

Prahlín Portfolio Work Log - July 16, 2026

Compiled summary for Thursday, July 16, 2026 - focus: continuing the dedicated Alla Vostra case-study page, refreshing Portfolio project context, capturing new Android Small and Android Large app screenshots, correcting small-device capture chrome, expanding Browse screenshots, renaming overlay/prompt stacks, adding collapsible screenshot sections, tuning mobile portrait defaults, improving tap-hold screenshot preview behavior during scroll, and pushing the committed work through the official public website pipeline.

Generated in continuity with the established Prahlín Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers only Prahlín/portfolio work performed for July 16, 2026: the session-start project snapshot review, screenshot and AVD capture workflow, commit babed15a74b5083bbb9870d18d44ac1b30bcf48b, successful push to origin/main, successful Hostinger static-export workflow run, and this worklog-generation step. The Alla Vostra app repo is referenced only where it supported screenshot capture.

Source Materials Reviewed

- Ran `./read_project.sh` at the beginning of the session and reviewed `portfolio_PROJECT_SNAPSHOT.txt`, including project notes, source tree, code dumps, asset inventory, PDF inventory, deployment notes, recent commits, and the standing commit-message convention.
- Reviewed all pre-existing Portfolio root-level worklogs: `portfolio_worklog_july11.pdf`, `portfolio_worklog_july14.pdf`, `portfolio_worklog_july15_part1.pdf`, and `portfolio_worklog_july15_part2.pdf`.
- Extracted text from all four Portfolio worklog PDFs with `pdftotext` to preserve the established title cadence, section order, validation language, files-touched list, follow-up context, and output-artifact close.
- Checked PDF metadata and page counts with `pdftinfo`. The prior Portfolio artifacts use letter-size pages, root-level filenames, compact five-to-six page bodies, and the standard-library PDF-generator metadata used by the July 14 and July 15 logs.
- Reviewed the July 16 Git scope through `git log`, `git show --stat`, `git show --name-status`, and targeted diffs for `app/ScreenshotPreviewLayer.tsx`, `app/globals.css`, `app/page.tsx`, `app/projects/alla-vostra/page.tsx`, and `app/projects/alla-vostra/ExpandableFlowStacks.tsx`.
- Reviewed the new `public/images` assets and confirmed their Android capture dimensions with sips: 720x1280 for Android Small and 1440x3120 for Android Large.
- Reviewed the supporting Alla Vostra `AppHeader.js` diff that corrected small-device capture chrome, while keeping that external repo change separate from the Portfolio commit.
- Checked local/remote state after push: `main` and `origin/main` both resolved to `babed15`, and `gh run list` reported the Build static export for Hostinger workflow completed successfully for that push.

Baseline Status Before July 16 Work

- The July 15 Part 2 Portfolio site already had a dedicated `/projects/alla-vostra` route with a serious full-stack mobile commerce case-study structure and paired Product Flow screenshots.
- The Browse stage still leaned on the earlier Shop Preview and Products naming and did not yet show a fuller Home, Products, About Us, Contact, and Shop browsing sequence.
- Product-specific overlay captures for Buon Natale, Sei Perfetto, and Piccola were not yet parked in `public/images` with product-specific filenames.

- Android Small captures initially had incorrect whitish native top/bottom bars, and the app's orange header could clip into the white top navigation area during capture.
- The growing screenshot library made Browse and Customer Details feel dense, especially on mobile web portrait where two default stacks per category consumed too much vertical space.
- The screenshot preview layer hid tap-hold previews during scroll, and the standalone Product Flow launch image still magnified even though the user wanted that standalone image excluded.
- The public deployment path remained the GitHub-backed Portfolio main branch, with GitHub Actions building main into hostinger-deploy for Hostinger public_html.

Goals for July 16

- Refresh project context by reading the Portfolio snapshot and all Portfolio worklogs before making additional changes.
- Load Android Small and Android Large AVDs with Alla Vostra and capture product overlay screenshots for Buon Natale, Sei Perfetto, and Piccola.
- Correct Android Small screenshot chrome so the native bars match the pre-existing orange/brown treatment, not the incorrect whitish bars.
- Capture Android Small and Android Large versions of Home, Products, About Us, and Contact when prompted, save them under public/images, and follow the requested screen_screen_size naming pattern.
- Incorporate the new Small/Large Browse screen stacks into the Alla Vostra project page, preserving the Shop stack and placing it last.
- Rename lower Product Flow stacks so labels clearly distinguish overlays and prompts: Address Input, Contact Input, Payment Method, Payment Input Prompt, and Order Placed Prompt.
- Reduce screenshot overload with expandable sections, then tune mobile portrait so categories 2 through 6 show one stack by default before the More button.
- Keep tap-hold screenshot magnification large during mobile web portrait scrolling until release, while excluding the standalone Product Flow launch screenshot from magnification.
- Commit with the user-approved past-tense message and push to the official public website path after confirming main is the existing deployment source.

Work Completed - Project Context and AVD Capture

- Ran and read the Portfolio project snapshot, then read the full Portfolio worklog series in order before starting the July 16 implementation pass.
- Loaded Android Small and Android Large AVDs with Alla Vostra for capture work tied to the Portfolio case-study page.
- Captured product overlay states for Buon Natale and Sei Perfetto on both Android Small and Android Large, then saved product-specific files into public/images.
- Retook the Android Small Buon Natale and Sei Perfetto captures after identifying that the first Small versions had incorrect whitish native system bars.
- Captured and added the Piccola Small product overlay while preserving the Large Piccola asset through the rename from products_overlay_large.png to products_overlay_piccola_large.png.
- Adjusted Alla Vostra AppHeader.js outside the Portfolio repo so the small-device orange header no longer clipped into the white top navigation during capture.
- Captured synchronized Small and Large screenshots for Home, Products, About Us, and Contact when the user called NOW, then copied them into public/images with the requested filenames.

- Confirmed the new screen and overlay captures use the established Android Small and Android Large dimensions used by the rest of the Portfolio screenshot set.

Work Completed - Browse and Product Flow Restructuring

- Updated the Alla Vostra Browse stage to present five paired Small/Large stacks: Home Screen, Products Screen, About Us Screen, Contact Screen, and Shop Screen.
- Restored the Shop stack after the user noticed it had been removed, and placed it last in the Browse category.
- Changed Browse copy so it describes the broader browsing surfaces: brand, product catalog, company story, inquiry path, and shop entry.
- Updated the Alla Vostra project-page hero showcase and the landing-page Alla Vostra card miniature to use products_screen_small.png rather than the older products_overlay_small.png path.
- Kept the Buon Natale, Sei Perfetto, and Piccola product overlay screenshots in public/images as prepared standalone assets, while the visible Browse stacks use broader screen-level captures.
- Renamed Details to Customer Details and carried that wording into the matching expand/collapse button label.
- Renamed lower stacks to the user-approved labels: Address Input Overlay, Contact Input Overlay, Payment Method Overlay, Payment Input Prompt, and Order Placed Prompt.
- Kept Empty Cart Overlay, Filled Cart Overlay, Order Confirmation Overlay, and the overall Launch/Browse/Cart/Details/Payment/Confirmation stage sequence intact.

Work Completed - Expandable Sections and Mobile Defaults

- Added app/projects/alla-vostra/ExpandableFlowStacks.tsx as a reusable client component for paired screenshot stacks with grow/collapse controls.
- Used lucide ChevronDown and ChevronUp icons, aria-expanded, aria-controls, and useId so the expandable controls remain accessible.
- Added global CSS for the toggle row, toggle button, hidden extra-stack wrapper, open state, max-height/opacity/transform transitions, pointer-events control, and reduced-motion fallback.
- Implemented Browse defaults so Home Screen and Products Screen show first, with About Us, Contact, and Shop behind More Browse Screens.
- Implemented Customer Details defaults so Address Input Overlay and Time and Date Overlay show first, with Contact Input Overlay behind More Customer Details Screens.
- Removed the word Show from the Browse button label, leaving More Browse Screens and Hide Browse Screens.
- Extended the component to all Product Flow groups while preserving desktop behavior: Browse and Customer Details show two stacks, while Cart, Payment, and Confirmation show all stacks on wider screens.
- Added the mobile portrait matchMedia override so Browse, Cart, Customer Details, Payment, and Confirmation each show one stack by default before a More button on mobile web portrait.

Work Completed - Screenshot Preview Behavior

- Updated app/ScreenshotPreviewLayer.tsx so touch pointerdown no longer calls preventDefault, allowing the page to scroll while a tap-hold preview is active.
- Added touch-aware pointercancel handling so touch cancellations do not immediately hide an active preview, while non-touch pointer cancellation still releases it.

- Added touchend handling so the preview hides when the active touch ends and there are no remaining touches.
- Changed scroll handling so active touch previews stay visible during scroll, while mouse hover previews still hide on scroll when no touch pointer is held.
- Removed data-screenshot-preview from the standalone Product Flow launch screenshot so it no longer magnifies on desktop hover or mobile tap-hold.
- Preserved screenshot-preview behavior for the paired Product Flow stack images, where explicit data-screenshot-preview remains intentional.
- Answered the screenshot-density question by recommending curated asset/App Store sections rather than adding every possible screenshot, then used collapsible groups to keep the current proof set manageable.

Work Completed - Commit, Push, and Public Website Path

- Asked for and received the user-approved long commit message, then revised it to past tense at the user's request before committing.
- Staged the Portfolio website changes and screenshot assets while deliberately leaving portfolio_PROJECT_SNAPSHOT.txt and the unrelated public/images/martin-profile.png deletion out of the commit.
- Committed the final July 16 Portfolio website work as babed15 with the subject Updated Alla Vostra case study screenshots and mobile flow presentation.
- Confirmed with the user that origin/main was the correct path for the official public website deployment, matching the existing Portfolio convention.
- Pushed main to origin/main. The push advanced the public source branch from ccd78cb to babed15, and the Hostinger static-export workflow completed successfully.

Validation and Checks Performed

- Ran npm run check after the implementation work; TypeScript completed successfully.
- Confirmed local HTTP 200 responses from http://127.0.0.1:3000/projects/alla-vostra while the local Next server was available.
- Used headless Chrome through the DevTools protocol to validate the 390x844 mobile portrait default state: Browse, Cart, Customer Details, Payment, and Confirmation each showed exactly one visible stack plus a More button.
- Used the same browser-level check at 1280x900 desktop width to confirm the prior desktop behavior remained intact: Browse and Customer Details showed two stacks, while Cart, Payment, and Confirmation showed all stacks without extra buttons.
- Used a touch-drag smoke test in a mobile portrait browser context to confirm tap-hold preview stayed visible while the page scrolled and disappeared after release.
- Confirmed the new public/images captures had expected AVD dimensions with sips.
- Checked git status before committing and after pushing; babed15 excluded the modified snapshot and unrelated martin-profile deletion.
- Checked gh run list and confirmed the Hostinger static-export workflow for babed15 completed successfully.

Files Touched During July 16 Portfolio Work

- app/ScreenshotPreviewLayer.tsx - improved mobile tap-hold preview behavior so magnification survives scroll until release.
- app/globals.css - added expandable screenshot-section styling, transitions, toggle-button layout, and reduced-motion handling.
- app/page.tsx - updated the Alla Vostra landing-page product miniature to products_screen_small.png.

- app/projects/alla-vostra/ExpandableFlowStacks.tsx - new client component for reusable Small/Large screenshot stacks with grow/collapse controls and a mobile portrait stack-count override.
- app/projects/alla-vostra/page.tsx - expanded Browse stacks, renamed lower Product Flow stacks, routed all screenshot groups through ExpandableFlowStacks, updated products screenshot paths, and removed standalone launch screenshot magnification.
- public/images/home_screen_small.png, home_screen_large.png, products_screen_small.png, products_screen_large.png, about_us_screen_small.png, about_us_screen_large.png, contact_screen_small.png, and contact_screen_large.png - new Browse screen captures.
- public/images/shop_preview_screen_small.png and shop_preview_screen_large.png - renamed Shop screen captures from the previous generic shop_preview_small/large filenames.
- public/images/products_overlay_buon_natale_small.png, products_overlay_buon_natale_large.png, products_overlay_sei_perfetto_small.png, products_overlay_sei_perfetto_large.png, products_overlay_piccola_small.png, and products_overlay_piccola_large.png - product-specific overlay captures.
- public/images/products_overlay_small.png - removed from the committed tree after visible page references moved to products_screen_small.png and product-specific overlay names.
- portfolio_PROJECT_SNAPSHOT.txt - regenerated at the beginning of the session and left modified locally, but not included in babed15.
- portfolio_worklog_july16.pdf - this new July 16 Portfolio worklog artifact generated at the repository root.

Follow-Up Context

- Commit this July 16 PDF only after the user provides or confirms the desired commit message, preserving the Portfolio project's commit-message convention.
- Regenerate portfolio_PROJECT_SNAPSHOT.txt after this PDF if the snapshot should include babed15, the new screenshot inventory, and portfolio_worklog_july16.pdf.
- Decide whether the parked Buon Natale, Sei Perfetto, and Piccola overlay assets should remain standalone public assets only or gain a curated product-overlay section later.
- If a Play Store / App Store section is added, keep it curated so the case study does not become a raw screenshot dump.
- Resolve the unrelated local deletion of public/images/martin-profile.png before any future broad git add, because it remained outside babed15 and may or may not be intentional.
- Resolve the supporting Alla Vostra AppHeader.js change separately in the Alla Vostra repo if the small-device header correction should become permanent app code rather than capture support.
- Continue testing mobile portrait after any new screenshot stacks are added, because the one-stack default now keeps categories 2 through 6 scannable on mobile web.

Output Artifact

- Generated file: portfolio_worklog_july16.pdf.
- Location: /Users/prahlin/gh/portfolio/portfolio_worklog_july16.pdf.
- Naming follows the existing root-level Portfolio convention: portfolio_worklog_july16.pdf. No part suffix was used because this is the first July 16 Portfolio worklog artifact.
- Uses the same daily worklog structure and compact technical voice established by the July 11, July 14, and July 15 Portfolio PDF worklogs.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this artifact.
