

Prahl Portfolio Work Log - September 11, 2026

Compiled summary for Friday, September 11, 2026 - focus: continuing the Prah.dev Portfolio Alla Vostra project-page refinement after the September 9 case-study architecture and section-reorganization pass, verifying the United States Eastern date, running the local Next.js site, studying the refreshed project snapshot and every pre-existing Portfolio PDF worklog, moving Visual Hierarchy Viewing Area annotations closer to their Primary device frames without changing stack centering, designing and implementing glass treatments for the UI Foundations / UX Product Flow switcher, replacing generic UI Foundations descriptions, standardizing screenshot magnification and nearest-header hiding, shortening and expanding hero technology chips, refining case-study summary and ownership copy, researching the official Alla Vostra Google Play listing and current production Android bundle, adding paired Google Play and App Store release grids, rebuilding the Overview composition around a 67/33 feature-image and narrative split, centering the release grids at 50/50, extending the three supporting promo images across the full section width, validating TypeScript and browser-rendered desktop/mobile geometry, recording the committed source state at d2cd710, refreshing the Portfolio project snapshot, and generating the September 11 Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after portfolio_worklog_september9.pdf and after the September 9 documentation state. The source state reviewed for this record is d2cd71027145c732e332c9d3f69878b81adab2d5 on main, matching origin/main after the source commit titled Refined Alla Vostra project page interactions, content, and release overview. No new Hostinger deployment, static-export branch update, production publish, or application-repository commit was performed during this record. The local documentation delta created before this PDF was the refreshed portfolio_PROJECT_SNAPSHOT.txt file; this PDF is the new September 11 root-level documentation artifact.

Source Materials Reviewed

- Verified the United States Eastern date with TZ=America/New_York date immediately before generation, which reported Friday, September 11, 2026 at approximately 8:54 PM EDT with UTC offset -0400. The worklog therefore uses September 11, 2026 rather than the September 12 UTC date visible in some remote response headers.
- Ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed portfolio_PROJECT_SNAPSHOT.txt, including project notes, source tree, public image and font inventories, worklog inventory, package and deployment configuration, git state, recent commits, current source dumps, and the standing instruction to ask for a commit message before committing or pushing.
- Extracted and studied all thirty-four pre-existing root-level Portfolio PDF worklogs with pdftotext: the July 11, 14, 15 Part 1, 15 Part 2, 16, 19, 20, 21, 22, 23, 24, 25, 29, 30, and 31 records; the August 1 Parts 1-3, August 3, 4, 5, 6, 10 Parts 1-2, 11, 12 Parts 1-2, 14, 16, and 24 records; and the September 7, September 8, September 8 Part 2, and September 9 records.
- Compared all prior PDFs for naming, title cadence, page dimensions, opening-summary density, section order, bullet-heavy technical voice, validation language, files-touched treatment, follow-up continuity, and output-artifact closure. The mature records consistently use a single non-part filename for the first worklog on a date and add part suffixes only for later same-day artifacts.
- Checked pdftinfo and pdffonts across the archive and used portfolio_worklog_september9.pdf as the closest chronological and structural baseline. The accepted output convention is US Letter at 612 x 792 points, PDF 1.4, Helvetica and Helvetica-Bold Type 1 fonts, and Codex author/creator/producer metadata.

- Reviewed git history and synchronization state through git log, git show --stat, git show --name-status, git status --short --branch, git rev-parse, git branch -vv, and git ls-remote. Confirmed main and origin/main both point to d2cd710 and that the source worktree was clean before the snapshot refresh.
- Reviewed the complete d2cd710 source commit and its commit message, including four modified application files, the refreshed snapshot, and twelve newly tracked glass-treatment mockup PNGs. The commit contains 394 insertions and 79 deletions across seventeen files.
- Reviewed the relevant source files directly: app/ScreenshotPreviewLayer.tsx, app/globals.css, app/projects/alla-vostra/ProductFlowSwitcher.tsx, app/projects/alla-vostra/page.tsx, package.json, read_project.sh, and the current /projects/alla-vostra route.
- Reviewed the official Google Play listing for package com.allavostra.app and the authenticated production Expo Application Services build record for version 1.0.3 / Android build version 4. Used the exact production AAB artifact headers to distinguish the 85,134,187-byte store bundle from Google Play's device-optimized download size.

Baseline Status Before September 11 Work

- The September 9 source and worklog state had reorganized the Alla Vostra case study around the current native commerce architecture, introduced a calmer UI Foundations / UX Product Flow switcher, removed redundant lower-page sections, and documented the current app and backend capabilities.
- The Visual Hierarchy Primary stacks across PRE-SCROLLING, ON-SCROLLING, and DURING SHOPPING were centered correctly, but the Viewing Area text and brace still sat slightly farther from the adjacent device frame or screenshot than requested.
- The UI Foundations / UX Product Flow switcher had the correct active/inactive hierarchy but used a flat transparent inactive treatment. The user wanted to explore see-through glass and water effects before selecting a restrained 0.5-opacity direction.
- UI Foundations Categories 00 through 05 still used placeholder-style description text. Categories 00 through 04 also needed to match Visual Hierarchy magnification behavior, with the important correction that the nearest contextual header should disappear rather than always hiding the white stack heading.
- The hero metadata chips used long compound labels that collapsed to one chip per row in super-narrow windows. The project summary and role copy also underplayed the original design work and the broader multi-rail commerce experience.
- The Overview section presented Play Store imagery and narrative copy but did not expose release metadata such as app version, release date, Android requirement, bundle size, or store category. It also had no corresponding App Store preparation grid.

Goals for September 11

- Verify the active United States Eastern date, study all prior Portfolio worklogs, refresh the project snapshot, and produce the next root-level PDF using the established non-part filename and document style.
- Move Viewing Area text and brace annotations five pixels closer to every Primary Visual Hierarchy frame while preserving the centering rules for the Primary stacks as complete compositions.
- Explore multiple inactive and active glass treatments through visual mockups, implement the selected 0.5-opacity inactive effect, soften its brightest highlight, and give the active dark-green state a cohesive but restrained glass finish.
- Replace all six UI Foundations section descriptions with short, section-specific copy chosen by the user and align screenshot magnification behavior across Colors & Theming through Controls & Inputs.
- Make magnification hide the nearest relevant green eyebrow or white stack header according to local hierarchy, without changing preview geometry or requiring category-specific event handlers.
- Shorten hero chips for narrow layouts, add missing store-preparation and platform-service signals, refine the hero summary, and explicitly credit original UI/UX design creation and implementation in the Overview role description.
- Research current official Google Play release information, communicate the distinction between store bundle and device-specific download size, and integrate factual release details into Overview without

overstating unpublished App Store data.

- Recompose Overview so the feature image and narrative use a 67/33 top-row split, the App Store and Google Play grids remain centered at 50/50 below, and the three promo images span the full content width without a neighboring divider.
- Validate the final experience with TypeScript, local route checks, desktop/tablet/mobile Playwright screenshots, width and overflow measurements, source-diff checks, and clean repository synchronization review.

Work Completed - Visual Hierarchy Annotation Positioning

- Adjusted the shared Visual Hierarchy Viewing Area brace and label shift variables by five pixels for the PRE-SCROLLING, ON-SCROLLING, and DURING SHOPPING Primary stacks.
- Applied the same five-pixel proximity change at the wide, portrait, and narrow responsive override points so the annotation remains consistently closer to the adjacent frame instead of snapping back at a breakpoint.
- Left the Primary stack centering properties untouched. The change altered only the local annotation offsets, preserving the accepted device, brace, white-line, and green-eyebrow composition as a centered whole.

Work Completed - Product Flow Glass Treatments and Mockups

- Generated three initial side-by-side mockups for the inactive transparent switcher state: Subtle Glass, Water Ripple, and Frosted Aqua. Each study preserved the current active treatment beside it for direct comparison.
- Generated three opacity variants of the selected first direction at 0.1, 0.5, and 1.0 strength, then implemented the chosen 0.5 treatment in the live UI.
- Reduced the distracting primary white highlight by approximately fifty percent and added two softer highlight zones, keeping the inactive button translucent while giving the surface more distributed glass depth.
- Generated three active dark-green glass mockups - Solid Rim, Soft Glass, and Water Sheen - juxtaposed against the latest inactive treatment, then implemented the accepted active treatment.
- Built the final CSS with layered radial and linear highlights, subtle border color, inset light and dark edges, controlled saturation and blur, and restrained shadows. The active and inactive states now share one material language without competing with the section content.
- Tracked twelve PNG study assets in mockups/: three initial inactive variants, three opacity exports, three active variants, and three combined comparison boards documenting the decision sequence.

Work Completed - UI Foundations Copy and Magnification

- Inspected the gray descriptions beneath all six UI Foundations headings, recommended three replacement descriptions per category, and implemented the user's selected option sequence 3, 1, 1, 3, 1, and 2.
- Added tailored copy for Colors & Theming, Typography & Spacing, Iconography & Imagery, Navigations, Controls & Inputs, and Visual Hierarchy instead of generating a generic category-title sentence at render time.
- Extended PlaceholderStage with previewVisualOnly support and marked Categories 00 through 04 so screenshot magnification targets the visible image frame while preserving the local surrounding layout.
- Refactored ScreenshotPreviewLayer from stack-level active state to nearest-header active state. The preview now searches the selected image group for a green flow-screen label first and falls back to the direct white stack h4 when no closer eyebrow exists.
- Replaced the previous broad stack selector with data-screenshot-preview-header-active, so only the contextually nearest header becomes invisible during hover or tap-and-hold magnification.
- Preserved Visual Hierarchy behavior because its image groups use white stack headers, while correcting Categories 00 through 04 to hide their closer green UI FOUNDATIONS eyebrow labels.

Work Completed - Hero Metadata and Case-Study Copy

- Split four long compound hero chips into compact technology and release labels, then expanded the final set to React Native, Expo 54, Stripe + PayPal, Serverless API, Play Store Prep, App Store Prep, EAS Builds, Postmark, Google Pay, and Apple Pay.
- Ordered the chip set so super-narrow 320px, 360px, and 390px layouts rarely leave a single chip stranded on a row while retaining the most important stack, payment, messaging, and release signals.
- Replaced the hero description with concise copy presenting Alla Vostra as a cohesive native experience spanning product browsing, multi-rail checkout, delivery validation, customer confirmations, and real-world release.
- Changed the Overview responsibility phrase from mobile UI implementation to original UI/UX design creation & implementation, accurately reflecting design authorship as well as front-end delivery.

Work Completed - Store Research and Overview Release Grids

- Visited the official Google Play listing for Alla Vostra Grazing Boards and confirmed package com.allavostra.app, version 1.0.3, release/update date August 24, 2026, Android 7.0 and up requirement, Food & Drink category, Everyone content rating, and Prahlin publisher identity.
- Confirmed the listing's current release notes cover improved display behavior for newer devices, tablets, and foldables; refined layout polish and checkout readiness; and updated production PayPal and Stripe payment support.
- Located the exact current production EAS store build for app version 1.0.3 and build version 4, then measured its AAB artifact at 85,134,187 bytes, displayed as 85.1 MB in the case study.
- Documented Play download as device-specific because Google Play generates optimized downloads from the Android App Bundle according to processor architecture, screen density, language, and required resources. The label describes varying download size, not limited smartphone compatibility.
- Added a compact Google Play release definition grid with Version, Released, Store bundle, Play download, Requires, and Category fields plus an Official listing link.
- Added an exact visual counterpart for App Store preparation to the left of Google Play, using clearly provisional TBD, Pending, and iOS TBD values so temporary content cannot be mistaken for a published Apple listing.
- Centered the paired release area as two equal 50/50 grids. Placed the shared center divider exactly on the page midpoint and applied equal inner spacing to both release columns.

Work Completed - Overview Composition and Responsive Layout

- Iterated the Overview composition from the original image-left/copy-right arrangement through a full-width vertical study, then settled on a desktop 67/33 top-row split that gives the Play Store feature image two-thirds of the available row and the narrative one-third.
- Kept the Overview heading full-width above the split and removed the old copy-panel left border and padding so the narrower narrative receives its complete one-third allocation.
- Moved the three supporting Play Store promo screenshots outside the narrative panel, removed the divider that had appeared beside them, and expanded the row from the left shell edge to the right shell edge.
- Updated responsive image size hints for the larger supporting screenshots and preserved their stable three-across aspect-ratio layout on desktop and narrow mobile screens.
- Kept the release grids paired through desktop and intermediate widths, switched their internal facts from three columns to two where needed, and stacked App Store above Google Play on phone-width layouts.
- Preserved the final content order as Overview heading, 67/33 feature image and narrative, centered 50/50 store-release grids, and the full-width three-image promo strip.

Work Completed - Cache Handling, Validation, and Commit Context

- Cleared generated Next.js cache output and restarted the local development server when Turbopack served updated markup with stale compiled CSS. Moved generated .next output into timestamped /tmp

locations rather than touching source files.

- Kept the local Next.js route available at <http://127.0.0.1:3000/projects/alla-vostra> throughout final review and restarted it cleanly after cache refreshes.
- Provided the requested commit-message recommendation with one past-tense header and nine literal hyphen-led lines covering interaction, mockup, copy, magnification, annotation, hero, release, Overview, and snapshot work.
- Recorded the resulting source commit d2cd710, Refined Alla Vostra project page interactions, content, and release overview. Confirmed the commit includes all application changes, all twelve mockup assets, and the refreshed snapshot state.
- Confirmed main and origin/main match at d2cd710. No commit or push was performed by the worklog-generation pass itself, preserving the project's explicit commit-message approval convention.

Validation Summary

- Ran npm run check after the interaction, copy, hero, release-grid, and final Overview layout changes; TypeScript completed successfully with tsc --noEmit.
- Ran git diff --check during the source work and confirmed no whitespace errors in the final application changes.
- Used Playwright against the local Alla Vostra route at 1440px desktop, 800px intermediate, 360px mobile, and 320px narrow viewports. Captured section screenshots and inspected the rendered composition after each material layout transition.
- Measured the final desktop top row at approximately 757px for the feature image and 379px for the narrative after the existing 44px gap, matching the requested two-thirds / one-third allocation.
- Measured both release grids at 590px on the 1180px desktop shell, with their split axis at the exact 720px viewport midpoint. Confirmed the release area and supporting promo row both span the complete 1180px content width.
- Confirmed the three supporting promo images render at equal widths across the full row and no longer inherit or sit beside the Overview copy divider.
- Confirmed the 360px and 320px passes reported zero document-level horizontal overflow; feature image, narrative, release grids, and promo strip all matched their mobile shell widths.
- Verified the glass controls, release facts, external listing link, responsive dividers, text wrapping, and screenshot-preview header behavior through local browser inspection.
- Reviewed final git history and synchronization state after source commit d2cd710. The worktree was clean before read_project.sh refreshed portfolio_PROJECT_SNAPSHOT.txt for this documentation pass.

Files Touched and Artifacts

- app/ScreenshotPreviewLayer.tsx - added visual-only preview targeting and replaced broad stack-level header hiding with nearest contextual header selection and cleanup.
- app/projects/alla-vostra/ProductFlowSwitcher.tsx - added the six accepted UI Foundations descriptions, previewVisualOnly support, and category wiring for corrected magnification behavior.
- app/projects/alla-vostra/page.tsx - shortened and expanded hero chips, refined hero and role copy, added Google Play facts and provisional App Store facts, linked the official Play listing, and reorganized the Overview release and promo markup.
- app/globals.css - implemented active/inactive glass surfaces, moved Viewing Area annotations five pixels closer across responsive modes, added release-grid styling, created the final 67/33 Overview split, centered the 50/50 release pair, and expanded promo imagery full width.
- mockups/01-subtle-glass.png, 02-water-ripple.png, and 03-frosted-aqua.png - recorded the initial inactive switcher material directions.
- mockups/v1-opacity-010.png, v1-opacity-050.png, and v1-opacity-100.png - recorded the selected glass direction at three requested opacity strengths.
- mockups/active-01-solid-rim.png, active-02-soft-glass.png, and active-03-water-sheen.png - recorded three active dark-green glass studies beside the accepted inactive treatment.
- mockups/alla-vostra-toggle-glass-water-mockups.png,

- alla-vostra-toggle-subtle-glass-opacity-mockups.png, and alla-vostra-toggle-active-glass-mockups.png - preserved the combined comparison boards used during selection.
- portfolio_PROJECT_SNAPSHOT.txt - refreshed through read_project.sh before this PDF generation so the snapshot captures the current tree, d2cd710 source state, PDF inventory, source dumps, and standing project instructions.
- portfolio_worklog_september11.pdf - generated as this session's root-level dated documentation artifact.

Follow-Up Context

- The final Overview desktop structure intentionally uses a 67/33 feature-image and narrative split above two centered 50/50 release grids. Future top-row ratio changes should not accidentally transfer into the equal release-grid columns.
- The App Store grid is explicitly provisional. Replace TBD, Pending, and iOS TBD values only after an official listing or verified production build provides publishable facts.
- The Google Play 85.1 MB value is the production Android AAB upload bundle, not a universal user download. Keep Play download labeled as device-specific or varies by device unless a specific device configuration is being measured.
- UI Foundations Categories 00 through 04 intentionally use visual-only magnification and hide the nearest green eyebrow. Visual Hierarchy continues to hide its white stack heading because that is the nearest available header in those groups.
- The switcher glass treatment is deliberately restrained. Future highlight edits should preserve the softened primary white spot and distributed secondary highlights rather than returning to one dominant bright glare.
- Turbopack served stale compiled CSS during rapid iteration even after source updates. If browser output again omits newly added selectors, move the generated .next directory to /tmp and restart the local server before changing valid source rules.
- No Hostinger deployment or hostinger-deploy branch update was performed for d2cd710 during this record. The remote hostinger-deploy branch remains at 1373349 until a later explicit deployment request.
- As with all prior Portfolio work, future source, snapshot, PDF, commit, push, deployment, or publish actions should remain scoped to the user's direct request, and commit/push work should first obtain the desired commit message.

Output Artifact

- Generated: /Users/prahlin/gh/portfolio/portfolio_worklog_september11.pdf
- Companion sync file: /Users/prahlin/gh/portfolio/portfolio_PROJECT_SNAPSHOT.txt
- Source state reviewed: d2cd71027145c732e332c9d3f69878b81adab2d5 on main and origin/main.
- Naming follows the established root-level Portfolio convention: portfolio_worklog_september11.pdf. No Part suffix was used because no earlier September 11 Portfolio worklog PDF existed.
- The document records the September 11 Alla Vostra annotation, glass-control, UI Foundations copy, screenshot-preview, hero metadata, official Play Store research, release-grid, Overview composition, responsive validation, cache, commit, snapshot, and documentation work in the established Prahlin Portfolio worklog format.
- This worklog closes the September 11 documentation pass. No source commit, push, deployment, or Hostinger synchronization was performed as part of generating the PDF.
