Prahlin Portfolio Work Log - November 2, 2026

Compiled summary for Monday, November 2, 2026 - focus: continuing the Prahl.dev Portfolio after the November 1 UI / UX, workflow, and hero record; explicitly verifying the United States Eastern date after the daylight-saving transition; running the customary project reader; extracting and studying the complete pre-existing PDF worklog archive; finishing product-flow language for the UX philosophy carousel; standardizing the UI, UX, and workflow A / B / C selectors around compact merged auto-navigation; extending synchronized three-second fades across headlines, project labels, images, and background glyphs; rebuilding workflow tabs, gradients, dividers, and active-third framing; expanding the landing-page development stack with official technology marks; documenting Alla Vostra's live dual-store release; adding a full-page sticky landing navigation; and turning Productivity Hacks into five color-coded, hover-focused cards with card-local autoplay and initial shortcut / automation content.

Generated in continuity with the established Prahlin Portfolio worklog format: compact opening summary, source-material review, baseline and goals, feature-grouped implementation details, committed-source sequence, validation, files and artifacts, follow-up notes, and output-artifact close. The record preserves the archive's dense technical voice, repository evidence, dated footer treatment, and explicit separation between committed source, local verification, ancillary repository documentation, and public deployment state.

Coverage begins after portfolio_worklog_november1.pdf and documentation commit b144caf. Four Portfolio source commits completed November 2: 8cddaa0, b8a22ff, 24cd149, and f64f4b9. At documentation time, HEAD, main, origin/main, and origin/HEAD all resolve to f64f4b921f393ac4ff2d227b43bb4f665c4278ed. The refreshed portfolio_PROJECT_SNAPSHOT.txt is the only modified Portfolio file before this PDF is added. The Alla Vostra repository also contains a local DEPLOYMENT_LOG.md update documenting the October 26 App Store release; that ancillary change remains uncommitted. No successful Hostinger build or public deployment occurred because GitHub Actions refused to start the jobs while the account was locked for a billing issue.

Source Materials Reviewed

- Date verification: checked an external UTC-05:00 clock at 9:57 PM, which reported Monday, November 2, 2026. This agrees with America/New_York after Eastern daylight time ended on November 1, so the record correctly uses November 2 and EST rather than UTC-04:00.
- Project reader: ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt with current source, assets, repository state, deployment notes, PDF inventory, and standing instructions.
- Worklog archive: enumerated and extracted all 59 pre-existing root-level Portfolio PDFs with pdftotext, from portfolio_worklog_july11.pdf through portfolio_worklog_november1.pdf. Before this artifact, the archive contained 327 pages and approximately 170,702 extracted words.
- Archive comparison: cross-checked every PDF's title, filename, page count, opening summary, section sequence, feature-grouped bullet treatment, validation language, files-touched record, follow-up continuity, output-artifact close, dated footer, and page numbering. Read November 1 in full and used October 22, October 18, September 29 Part 2, and representative July and August entries as visual and structural baselines.
- PDF conventions: confirmed US Letter portrait at 612 x 792 points, black Helvetica-family text on white, compact margins, bold section headings, a dated first-page title, repeated dated footers, right-aligned page numbers, and Codex metadata.
- Repository evidence: reviewed the four November 2 commit subjects, bodies, timestamps, statistics, and synchronized refs; inspected the current carousel, workflow, stack, Productivity Hacks, Alla Vostra case-study, navigation, dependency, and remote-image source; and reviewed the generated snapshot.
- Ancillary evidence: inspected /Users/prahlin/gh/alla_vostra/DEPLOYMENT_LOG.md, its current diff, App Store release lineage, remaining payment-environment caution, and the uncommitted Alla Vostra snapshot outputs.
- Deployment evidence: queried GitHub Actions for the four November 2 pushes and inspected run 41569217684. Each Hostinger workflow concluded failure without executing steps because the GitHub account was locked for a billing issue.

Baseline Status Before November 2

- The November 1 baseline already contained five UI / UX stacks, complete UI A / B / C variants, image-backed workflow stages, exclusive workflow focus, 45 licensed workflow images, and a prismatic hero. UX-specific flow titles and complete first-pass UX headline language still needed refinement.
- UI / UX and workflow selectors still used larger lettered controls and inconsistent cycle / fade behavior. Workflow header pairs, gradient seams, divider visibility, and active-subsection borders required continued iteration.
- The development-stack section still summarized broad categories in prose. It did not yet enumerate the actual cross-platform, backend, payment, messaging, native, build, and store-release technologies with reusable marks.
- The Portfolio Alla Vostra case study still described App Store preparation rather than the now-live October 26 release, and its release evidence did not yet include the public listing facts or five native App Store screenshots.
- Productivity Hacks remained a visual placeholder with generic titles, filler descriptions, hollow indicators, and no focused motion or content-specific autoplay.

Goals for November 2

- Complete the UX philosophy's product-flow taxonomy and initial headlines without duplicating UI-carousel concepts.
- Give UI, UX, and workflow carousels one compact merged selector language, a consistent three-second cycle, and synchronized content fades.
- Preserve the workflow's five-tone identity while repairing tab geometry, background continuity, divider neutrality, and active-third framing.
- Replace stack prose with a credible, logo-supported inventory grounded in the actual Portfolio, Cinerific, and Alla Vostra work.
- Bring Alla Vostra release documentation up to the live dual-store state and retain evidence-based payment cautions.
- Introduce a sticky landing navigation and begin converting Productivity Hacks from placeholders into interactive, card-local A / B / C content.

Work Completed - UX Product-Flow Language

- Renamed the five UX stacks around application-flow segments rather than general interface traits: Orientative, Discoverable, Selectable, Executable, and Conclusive. The wording intentionally presents each stack as an adjective describing how that product-flow phase should behave.
- Established the first Orientative headline as Warm / Inviting / OPEN To The User. The wording evolved from Welcoming and Onboarding experiments while avoiding repetition of the UI carousel's appearance-first ideas.
- Set Discoverable to Fun / Whimsical / CURIOUS At Every Turn, including the requested emphasis treatment for CURIOUS.
- Set Selectable to Personal / Assured / PRODDING Without Pressure; Executable to Solid / Efficacious / WITHOUT Hoop-Jumping; and Conclusive to Final / Resolute / CLOSURE-Ensuring By The End.
- Preserved open B and C positions for later UX copy work rather than filling them with speculative text. The user explicitly deferred those variants after establishing the A language.

Work Completed - Unified UI / UX Carousel Autoplay

- Replaced the separated A, B, and C square controls with a single merged segmented bar. Removed visible letters from the compact controls and filled only the active third with the current stack's purple, yellow, blue, orange, or green tone.
- Reduced the merged bar vertically in two passes, removed horizontal gaps between segments, and centered the selector against the first headline row.
- Added indefinite active-stack-only autoplay. The cycle moved from an initial workflow-derived pace through two seconds to the accepted three-second interval.
- Changed abrupt swaps into synchronized fades for headlines, screenshots / device frames, project names, selector state, and low-visibility background glyphs. Extended fade-in and fade-out windows without changing the final three-second cycle, leaving a shorter full-opacity dwell.
- Removed the device-side micro-description headers while explicitly preserving PROJECT: X labels and routes.
- Restored the Alla Vostra image in UI stack 01 C after it was displaced during experimentation.
- Replaced the large repeated numeric background glyphs with low-visibility A, B, and C letters that follow the active variant. Their maximum opacity intentionally remains very faint rather than becoming a second focal point.
- Applied the final selector, timing, fade, image, project-name, and background-letter behavior across UI stacks 01 through 05 and UX stacks 01 through 05.
- Preserved manual selection, accessibility state, case-tone mapping, device variants, and responsive carousel geometry while consolidating the active-detail behavior.

Work Completed - Workflow Selector and Timing Unification

- Replaced all 15 workflow A / B / C controls with the same compact merged bars used by UI / UX. Kept their absolute selector size equal to the philosophy carousel rather than allowing the workflow layout to enlarge them.
- Moved workflow autoplay to the same three-second cycle and synchronized image fades to selector movement. Only the active point within the active workflow stage continues to cycle; all unrelated selectors remain paused.
- Retained smooth 1.08-second image transitions within the three-second interval, matching the calmer UI / UX fade cadence rather than snapping between frames.
- Preserved the existing exclusive workflow focus controller, manual selection behavior, reduced-motion handling, and event isolation while changing only the selector presentation and timing.

Work Completed - Workflow Tabs, Gradients, and Active Thirds

- Removed the horizontal gap between each stage number box and header-name box, treating 01 / RESEARCH through 05 / RELEASE as one paired header stack.
- Repositioned the five paired stacks into the requested alternating pattern: 01 left, 02 center, 03 right, 04 center, and 05 left.
- Standardized each number box to 11 percent and each header-name box to 22.33 percent of the usable center width, producing an exact one-third combined footprint. Removed lower number-box corner rounding to match the attached header tabs.
- Removed top and side borders from the colored star-gradient header strips while retaining the intended content-top boundary. Iteratively eliminated residual seams from masks, pseudo-elements, and number / title box bottoms.
- Restored stage-specific border color values from the UI / UX palette without recoloring the neutral vertical background dividers.
- Prevented divider masks from clipping leftmost or rightmost active gradients and added position-aware left, right, or paired borders around the active workflow third.
- Kept all three one-third background surfaces equally visible within the active stage. Only the focused point's title, image, and auto-nav indicator reach full opacity; the other two content stacks remain subdued, while the border logic continues to outline only the active third.

Work Completed - Development Stack Rebuild

- Replaced three prose paragraphs with one-term-per-row capability lists and coordinated purple, blue, and green card surfaces derived from the established five-tone landing palette.
- Renamed the cards Cross-platform core, Backend & services, and Platform-native & release. Renamed the section My Dev Stack and changed its green eyebrow from STACK to HOW I ROLL; also renamed UI / UX Philosophy to My UI / UX Philosophy.
- Expanded Cross-platform core to React + React Native, TypeScript, JavaScript, HTML, Expo + Expo Router, Next.js, Tailwind CSS, SVG + React Native SVG, Motion for React, and React Native Reanimated.
- Expanded Backend & services to Node.js, Vercel Serverless Routes, Server-side Validation, Stripe RN + PaymentIntents / Webhooks, PayPal REST, Postmark Messaging, and Postman.
- Expanded Platform-native & release to Kotlin, Swift, Jetpack Compose, Gradle, Android Studio + Emulator / AVD, ADB, EAS Build + Submit, Google Play AAB, and App Store IPA.
- Added simple-icons 16.36.0 and built a reusable StackTerm renderer for Simple Icons, project image assets, Lucide symbols, optional strokes, and the official Postmark stamp geometry. Reused the Portfolio's official Google Play triangle and App Store mark.
- Improved legibility for black or dark marks: Vercel received a thin dark internal outline treatment, PayPal received a brighter cyan fill, and Gradle received a softer cyan treatment rather than an oversized white stroke.
- Removed Android Studio, Android Emulator / AVD, ADB, and Postman duplicates from the Work Tools inventory after relocating them into the more relevant stack cards.

Work Completed - Alla Vostra Dual-Store Evidence

- Updated the featured Alla Vostra case-study summary and tags from release-ready language to live Google Play and App Store delivery.
- Replaced the App Store search URL and pending placeholders with the official listing at apps.apple.com/us/app/alla-vostra/id6815443745.
- Recorded App Store version 1.0, submitted binary 1.0.4 build 4, October 26 public release date, 47.3 MB download size, and iOS 15.1 minimum. Updated Google Play to version 1.0.4 with the September 17 update date.
- Added the five official native iPhone screenshots from Apple's image host and extended Next.js remote-image configuration for is1-ssl.mzstatic.com. Rebuilt the gallery as five responsive columns with horizontal overflow on narrow screens.
- Rewrote ownership, architecture, decision, readiness, timeline, stack, and closing copy around physical-iPhone QA, TestFlight validation, EAS Submit, signed IPA delivery, App Review, and completed dual-store release.
- Updated /Users/prahlin/gh/alla_vostra/DEPLOYMENT_LOG.md with the October 26 public release, release lineage, public evidence, listing facts, and remaining operational follow-up. Explicitly preserved the warning that build 4 was documented with Stripe sandbox / test configuration and that production iOS payment behavior must be reverified.
- Kept the ancillary Alla Vostra deployment-log and regenerated snapshot changes uncommitted; no Alla Vostra source build, store submission, or payment test was performed during this Portfolio pass.

Work Completed - Sticky Landing Navigation

- Moved the landing navigation outside the hero into a dedicated full-page sticky frame while preserving its original 24-pixel top position.
- Reserved the original navigation height so the hero composition does not jump at scroll start. Added responsive height calculations for the two-row navigation below 980 pixels.
- Kept the bar pinned at the same top offset throughout downward scrolling and allowed it to settle naturally into its original above-hero position only at scrollY zero.
- Moved the #top anchor to the landing main element so the brand link returns to the true page top rather than stopping at the hero below the sticky frame.
- Verified computed top position, height, and return behavior at 1280 x 800 and 390 x 844 viewports using headless Chrome.

Work Completed - Productivity Hacks Interaction and Content

- Replaced the three hollow indicator boxes in every hack card with the compact merged UI / UX auto-nav bar. Preserved the original seven-pixel height and responsive footprint while applying each card's purple, yellow, blue, orange, or green gradient.
- Shortened the five titles to Shortcuts, Automation, Terminal, System, and Tuning. Corrected System's core accent from yellow to the established orange #FF9A24.
- Matched card titles to the 24-pixel Dev Stack title size and vertically centered each title against its icon. Released descriptions from the narrow title-side column so copy can span the full padded card width.
- Repositioned auto-nav bars to the left content edge without crossing card padding, then moved them beneath the image-placeholder boxes. Preserved measured widths of 114 pixels on desktop and 181 pixels at the tested mobile size.
- Matched hack description typography to Dev Stack text at 16 pixels, 1.6 line height, and #B8C9BF.
- Added low-versus-high visibility and motion: every card rests at 50 percent opacity; only the directly hovered card reaches full opacity, strengthens its colored border and glow, and lifts two pixels. No viewport-center state activates a card.
- Scoped autoplay to the hovered card only. Its indicator advances every three seconds; all other cards remain paused. Releasing hover returns the card to low visibility and stops its timer without forcing unrelated cards to change.
- Converted card copy to A / B / C arrays. Shortcuts A contains Cmd + S = Crop & Save and Cmd + Shift + S = Print Screen; Shortcuts C contains the three Cmd + 1 / 2 / 3 project-reading, commit-message, and worklog commands. Keyboard-command portions are bold and each command is forced onto its own line.
- Renamed Tooling to Automation and added Automation A: GitHub Actions automatically updates and deploys GitHub repository changes to the Portfolio website. Remaining B / C and Terminal, System, and Tuning copy positions intentionally remain empty for later work.

Committed Source Sequence

- 8cddaa0 - Expanded and automated the UI / UX philosophy carousel. Added the product-flow titles and initial UX headline set; replaced separate controls with merged selectors; added active-stack-only three-second autoplay; synchronized headline, device, project-label, and background-glyph fades; restored Alla Vostra imagery; and refreshed the snapshot inventory.
- b8a22ff - Refined workflow carousel navigation and section framing. Unified all 15 selectors and three-second fades; created the alternating header placement and exact one-third pair widths; matched five-tone gradients; removed frame seams; restored content boundaries; and added position-aware active borders.
- 24cd149 - Expanded technical stack coverage and documented Alla Vostra's dual-store release. Added the three capability inventories and marks, removed Work Tools duplicates, updated the case study and App Store evidence, equalized active workflow backgrounds, added remote Apple image support, and installed simple-icons.
- f64f4b9 - Refined landing navigation and Productivity Hacks interactions. Added the full-page sticky navigation, final section titles, hover-focused cards, card-specific autoplay, A / B / C content arrays, keyboard shortcuts, GitHub Actions automation copy, and responsive card refinements.
- At documentation time, HEAD, main, origin/main, and origin/HEAD all resolve to f64f4b921f393ac4ff2d227b43bb4f665c4278ed. The four source commits are synchronized; no additional source commit or push was performed while generating this PDF.

Validation Summary

- Verified the Eastern date externally at UTC-05:00 and reconciled it with America/New_York after the November 1 daylight-saving transition.
- Ran the repository's project reader and reviewed the regenerated snapshot, source tree, asset inventory, deployment notes, worklog inventory, and standing commit / deployment instructions.
- Extracted all 59 earlier Portfolio PDFs, totaling 327 pages and approximately 170,702 words, and compared their structure, cadence, style, and artifact conventions.
- npm run check completed successfully; TypeScript reported no errors.
- npm run build completed successfully with Next.js 16.2.10 and Turbopack. The optimized production build compiled, TypeScript passed, seven static pages generated, and /, /aboutdev, /articles, /projects/alla-vostra, and /projects/cinerific were reported as static routes.
- Repeated browser checks confirmed local HTTP 200 health, sticky navigation coordinates, Productivity Hacks title / icon center alignment, responsive indicator dimensions, image / indicator ordering, card opacity, two-pixel lift, and hovered-card-only indicator advancement.
- The four GitHub Actions Hostinger runs all failed before executing any steps. The latest run, 41569217684, states that the job was not started because the GitHub account is locked due to a billing issue. Therefore synchronized origin/main does not establish a successful Hostinger deployment.
- git diff --check passes for committed application source. The reader-generated portfolio_PROJECT_SNAPSHOT.txt contains pre-existing trailing whitespace inherited from numbered embedded source dumps and was not reformatted manually.

Files Touched and Artifacts

- app/UiUxDecisionShowcase.tsx - UX flow titles and A headlines; merged selector integration; synchronized active-detail timing; low-visibility A / B / C background glyphs; and UI / UX carousel presentation behavior.
- app/WorkflowImageSelector.tsx - merged workflow selectors, three-second cycle, synchronized fade timing, and focused-point-only autoplay.
- app/WorkflowViewportFocus.tsx - retained exclusive stage / point focus behavior supporting the revised active-third presentation.
- app/page.tsx - UI / UX copy and media state; expanded StackTerm renderer and technology inventories; Work Tools cleanup; sticky-navigation placement; final section titles; and retained workflow data.
- app/ProductivityHacks.tsx - client-side hovered-card state, card-local intervals, A / B / C copy arrays, initial shortcuts and automation content, command-line formatting, and merged indicators.
- app/PortfolioSections.tsx - live dual-store Alla Vostra summary and tags.
- app/projects/alla-vostra/page.tsx - official App Store listing, release facts, native screenshots, dual-store release language, readiness details, and stack evidence.
- app/globals.css - carousel / workflow timing and geometry; stack gradients and capability lists; sticky navigation; Productivity Hacks focus, typography, grid, and indicator layout; responsive rules; and App Store gallery sizing.
- next.config.ts, package.json, and package-lock.json - Apple image-host allowance and simple-icons dependency.
- /Users/prahlin/gh/alla_vostra/DEPLOYMENT_LOG.md - local ancillary release-history update for the October 26 App Store publication and remaining Stripe-environment caution.
- portfolio_PROJECT_SNAPSHOT.txt - reader-generated Portfolio snapshot refreshed before PDF composition.

Follow-Up Notes

- Resolve the GitHub account billing lock, then rerun or retrigger the Hostinger static-export workflow and verify public synchronization. Do not infer deployment from synchronized Git refs alone.
- Preserve active-stack-only UI / UX autoplay and active-point-only workflow autoplay. The accepted cycle is three seconds, with long fades and a shorter full-opacity dwell.
- Keep workflow background color equally visible across all three thirds of the active stage; focus should change only point content visibility and position-aware borders.
- Complete the deferred UX B / C copy and remaining Productivity Hacks A / B / C content without introducing placeholder paragraphs.
- Reverify Alla Vostra's live iOS payment environment against the intended production Stripe account and Vercel backend before recording production payment validation.
- Retain official mark licensing / provenance, Apple remote-image configuration, and the five-tone purple / yellow / blue / orange / green mapping when adding stack terms or hack cards.

Output Artifact

- Generated /Users/prahlin/gh/portfolio/portfolio_worklog_november2.pdf using the established lowercase-month, unpadded-day naming convention. No Part suffix was needed because no earlier November 2 root-level Portfolio worklog existed.
- The title and filename use Monday, November 2, 2026 after explicit EST / UTC-05:00 verification.
- The artifact uses US Letter portrait pages, black Helvetica-family text on white, compact technical bullets, repeated dated footers, page numbers, and Codex document metadata.
- The synchronized Portfolio source baseline is f64f4b921f393ac4ff2d227b43bb4f665c4278ed. The only pre-PDF Portfolio modification is the reader-generated snapshot; the ancillary Alla Vostra deployment-log update remains local and uncommitted.
- No application source change, successful Hostinger build, public deployment, store submission, payment test, external message, or additional commit was performed during worklog generation.
