, while the Apple SVG is applied as a light mask to the left of iOS.
- Kept both platform marks decorative with empty or hidden accessible treatment so the adjacent Android and iOS headings remain the announced content.

Work Completed - Work Tools Taxonomy and Icons

- Separated Development Environments into its own DEV ENV eyebrow with the CodeXml icon and retained VS Code, Android Studio, Xcode, and PyCharm beneath the full white header.
- Separated AI-Assisted Development into its own AI AGENTS eyebrow with the BrainCircuit icon and retained Codex, Claude, ChatGPT, and GitHub Copilot as the associated tool list.
- Renamed DESIGN SOFTWARE to DESIGN APPS, moved both the palette icon and green eyebrow beside Design & Motion, and retained Figma, Photoshop, Illustrator, After Effects, and Media Encoder.
- Kept CODING SOFTWARE as the eyebrow for Testing & Debugging, using the braces icon and the Expo Go, Android Emulator / AVD, iOS Simulator, ADB, and Postman list.
- Gave Workflow Platforms its own VERSION CONTROL eyebrow with the Workflow icon and retained GitHub, Jira, and ServiceNow beneath the white parent header.
- Chose the three requested best-fit Lucide candidates for the new stacks: CodeXml for development environments, BrainCircuit for AI-assisted development, and Workflow for workflow platforms. HardDrive and Palette complete the same line-icon vocabulary for peripherals and design.

Work Completed - Landing Navigation and Anchors

- Added a CSS rule that renders every non-brand navigation link in uppercase while exempting the Prahlin.dev brand through nav-brand-link. Label data remains readable title case in the component while presentation is consistently uppercase.
- Renamed Case Studies to CASES and Worklog to SPACE, then added UI/UX, FLOW, and VALUES. Removed About Dev because its destination is not represented as a landing-page section.
- Reordered the non-brand links to match the landing page's top-to-bottom structure: CASES, UI/UX, STACK, SPACE, FLOW, VALUES, and CONTACT. UI/UX remains immediately after CASES because its current destination is the articles route rather than a new landing section.
- Connected UI/UX to /articles from the landing page and retained active article-page behavior. Added id="workflow" to My Workflow and id="values" to My Core Beliefs so FLOW and VALUES navigate to real landing targets in both home and cross-route contexts.

- Preserved the existing context-aware homeHash behavior, brand destination, spacer, and contact anchor. The navigation refinement changed labels, ordering, and destinations without replacing the shared navigation component.

Work Completed - Local Preview and Documentation Continuity

- Kept the Next.js development preview in a detached screen session named portfolio-dev so it remains available across short interaction turns instead of being tied to a managed command session.
- Confirmed the preview listens on 127.0.0.1:3000 and returned HTTP 200 for both the landing route and /articles during the documentation pass.
- Used targeted source and route validation for the small navigation changes rather than repeating cache clears, full viewport capture suites, or unrelated visual checks after every request.
- Ran the customary project reader during worklog generation. The resulting snapshot records source state 92b8ef3, the current asset and PDF inventories, repository context, and the session's established commit-before-push instruction.

Committed Source Sequence

- 8db62e8 - Refined Landing Hero Scaling and Narrow-Layout Composition. Delayed headline resizing, enlarged the quote by five percent, added the four-row narrow treatment, matched compact quote/profile scale, centered the quote horizontally, and centered the device stack vertically using the photo bubble rather than the name tag.
- e219363 - Reworked Work Space and Work Tools Layouts. Split the content into responsive panels, introduced matched extended dividers and the centered three-arrow bridge, expanded workstation/peripheral/QA inventories, separated five work-tool categories, aligned icons and eyebrow labels, and reused Android and Apple project marks.
- 92b8ef3 - Refined Landing Navigation and Section Anchors. Enforced uppercase non-brand navigation, shortened CASES and SPACE, added UI/UX, FLOW, and VALUES, reordered links to page sequence, removed ABOUT DEV, and added workflow and values landing anchors.
- The three commits form one coherent landing-page responsive and information-architecture pass: hero behavior was corrected first, the workspace/tools composition was normalized and expanded second, and navigation language plus section access was finalized third.

Validation Summary

- Ran npm run check after the October 2 source work and again during this documentation pass; TypeScript completed successfully with no emitted files.
- Confirmed main and origin/main both resolve to 92b8ef336b6ef2c712d42242205a30bf88329185 before generating the documentation artifacts.
- Loaded / and /articles through the persistent local Next.js server and confirmed HTTP 200 responses. The preview remained available at <http://127.0.0.1:3000>.
- Reviewed the three committed diffs and verified their file boundaries: 54 insertions and 14 deletions across the hero/snapshot pass, 385 insertions and 116 deletions across the workspace/tools pass, and 22 insertions and 8 deletions across the navigation/anchor pass.
- Confirmed carousel-arrow.svg, android-robot-head.svg, and apple-logo-official.svg remain present under public/images and are referenced rather than duplicated as new raster assets.
- Verified the generated snapshot and source tree without modifying application code during this worklog pass. The snapshot generator reproduces whitespace from included source excerpts, so snapshot-only trailing-whitespace reports were not treated as application-source failures.
- Validated this PDF after generation with pdftinfo, pdffonts, pdftotext, and rasterized page review to confirm Letter geometry, PDF 1.4, Helvetica fonts, complete extraction, repeated footers, expected section order, and no clipped final-page content.

Files Touched and Artifacts

- app/page.tsx - added alternate narrow quote rows, reorganized Work Space and Work Tools into responsive panels, expanded the device and peripheral inventories, separated tool categories, added icon/eyebrow rendering helpers, reused platform marks, inserted the three-arrow heading bridge, and added workflow and values section IDs.
- app/globals.css - revised hero headline/quote calculations, four-row narrow quote visibility and positioning, compact device offset, two-panel workspace layout, divider geometry, row spacing, eyebrow alignment, text indentation, platform marks, arrow anchoring, and uppercase navigation presentation.
- app/PortfolioSections.tsx - renamed, added, removed, and reordered shared navigation items; connected UI/UX to articles; and added FLOW and VALUES hash targets while preserving context-aware routing.

- public/images/carousel-arrow.svg - reused as the three centered right-facing heading arrows; no source modification was required.
- public/images/android-robot-head.svg and public/images/apple-logo-official.svg - reused for the Android and iOS QA-device labels; no source modification was required.
- portfolio_PROJECT_SNAPSHOT.txt - regenerated through ./read_project.sh so the documentation companion records final committed source state 92b8ef3 and all forty-six prior worklogs.
- portfolio_worklog_october2.pdf - created as this first October 2 Portfolio worklog at the repository root using the established no-Part filename.

Follow-Up Context

- The narrow quote intentionally uses separate four-row markup at 720px and below while wider modes retain three rows. Copy changes should update both line systems together and preserve identical punctuation and semantics.
- Compact hero centering depends on the profile photo bubble as the upper boundary and the proof-stat strip as the lower boundary. Do not include the Martin Prahlin name tag in future vertical-center calculations unless the visual requirement explicitly changes.
- Work Space and Work Tools share desktop panel height, matched right-side dividers, flex-distributed complete rows, and a heading bridge positioned through CSS anchors. Future additions should preserve equivalent panel rhythm and remeasure row density before increasing fixed minimum heights.
- PERI-/PHERALS, DEV ENV, AI AGENTS, DESIGN APPS, CODING SOFTWARE, VERSION CONTROL, and QA DEVS are intentional display labels. Their accessible labels remain complete even where the visual eyebrow wraps or abbreviates.
- UI/UX currently routes to /articles because a dedicated landing section does not yet exist. If one is added later, update its destination and place it according to the new section's actual top-to-bottom position.
- The detached portfolio-dev screen session is the preferred local-preview mechanism for this repository. Future routine edits should use lightweight validation and avoid unnecessary cache resets or broad screenshot passes unless stale output or layout risk warrants them.
- As with prior Portfolio work, ask for the commit message before committing or pushing the refreshed snapshot or this PDF unless the user explicitly supplies the message and requests the operation.

Output Artifact

- Created /Users/prahlin/gh/portfolio/portfolio_worklog_october2.pdf as the latest daily worklog for Friday, October 2, 2026, following the established month-name, non-zero-padded day, and no-Part first-record naming convention.
- Produced a US Letter, PDF 1.4, unencrypted document using Helvetica and Helvetica-Bold with Codex title, subject, author, creator, and producer metadata.
- Preserved the established dense technical narrative, section ordering, repeated dated page footer, and end-of-document continuity notes used by the mature Portfolio worklog series.
- Source state reviewed: 92b8ef336b6ef2c712d42242205a30bf88329185 on main and origin/main before snapshot and PDF generation.
- No application-source change, source commit, push, deployment, Hostinger synchronization, GitHub Actions dispatch, or production publish was performed as part of generating this PDF artifact.
