

Prahl Portfolio Work Log - September 8, 2026 (Part 2)

Compiled summary for Tuesday, September 8, 2026 - Part 2 - focus: continuing the Prahl.dev Portfolio Alla Vostra UI Foundations Visual Hierarchy work after the earlier September 8 On-Scrolling fade and brace record, re-verifying the United States Eastern date, re-running the project reader, studying the refreshed snapshot and every pre-existing Portfolio PDF worklog, refining the During Shopping Secondary and Tertiary stacks, adding and renaming product-overlay callout pins, matching pin line weight and green rotated headers across Primary, Secondary, and Tertiary, aligning Pre-Scrolling, On-Scrolling, and During Shopping row geometry against primary device-frame edges, adding grouped Visual Hierarchy Show More / Show Less behavior for wide and portrait layouts, validating TypeScript and browser-rendered behavior, recommending the commit message, documenting the committed source state at 61a318a, pushing the official Hostinger static export fallback to prahl.dev through hostinger-deploy commit 0bf918d, refreshing the Portfolio project snapshot, and generating the September 8 Part 2 Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after portfolio_worklog_september8.pdf and after the September 8 Part 1 documentation state. The source state reviewed for this record is 61a318ae14aca5d438a838188660a35004690eae on main, matching origin/main after the Visual Hierarchy source commit titled Refined Alla Vostra visual hierarchy expansion and callouts. The official public deployment path was attempted through the existing GitHub Actions Hostinger workflow, which failed quickly as in prior records, so the current static export was built locally and force-pushed to origin/hostinger-deploy as 0bf918d79c1775ef950948b72e0370a509bea980. Live prahl.dev verification returned HTTP 200 and the deployed Alla Vostra page referenced the new build ID 4mEv3JXgzQ5LdSDwpuzsP. The local documentation deltas created by this pass are the refreshed portfolio_PROJECT_SNAPSHOT.txt file and this Part 2 PDF worklog.

Source Materials Reviewed

- Verified the United States Eastern date with TZ=America/New_York date, which reported Tuesday, September 8, 2026 at about 10:44 PM EDT during this worklog pass. A UTC-04:00 time check confirmed the same Eastern calendar date. The session therefore uses September 8, 2026, even though UTC had already crossed into September 9.
- Applied the user clarification that an additional worklog on the same Eastern date should be called Part 2, producing portfolio_worklog_september8_part2.pdf while leaving the existing un-suffixed September 8 PDF in place.
- Ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed portfolio_PROJECT_SNAPSHOT.txt, including project notes, current source tree, line-numbered source dumps, public image inventory, PDF worklog inventory, deployment archive context, package and deployment configuration, git context, recent commits, generated/cache ignore policy, and the standing commit/push conventions.
- Reviewed every pre-existing Portfolio root-level worklog PDF: portfolio_worklog_july11.pdf, portfolio_worklog_july14.pdf, portfolio_worklog_july15_part1.pdf, portfolio_worklog_july15_part2.pdf, portfolio_worklog_july16.pdf, portfolio_worklog_july19.pdf, portfolio_worklog_july20.pdf, portfolio_worklog_july21.pdf,

- portfolio_worklog_july22.pdf, portfolio_worklog_july23.pdf, portfolio_worklog_july24.pdf, portfolio_worklog_july25.pdf, portfolio_worklog_july29.pdf, portfolio_worklog_july30.pdf, portfolio_worklog_july31.pdf, portfolio_worklog_august1_part1.pdf, portfolio_worklog_august1_part2.pdf, portfolio_worklog_august1_part3.pdf, portfolio_worklog_august3.pdf, portfolio_worklog_august4.pdf, portfolio_worklog_august5.pdf, portfolio_worklog_august6.pdf, portfolio_worklog_august10_part1.pdf, portfolio_worklog_august10_part2.pdf, portfolio_worklog_august11.pdf, portfolio_worklog_august12_part1.pdf, portfolio_worklog_august12_part2.pdf, portfolio_worklog_august14.pdf, portfolio_worklog_august16.pdf, portfolio_worklog_august24.pdf, portfolio_worklog_september7.pdf, and portfolio_worklog_september8.pdf.
- Extracted text from all thirty-two existing Portfolio PDFs with pdftotext and checked recent metadata with pdfinfo and pdffonts to preserve title cadence, daily and same-day part naming, opening-summary density, section order, compact bullet-heavy technical voice, validation language, files-touched lists, follow-up context, output-artifact close, root-level filename style, letter-size pages, PDF 1.4 output, Helvetica Type 1 text, and Codex author/creator/producer metadata.
 - Used portfolio_worklog_september8.pdf as the closest same-day baseline because it documented the immediately preceding Visual Hierarchy fade, brace, callout, responsive spacing, TypeScript, static-export, and Playwright measurement pass.
 - Reviewed git history and deployment state through git status, git log, git show --stat, git show --name-status, git ls-remote origin main hostinger-deploy, gh run list for the Hostinger static-export workflow, package scripts, local validation output, and live prahl.dev curl checks.
 - Reviewed app/projects/alla-vostra/ProductFlowSwitcher.tsx, app/globals.css, portfolio_PROJECT_SNAPSHOT.txt, the Alla Vostra Visual Hierarchy image assets, package.json scripts, .github/workflows/hostinger-static-export.yml, DEPLOYMENT.md, and the generated out/ static-export payload.

Baseline Status Before September 8 Part 2 Work

- The earlier September 8 PDF had already captured the On-Scrolling Secondary fade, Step 4 and Step 5 brace matching, unwanted callout pruning, Tertiary MAIN CONTENT centering, one-column side-lane protection, local cache clearing, and validation around commit 9162c6b.
- The During Shopping row still needed to inherit the same Visual Hierarchy annotation language as Pre-Scrolling and On-Scrolling: focal braces, Focal Point headers, white callout lines, and rotated green labels that read as one consistent system rather than a later add-on.
- The During Shopping Secondary and Tertiary stacks were visually too large and then too close together, so the row needed repeated scale and vertical-distribution passes against the Primary products-overlay device frame.
- Primary During Shopping had incomplete or imprecise callout labels around the hero/product imagery, product navigation, action controls, and screen navigation. The user wanted exact vertical pin placement and label wording that avoided awkward TOP/NAV and BOTTOM/NAV line breaks.
- The Secondary and Tertiary During Shopping stacks needed their own callout pin sets, but the smaller stack scale made it easy to accidentally shrink lines and green labels. The accepted direction was to keep primary-like line thickness and label sizing while abbreviating copy where necessary.
- The Pre-Scrolling, On-Scrolling, and During Shopping right-column stack positions needed a shared rule: Secondary top aligned with the Primary device-frame top, the lowest featured stack bottom aligned with the Primary device-frame bottom, and intermediate stacks held in the true vertical middle when present.
- The Visual Hierarchy section still displayed all ten stacks immediately. Unlike the

other UI Foundations sections, it had no initial collapsed state, so the page presented too much content before the user chose to expand it.

- The existing reusable PlaceholderStage Show More renderer was built around a simple sequence of screenshots, but Visual Hierarchy relies on row labels and step-specific CSS classes. A direct visibleStepLimit change would have hidden content while breaking custom grid placement and expanded-row labeling.
- The public deployment source remained GitHub main plus a Hostinger static-export branch. Prior worklogs documented that the GitHub Actions workflow could fail quickly even when local TypeScript and static export passed, so the manual out/ to hostinger-deploy fallback remained the known official escape hatch.

Goals for September 8 Part 2

- Verify the active United States Eastern date and produce the same-day Part 2 PDF using the established root-level naming convention.
- Study the existing snapshot and all prior PDF worklogs before writing the new documentation artifact.
- Scale the During Shopping Secondary and Tertiary stacks down in two five-percent passes while keeping the stacks separated and unclipped.
- Distribute During Shopping Secondary and Tertiary vertically against the Primary device frame, first with wider spacing and then with edge-aligned top and bottom logic.
- Copy the accepted Focal Point headers and braces from On-Scrolling onto During Shopping Secondary and Tertiary, then tune brace height and vertical placement without changing contour or stroke character.
- Add, rename, wrap, and vertically place the During Shopping callout pins for product image, product navigation, action controls, and screen navigation across Primary, Secondary, and Tertiary where those features are actually visible.
- Match Secondary pin line thickness, length, green-header scale, and 90-degree label rotation to the Primary pin system rather than shrinking the annotations to fit.
- Apply the same primary-frame edge-alignment logic to On-Scrolling and Pre-Scrolling right-column stacks, leaving the Pre-Scrolling Tertiary stack centered between Secondary and Quaternary.
- Make Visual Hierarchy initially show only PRE-SCROLLING in wide and portrait modes, with Show More revealing ON-SCROLLING and DURING SHOPPING and Show Less collapsing back to the first row.
- Validate the resulting local and deployed behavior through TypeScript, browser measurements, static export, remote branch checks, and prahl.dev live-response checks.

Work Completed - During Shopping Stack Scale, Braces, and Row Positioning

- Reduced the During Shopping Secondary and Tertiary image-frame widths twice by five percent, settling those stacks at a smaller 310.5px source image width while preserving their surrounding Visual Hierarchy frame-pair treatment.
- Kept the two small During Shopping stacks visually separated and unclipped after scale reduction by retuning their top offsets instead of allowing the right column to compress into a crowded cluster.
- Copied the On-Scrolling Secondary and Tertiary Focal Point brace/header model onto the During Shopping Secondary and Tertiary stacks so the right column reads with the same white brace and vertical Focal Point language.
- Nudged the During Shopping Secondary brace upward in several small increments while keeping its thickness, curvature, and shape consistent with the accepted Visual Hierarchy brace system.
- Increased the During Shopping Tertiary brace height in two passes, then nudged it upward so the taller brace still frames the relevant product-overlay content without

clipping at the image edge.

- Moved the corresponding Focal Point headers with the brace changes so brace and label placement stayed together instead of drifting independently.
- Centered the During Shopping Secondary and Tertiary stack headers horizontally over their respective images to match the accepted On-Scrolling and Pre-Scrolling header behavior.
- Aligned the During Shopping Secondary stack top edge with the Primary device-frame top and aligned the Tertiary image bottom with the Primary device-frame bottom, preserving the larger vertical breathing room requested by the user.

Work Completed - During Shopping Pins and Green Headers

- Added a Product Image pin on the During Shopping Primary stack and placed it at the vertical midpoint of the Piccola product image inside the screenshot.
- Moved the Primary product navigation pin to the exact vertical center of the Sei Perfetto / Piccola / Buon Natale nav bar and renamed the callout to PRODUCT NAV.
- Added a Primary screen navigation pin at the vertical center of the bottom cart/navigation region and renamed the callout to SCREEN NAV.
- Added an ACTION CONTROLS pin centered on the green ADD button, with the label wrapping after ACTION in the established green rotated header style.
- Adjusted earlier TOP NAV BAR and BOTTOM NAV BAR wording through the requested wrap and rename sequence, ending on PRODUCT NAV and SCREEN NAV for Primary.
- Copied the accepted Primary callout concept into the During Shopping Secondary stack with correct vertical placement for SHOP BTN, PROD NAV, PROD IMG, ACT CONT, and SCREEN NAV.
- Renamed the Secondary labels to short forms so they could keep the same visual scale: SHOP BTN, PROD NAV, PROD IMG, ACT CONT, and SCREEN NAV, each wrapped after the first word where applicable.
- Ensured the Secondary green headers rotated 90 degrees like the Primary labels and restored line thickness, line length, and header size so the annotation system did not become miniature.
- Nudged SHOP BTN higher and PROD NAV lower in the Secondary stack to avoid clipping while maintaining the accepted primary-like pin geometry.
- Copied the exact Secondary pin system onto Tertiary where applicable, omitting SHOP BTN and SCREEN NAV because those features are not present in the Tertiary image, then nudged PROD NAV down to the true product-nav vertical center.

Work Completed - Cross-Row Alignment and Visual Hierarchy Collapse

- Applied the primary-frame edge-alignment rule to the On-Scrolling row so Secondary aligned to the Primary frame top and Tertiary aligned to the Primary frame bottom after expansion into the new grouped layout.
- Applied the same logic to Pre-Scrolling Secondary and Quaternary while keeping the Pre-Scrolling Tertiary stack exactly centered between those two right-column stacks.
- Added Visual Hierarchy row-label data for PRE-SCROLLING, ON-SCROLLING, and DURING SHOPPING and grouped those labels with the corresponding step arrays in ProductFlowSwitcher.
- Extended PlaceholderStage with rowGroups and visibleRowLimit support so Visual Hierarchy can collapse by row rather than by a raw screenshot count.
- Extracted shared step-stack rendering inside PlaceholderStage so expanded extra rows retain their flow-screen-stack-step-* classes and continue receiving the Visual Hierarchy CSS rules they depend on.
- Rendered grouped Visual Hierarchy rows as separate flow-capture-grid-row-group containers, preserving row labels in the expanded area instead of leaving ON-SCROLLING and DURING SHOPPING as unlabeled hidden stacks.

- Set Visual Hierarchy to visibleRowLimit 1 so both landscape/wide and narrow/portrait modes initially show only the PRE-SCROLLING row followed by the existing Show More button.
- Added CSS row-group rebasing so ON-SCROLLING and DURING SHOPPING keep their custom desktop geometry when moved into the expandable area, including zoom-aware top offsets for secondary and tertiary stacks.
- Added late portrait overrides so each grouped row starts with its own label and the Primary, Secondary, and Tertiary/Quaternary stacks flow beneath it rather than inheriting the old all-rows-in-one-grid row numbers.
- Confirmed Show Less collapses the extra rows back to zero height while leaving PRE-SCROLLING visible as the initial Visual Hierarchy content.

Work Completed - Commit, Deployment, and Public Verification

- Provided the requested commit-message recommendation with one header and hyphen-led change points covering Visual Hierarchy row grouping, collapse behavior, During Shopping stack tuning, pins, alignment, validation, and snapshot refresh.
- Documented the committed source state at 61a318a, Refined Alla Vostra visual hierarchy expansion and callouts, with app/globals.css, app/projects/alla-vostra/ProductFlowSwitcher.tsx, and portfolio_PROJECT_SNAPSHOT.txt as the committed file set.
- Checked GitHub Actions and confirmed the latest Build static export for Hostinger run for 61a318a completed as a quick failure, matching the prior remote workflow blockage pattern rather than a local build failure.
- Ran npm run build:static locally with NEXT_OUTPUT=export next build and confirmed the static export completed successfully, generating the expected six static routes: /, /_not-found, /articles, /projects/alla-vostra, and /projects/cinerific.
- Restored next-env.d.ts after static export temporarily flipped the route-types import from the dev-server path to the build path, avoiding unrelated generated-file churn in the source worktree.
- Removed generated .DS_Store output from out/ before publishing the static payload to the deploy branch.
- Initialized a temporary git repository inside out/, committed the static export as 0bf918d with the message Deploy static export from 61a318ae14aca5d438a838188660a35004690eae, and force-pushed origin/hostinger-deploy from 6172ece to 0bf918d.
- Verified origin/main at 61a318a and origin/hostinger-deploy at 0bf918d after the manual deploy branch push completed.
- Verified https://prahl.dev returned HTTP 200 from Hostinger with Last-Modified Wed, 09 Sep 2026 02:30:08 GMT, which corresponds to Tuesday, September 8, 2026 at 10:30:08 PM EDT.
- Confirmed the live Alla Vostra page references build ID 4mEv3JXgzQ5LdSDwpuzsP and the deployed CSS contains the new Visual Hierarchy row-group, 310.5px image-width, and Step 6c rules.

Validation Summary

- npm run check passed with tsc --noEmit after the Visual Hierarchy row-group and CSS changes.
- Local Playwright with the system Chrome channel verified the collapsed Visual Hierarchy state in a 1440px wide viewport: only PRE-SCROLLING was visible before expansion, the button read Show More, and the hidden extra area had zero height and opacity 0.
- Local Playwright verified expanded wide mode: the button changed to Show Less, ON-SCROLLING and DURING SHOPPING row labels appeared in the expanded area, On-Scrolling Secondary top matched the Primary frame top, On-Scrolling Tertiary

bottom was within a fraction of a pixel of the Primary frame bottom, and During Shopping top/bottom alignment remained correct.

- Local Playwright verified portrait mode at 390px wide: PRE-SCROLLING was the only visible initial row, Show More expanded to ON-SCROLLING and DURING SHOPPING, and Show Less collapsed the extra content back to zero height.
- Local screenshot checks were captured for collapsed and expanded Visual Hierarchy states in wide and portrait layouts to sanity-check spacing, labeling, and clipping behavior.
- npm run build:static passed after the final source changes and produced the static export used for the official Hostinger deploy branch update.
- git status was clean after restoring next-env.d.ts and before the refreshed project snapshot was generated for this worklog pass.
- curl -I -L https://prahl.dev returned HTTP 200 with Hostinger response headers after the manual deploy branch push.
- curl checks against the live Alla Vostra page and deployed CSS confirmed the new build ID and Visual Hierarchy CSS rules were present on prahl.dev.
- pdftext and pdftotext were used before generation to compare the established worklog metadata and extracted-text conventions, and will be used again after writing this Part 2 artifact.

Files Touched and Artifacts

- app/projects/alla-vostra/ProductFlowSwitcher.tsx: added explicit Visual Hierarchy labelLines support, During Shopping primary/secondary/tertiary line-callout sets, Visual Hierarchy row labels and row groups, grouped PlaceholderStage rendering, visibleRowLimit support, shared step-stack rendering, preserved expanded step classes, shopping-overlay brace/callout routing, and Visual Hierarchy row-collapse wiring.
- app/globals.css: scaled During Shopping secondary/tertiary image frames, tuned Step 6b/6c top offsets, copied and adjusted Focal Point brace/header geometry, restored full-size line and green-header treatment on small shopping stacks, centered stack headers, added row-group CSS, rebased expanded ON-SCROLLING and DURING SHOPPING geometry, and added portrait row-group overrides.
- portfolio_PROJECT_SNAPSHOT.txt: refreshed by read_project.sh before this Part 2 PDF generation pass so the snapshot records the current tree, recent commits, public assets, deployment notes, PDF inventory, and post-deployment context.
- out/: regenerated by npm run build:static as the local static-export payload for the manual Hostinger deploy fallback; handled as a generated deployment artifact rather than a source-tree change.
- out/.git: created temporarily to commit and push the static export branch, resulting in hostinger-deploy commit 0bf918d on origin.
- next-env.d.ts: temporarily changed by static export and restored to the committed dev-server route import before the source-tree status was checked.
- portfolio_worklog_september8_part2.pdf: generated as this same-day Part 2 root-level Portfolio PDF worklog artifact following the established naming, style, metadata, and structure conventions.

Follow-Up Context

- The Visual Hierarchy section now behaves like the other UI Foundations sections: it initially shows the first stack group and lets the user expand more detail only when wanted.
- Future Visual Hierarchy stack edits should preserve the grouped-row model so row labels, step-specific classes, braces, pins, and custom CSS offsets remain connected in both collapsed and expanded states.
- Future During Shopping pin changes should preserve the accepted abbreviation set on

small stacks and the primary-like line/header scale, especially because shrinking labels was explicitly rejected during this pass.

- Future Pre-Scrolling and On-Scrolling placement work should preserve the current edge-alignment rule against the primary device frame and keep the Pre-Scrolling Tertiary stack centered between Secondary and Quaternary.
- The Alla Vostra page still defaults to UX Product Flow, so browser scripts must activate UI Foundations before searching for the Visual Hierarchy DOM.
- The Hostinger GitHub Actions static-export workflow is still failing quickly. Local static export succeeds, and the official public update was completed through the manual hostinger-deploy branch fallback.
- Hostinger can produce redirect or query-string noise during automated live checks; canonical trailing-slash HTML and deployed CSS checks confirmed the current public payload after the push.
- The public site at prahl.dev is currently tied to origin/hostinger-deploy commit 0bf918d, generated from source commit 61a318a.
- As usual, future source, PDF, or snapshot commits should wait for the user to ask for a commit message or explicitly request a commit/push cycle.

Output Artifact

- Generated: /Users/prahlin/gh/portfolio/portfolio_worklog_september8_part2.pdf
- Companion sync file: /Users/prahlin/gh/portfolio/portfolio_PROJECT_SNAPSHOT.txt
- Source state reviewed: 61a318ae14aca5d438a838188660a35004690eae on main and origin/main.
- Official deploy state reviewed: 0bf918d79c1775ef950948b72e0370a509bea980 on origin/hostinger-deploy, serving prahl.dev after the manual static-export fallback.
- Naming follows the user-confirmed same-date convention: portfolio_worklog_september8_part2.pdf. The existing portfolio_worklog_september8.pdf remains the earlier same-day worklog and was not renamed.
- The document records the September 8 Part 2 Alla Vostra Visual Hierarchy During Shopping scale, brace, pin, label, and alignment work; cross-row stack distribution; grouped Show More / Show Less behavior; local and static-export validation; official prahl.dev deployment; refreshed snapshot; and documentation work in the established Prahlin Portfolio worklog format.
