

Prahlín Portfolio Work Log - July 14, 2026

Compiled summary for Tuesday, July 14, 2026 - focus: extending the Portfolio landing page from a two-project mobile showcase into a stronger three-project proof surface, adding a Cinerific tablet device preview, improving hero proof-card placement, adding a Cinerific case-study entry, updating portfolio proof metrics, changing the visible brand identity to Martin Prahl, and replacing the static hero call-to-action with a rotating project carousel button.

Generated in continuity with the established Alla Vostra daily worklog cadence and the first Portfolio worklog artifact: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers only the Prahlín/portfolio work represented by commits 1b1e1b2 and cf141aa, plus this worklog-generation step. It uses Alla Vostra and Cinerific worklogs as style and structure references, but the body content records only Portfolio project work.

Source Materials Reviewed

- Extracted text from all 45 available local worklog PDFs across /Users/prahlin/gh/alla_vostra, /Users/prahlin/gh/cinerific, and /Users/prahlin/gh/portfolio using pdftotext.
- Reviewed 43 Alla Vostra root-level worklog PDFs spanning May through July, including the mature July 11 worklog, to preserve the established daily-report cadence, section order, validation language, files-touched list, follow-up context, and output-artifact close.
- Reviewed cinerific_worklog_july 12.pdf, especially its first-project adaptation of the Alla Vostra convention, its source-material section, native Android/Compose focus, and its explicit output-artifact naming note.
- Reviewed portfolio_worklog_july11.pdf as the closest same-project reference for title format, five-page length, root-level naming, Portfolio-specific baseline, Hostinger/static-export validation language, and follow-up conventions.
- Checked PDF metadata and page counts with pdftinfo. Current mature worklogs generally use letter-size pages and compact four-to-five page bodies for daily project summaries.
- Reviewed the Portfolio Git history and confirmed the July 14 source scope: 1b1e1b2 for the Cinerific tablet/case-study pass and cf141aa for the brand, stats, and carousel-button pass.
- Reviewed the Cinerific repository history to ground the Portfolio Cinerific case-study text in actual project work: Kotlin/Jetpack Compose scaffold, Gradle setup, Figma intro/sign-in assets, drawable resources, and intro animation work.
- Reviewed the active Portfolio source files app/page.tsx, app/globals.css, app/ProjectCarouselButton.tsx, and the tracked Cinerific intro image asset at public/images/cinerific-intro.png.

Baseline Status Before July 14 Work

- The July 11 Portfolio site already had a green/black React Native-first landing page, a Martin Prahl profile photo, Alla Vostra and CreditKing hero device mockups, case-study cards, a stack section, worklog section, contact panel, Hostinger static-export workflow, and the first Portfolio PDF worklog.
- The hero still framed the project proof mostly around Alla Vostra and CreditKing. Cinerific existed as a separate native Android project but did not yet appear as a visible Portfolio case-study surface.

- The static hero CTA still functioned as a single View Alla Vostra link rather than a rotating project entry point.
- The proof card was originally part of the hero visual cluster, which made it prone to visual collisions once additional device artwork was added.
- The stats strip still used project-specific counters such as Alla Vostra commits, PDF worklogs, and CreditKing commits rather than broader portfolio-level proof points.
- The top-left brand still displayed Prahlin, which is the GitHub username, even though the user requested the visible developer identity to read Martin Prahlin while preserving the underlying Prahlin project identity elsewhere.

Goals for July 14

- Add Cinerific to the first-viewport device composition without replacing the existing Alla Vostra and CreditKing mobile-app proof.
- Use the real Cinerific intro screenshot from the local Cinerific project rather than a generic placeholder or newly invented image.
- Add a Cinerific case-study card below the hero, ordered left-to-right before Alla Vostra and Credit King, with Kotlin, Compose, Gradle, and TypeScript as the key rounded tags.
- Reposition the Play Store prep / Stripe + Postmark proof panel so it aligns with the left hero action rhythm and does not overlap text, device imagery, buttons, or screenshots across aspect ratios.
- Replace narrow project counters with broader portfolio proof: years of UI/UX, front-end and back-end experience, GitHub commits, project worklogs, and Android release prep.
- Keep the four proof-stat columns in a single row rather than allowing responsive media rules to collapse the strip into multiple rows.
- Replace the visible top-left Prahlin brand text with Martin Prahlin while keeping the monogram and existing GitHub/Portfolio identity intact.
- Turn the static View Alla Vostra CTA into a rotating project carousel that cycles through the three project destinations every five seconds with a bumpy swoosh animation.

Work Completed - Cinerific Tablet Device Frame

- Copied the local Cinerific intro image from /Users/prahlin/gh/cinerific/screenshots into the Portfolio public image set as public/images/cinerific-intro.png.
- Added a new TabletPreview component to app/page.tsx so the hero can render a landscape Android-tablet-style frame alongside the two existing smartphone frames.
- Styled the new tablet frame in app/globals.css with a green/black shell, inner camera dot, rounded screen, subtle grid treatment, and a horizontal tilt compatible with the existing hero device composition.
- Sized the tablet as a landscape 16:10 preview and applied a 1.5x transform after testing a too-large 2x pass. The tablet now feels substantial without overtaking the entire hero.
- Placed the tablet low enough to obscure the lower portions of the Alla Vostra and CreditKing phone mockups while keeping the phone identities visible.
- Inserted the Cinerific intro screenshot into the tablet screen using a centered cover crop so the outer edges trim evenly and the central Cinerific logo remains visible.
- Adjusted responsive tablet dimensions and placement for narrower breakpoints so the tablet remains part of the device stack instead of colliding with hero copy.

Work Completed - Proof Card and Hero Layout Refinement

- Moved the proof panel out of the hero visual overlay after the Cinerific tablet made the previous placement feel crowded and visually unpleasing.
- Repositioned the proof panel into the left hero column beneath the stack chips, aligned with the left edge of the View button and the React Native chip.
- Matched the proof-panel vertical rhythm to the spacing between the action buttons and stack-chip row, creating a cleaner column of related proof elements.
- Kept the proof panel content unchanged for this pass: Play Store prep and Stripe + Postmark backend remain visible as compact implementation proof.
- Changed the hero visual area from an absolutely managed proof-panel collision zone to a cleaner split where project imagery sits on the right and proof/card rhythm sits with the copy on the left.
- Verified the result visually at desktop and mobile widths before continuing with the lower-page case-study work.

Work Completed - Cinerific Case Study Entry

- Added Cinerific as the first case-study entry in the caseStudies data array so the lower section reads left-to-right as Cinerific, Alla Vostra, and Credit King on desktop.
- Grounded the Cinerific description in the local Cinerific Git history and README: Kotlin and Jetpack Compose Android app scaffold, Figma intro/sign-in frame translation, drawable assets, tablet-friendly full-screen screens, and animated intro flow.
- Added requested key component tags for Cinerific: Kotlin, Compose, Gradle, and TypeScript.
- Added cinerific-intro.png as the first preliminary screenshot in the Cinerific case-study card.
- Introduced landscape screenshot handling so Cinerific keeps a tablet/landscape aspect instead of being squeezed into the existing 9:16 phone-miniature styling.
- Changed the case-study grid to three desktop columns and retained responsive fallback behavior for medium and mobile breakpoints.
- Renamed the displayed CreditKing case-study title to Credit King while leaving the hero phone mockup label unchanged for the existing finance-device visual.

Work Completed - Portfolio Proof Stats and Identity

- Replaced the old 328 Alla Vostra commits stat with 500+ GitHub commits so the proof strip now summarizes broader developer output rather than one project only.
- Replaced the old 42 PDF worklogs stat with 50+ Project worklogs, matching the fuller documentation corpus across Alla Vostra, Cinerific, and Portfolio.
- Removed the 94 Credit King commits stat from the proof strip at the user request.
- Added a new first stat column reading 3+ Years with the label of UI/UX, Front-end & Back-end experience.
- Kept Android release prep as the fourth stat column, preserving the mobile-release thread established in the first Portfolio worklog.
- Updated the stats-strip grid so all four columns stay in a single row and removed responsive overrides that were collapsing the strip at narrower widths.
- Changed the top-left visible brand text from Prahlin to Martin Prahlin and updated its accessible label to Martin Prahlin home.

Work Completed - Project Carousel CTA

- Added app/ProjectCarouselButton.tsx as a focused client component so the rest of the page can remain primarily static while the hero CTA rotates project targets in the browser.

- Replaced the static View Alla Vostra hero button with ProjectCarouselButton while preserving the same button styling and arrow-icon treatment.
- Started the carousel on View Alla Vostra, then cycles every five seconds through View Credit King, View Cinerific, and back to View Alla Vostra.
- Updated the button href together with the visible label so each carousel state links to the matching case-study section anchor.
- Added stable case-study IDs for cinerific, alla-vostra, and credit-king so the carousel has reliable section targets.
- Added a bumpy project-swoosh keyframe animation: the label slides in from the right, overshoots, compresses slightly, and settles without resizing the surrounding hero layout.
- Added a prefers-reduced-motion fallback so users who reduce motion do not receive the animated swoosh effect.

Validation and Checks Performed

- Ran npm run check after the July 14 source changes. TypeScript completed successfully.
- Ran npm run build:static after the July 14 source changes. Next.js static export completed successfully for Hostinger-compatible output.
- Confirmed the local dev preview at <http://127.0.0.1:3000> served the updated Martin Prahll brand, the 3+ Years / 500+ / 50+ / EAS proof-stat row, and the Cinerific case-study content.
- Restarted the Next dev server and cleared the generated .next cache when local preview CSS stayed stale after build checks, then verified the served CSS reflected the current four-column stats rule.
- Used headless Chrome to verify the carousel behavior in a real browser environment. After a virtual-time budget longer than five seconds, the DOM advanced from the initial View Alla Vostra state to View Credit King.
- Checked the served CSS for project-swoosh, carousel-button classes, and the repeat(4, minmax(0, 1fr)) stats-strip rule.
- Used git show --stat for commits 1b1e1b2 and cf141aa to confirm the tracked July 14 code scope before generating this PDF.
- Confirmed the branch is main tracking origin/main before worklog generation. This PDF generation step creates a new local artifact and does not commit it automatically.

Files Touched During July 14 Portfolio Work

- app/ProjectCarouselButton.tsx - new client-side rotating hero CTA component with five-second interval, project anchors, bumpy label animation support, and arrow icon.
- app/page.tsx - added TabletPreview, Cinerific case-study data, stable case-study IDs, ProjectCarouselButton usage, proof-stat copy, Martin Prahll brand text, landscape image handling, and reordered case studies.
- app/globals.css - added tablet frame styling, Cinerific image inlay styling, proof-panel relocation, three-column case-study grid, landscape miniature styling, four-column proof-stat hardening, carousel button styles, keyframes, and reduced-motion fallback.
- public/images/cinerific-intro.png - imported Cinerific intro screenshot used in both the hero tablet frame and the Cinerific case-study miniature.
- portfolio_worklog_july14.pdf - new July 14 Portfolio worklog artifact generated at the repository root.

Follow-Up Context

- Consider creating dedicated project pages for Cinerific, Alla Vostra, and Credit King so the carousel button can eventually link to full case-study narratives rather than section anchors only.
- Add additional Cinerific screenshots as the Android app develops beyond the first intro/sign-in flow, especially once more Compose screens or playback/library surfaces exist.
- Update the page metadata later if the public search/social title should move from Prahlin to Martin Prahlin while still preserving the Prahlin GitHub username and repository identity.
- Replace the hardcoded 500+ GitHub commits and 50+ Project worklogs with build-time generated stats only if the automation becomes worth the complexity.
- Review the hero at real mobile widths after future device-image additions, because the current composition deliberately balances three project surfaces in one first viewport.
- Continue asking for Portfolio commit messages before committing or pushing new Portfolio changes unless the user explicitly instructs otherwise.

Output Artifact

- Filename: portfolio_worklog_july14.pdf.
- Created at the Portfolio repository root in /Users/prahlin/gh/portfolio.
- Follows the Portfolio naming convention established by portfolio_worklog_july11.pdf and the root-level daily worklog convention inherited from Alla Vostra.
- Uses the Alla Vostra and Cinerific PDF worklogs as structure/style references while documenting only July 14 Portfolio work.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this worklog artifact.
- Created this daily worklog PDF: portfolio_worklog_july14.pdf.
