

Prahlín Portfolio Work Log - August 5, 2026

Compiled summary for Wednesday, August 5, 2026 - focus: continuing the Prahl.dev Portfolio Alla Vostra case-study page after the August 4 real-control-asset pass, rebuilding the hero proof cards from plus-sign shorthand into icon-backed Full-Stack and Platforms cards, importing and trimming platform marks, matching card sizing and row alignment across narrow portrait windows, tuning the hero device composition and proof-stat strip, cleaning the UX Product Flow diagram connectors and underlay, hardening local cache/deploy repository hygiene, validating TypeScript and static export, refreshing the Portfolio project snapshot, reviewing all prior Portfolio PDF worklogs, and generating the August 5 Portfolio PDF worklog.

Generated in continuity with the established Prahlín Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahlín/portfolio work performed after portfolio_worklog_august4.pdf and after the corrected August 4 documentation state. The source commits reviewed for this record are f4ef9d43ec25a489cd6f89148ae1833a4a953b3e, 8caad05cc008b41c532e685b18f2ed9c4aeac890, and 8e21e8d55922f66fecfe7ffe52952f51b3864814. The last two source commits were made just after midnight on Thursday, August 6, 2026 during the same late August 5 work cycle; the user explicitly requested August 5 as the worklog date for this artifact. Public Hostinger deployment was not pushed during this record.

Source Materials Reviewed

- Ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed portfolio_PROJECT_SNAPSHOT.txt, including project notes, current source tree, line-numbered source dumps, public image and font inventories, PDF inventory, package and deployment configuration, git context, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF: portfolio_worklog_july11.pdf, portfolio_worklog_july14.pdf, portfolio_worklog_july15_part1.pdf, portfolio_worklog_july15_part2.pdf, portfolio_worklog_july16.pdf, portfolio_worklog_july19.pdf, portfolio_worklog_july20.pdf, portfolio_worklog_july21.pdf, portfolio_worklog_july22.pdf, portfolio_worklog_july23.pdf, portfolio_worklog_july24.pdf, portfolio_worklog_july25.pdf, portfolio_worklog_july29.pdf, portfolio_worklog_july30.pdf, portfolio_worklog_july31.pdf, portfolio_worklog_august1_part1.pdf, portfolio_worklog_august1_part2.pdf, portfolio_worklog_august1_part3.pdf, portfolio_worklog_august3.pdf, and portfolio_worklog_august4.pdf.
- Extracted text from all twenty existing Portfolio PDFs with pdftotext and checked metadata/page counts with pdftinfo to preserve title cadence, opening-summary density, section order, compact bullet-heavy technical voice, validation language, files-touched lists, follow-up context, output-artifact close, root-level filename style, letter-size pages, PDF 1.4 output, Codex author/creator/producer metadata, and Helvetica-style base-font convention.
- Used portfolio_worklog_august4.pdf as the closest structural baseline because it documented the immediately preceding Alla Vostra UI Foundations refinements, local-preview behavior, snapshot refresh, full prior-worklog review, validation summary, files-touched list, and local-only output-artifact language.
- Reviewed git history and source state through git log, git show --stat, git show --name-

status, git diff --stat, git diff --name-status, and current branch status. main and origin/main both resolved to 8e21e8d before this PDF was generated.

- Reviewed app/projects/alla-vostra/page.tsx, app/projects/alla-vostra/ProductFlowSwitcher.tsx, app/projects/alla-vostra/HeroProofBottomAligner.tsx, app/globals.css, app/PortfolioSections.tsx, .gitignore, next-env.d.ts, package.json, next.config.ts, read_project.sh, and the newly added public/images/alla-vostra and platform SVG assets.
- Reviewed the nested out deployment directory state after VS Code reported a push-ref error, then compared the local hostinger-deploy state against origin/hostinger-deploy before repairing the local generated-output state without pushing a public deploy branch.

Baseline Status Before August 5 Work

- The August 4 Portfolio work had already filled UI Foundations with real Alla Vostra app navigation and control captures, replaced CSS-drawn controls with PNG crops, added Playwright, and established local-only validation around the Alla Vostra page.
- The Alla Vostra hero proof cards still used plus-sign shorthand and an X-Platform title, which read less like a polished product proof badge than the surrounding store, GitHub, and contact-button language.
- The user wanted the Full-Stack card to inherit the green checkmark-box language from the Alla Vostra app rather than displaying plain plus signs beside UI/UX, F-End, B-End, and Release.
- The X-Platform card needed to become Platforms, remove bullet and plus-sign notation, and show a two-row matrix where Android, iOS, and Web labels sit above corresponding symbols.
- The platform symbols required several brand-specific passes: App Store blue, a clipped white App Store A mark, an Apple symbol without its imported white box, an Android robot-head mark, and the existing Alla Vostra landing CTA web globe converted into the hero-card context.
- Narrow portrait windows still produced mismatched proof-card geometry, with one card acting taller/wider than the other and the Full-Stack skill rows failing to align cleanly against the Platforms label/icon rows.
- The hero device composition still needed screenshot swapping, a more intentional left-device vertical relationship, and better coupling between proof-card bottom edges and the Contact Dev button in wide aspect ratios.
- The UX Product Flow diagram still contained a Home-to-Cart connector path and a leftover horizontal noodle body that no longer matched the requested flow presentation.
- Generated caches and OS metadata had begun to interfere with local source-control surfaces, making .next cleanup folders and lowercase .DS_store files worth ignoring explicitly.

Goals for August 5

- Replace Full-Stack plus signs with app-inspired green checkmark boxes whose visible size tracks the skill-label font size and whose fill/stroke treatment matches the final hero-card language.
- Rename X-Platform to Platforms and rebuild that proof card as a clean Android/iOS/Web matrix without plus signs, bullet points, or placeholder text treatments.
- Use official or official-like platform source art where possible, then trim away imported background boxes so the existing card/button fills become the only visible backing shapes.
- Tune Android, Apple, App Store, Play Store, and Web symbol sizing, aspect ratio, fill color, stroke color, and optical alignment through user-directed comparison passes.
- Protect proof-card sizing and vertical row alignment in portrait and narrow windows by letting the largest card define the shared card footprint and row grid.

- Rework Alla Vostra hero device positions and screenshot assignment so the left, middle, and right phone frames feel deliberate while preserving the existing hero system.
- Update Alla Vostra hero proof stats to full values, reduce awkward lower black gaps, and protect large bottom visual spacing across portrait breakpoints.
- Clean the UX Product Flow diagram by removing obsolete noodles, matching underlay and grid planes, and tightening vertical rail label kerning without changing the overall table structure.
- Keep all work local unless the user explicitly asks for commit, push, deploy, or public website updates.

Work Completed - Full-Stack and Platforms Cards

- Replaced the Full-Stack card plus-sign markers with a custom SVG checkmark-box asset at `public/images/alla-vostra/checkmark-box.svg`, borrowing the Alla Vostra app's green confirmed-box visual language for the hero proof card.
- Scaled the checkmark boxes upward through repeated passes, matched their visible height to the UI/UX, F-End, B-End, and Release text scale, restored the dark green box fill, and applied black hairline detailing to the check mark and box outline where requested.
- Renamed the X-Platform hero card to Platforms and removed all plus signs and bullet-style cues, turning the card into a compact proof matrix rather than a text list.
- Moved the Apple symbol out of the left hero source-button area and into the Platforms card, then removed the imported white square backing, doubled and later reduced the symbol scale, inverted it to the final off-white tone, and compressed it until the visible mark read as a square-ish platform symbol.
- Updated the App Store button fill to the App Store blue hex value `#0D96F6`, inserted a clipped App Store A-style mark, removed its extra square background, and applied the Play Store logo's black hairline stroke treatment to the A mark.
- Added `public/images/app-store-mark.svg` for the standalone App Store mark, then used it only as foreground geometry so the existing blue button fill remained the single visible background.
- Added `public/images/android-robot-head.svg`, iterated through official and simpler Android mark candidates, compressed the robot head horizontally until its face read more squarely, and tested the final dark green fill from the checkmark-box system.
- Pulled the exact Web globe geometry already used in the Alla Vostra landing CTA button, placed it as the Web platform symbol, removed orange fill, scaled it up, thinned the strokes, and changed the final stroke color to a stylish gray so it would not merge visually with the Apple mark.
- Kept the final Platforms matrix as a two-row presentation: top row labels And, iOS, and Web; second row Android robot head, Apple symbol, and Web globe.

Work Completed - Hero Layout, Alignment, and Proof Stats

- Added shared CSS variables and grid rules so the Full-Stack and Platforms cards use the same column-gap, content-top, top-row, bottom-row, and card-height references in narrow windows.
- Made the widest/tallest hero proof card act as the sizing reference in portrait-style layouts by switching the proof-card row to equal grid columns, stretched card heights, and shared row tracks.
- Aligned the UI/UX and platform-label rows to the same vertical centerline, then aligned the B-End/Release row with the platform-icon row so the two hero cards read as one coordinated proof system.
- Added `app/projects/alla-vostra/HeroProofBottomAligner.tsx` as a small client-side synchronizer that observes the wide hero layout and sets `--av-proof-row-bottom` so the proof cards' bottom edge tracks the Contact Dev button bottom without resizing the cards.
- Swapped the left and right Alla Vostra hero screenshot assets so the products screen

moved into the right-side device and the confirmation screen moved into the left-side frame.

- Moved the leftmost hero device upward so its lower edge visually landed between the middle and right device-frame bottom edges, improving the staggered three-phone composition.
- Changed the Alla Vostra hero proof stat values from 0.4k and 0.1k to 400 and 200, preserving the labels Quality GitHub Commits and Real-Time Project Worklogs.
- Expanded the proof-stats strip downward, reduced awkward black lower gaps, and protected the large bottom vertical spacing in portrait modes through a consistent stats-strip item height.

Work Completed - UX Product Flow and Button Responsiveness

- Kept the UI Foundations and UX Product Flow switcher as a two-column row in narrow/portrait views, scaling the button font down through responsive variables instead of allowing UI/UX text to break into a two-line stack.
- Rolled back the experimental text-stroke changes on the UI Foundations and UX Product Flow button fonts after user review, returning those controls to their original font treatment.
- Removed the obsolete Home-to-Cart connector path from the UX Product Flow diagram so the Browse and Shop flow no longer implied a direct bypass into Cart.
- Removed the leftover horizontal noodle body that remained after the first connector pass, cleaning the diagram line work around the Home/Browse rail junction.
- Matched the flow diagram panel rectangle to the full coordinate frame so the dark underlay no longer protruded beneath or around the lighter grid-pattern overlay.
- Added rail-specific class names and tightened vertical green section-box letter spacing, with a special Confirmation rail adjustment so its long label fits the same vertical visual system.

Work Completed - Repository Hygiene and Local Output Repair

- Added `.next.cleared-*/` to `.gitignore` during the local cache-clearing pass so timestamped Next cache backup directories created during development do not surface as source changes.
- Added lowercase `.DS_store` beside the existing `.DS_Store` ignore rule so both macOS metadata spellings are explicitly ignored by the source repository.
- Investigated the VS Code push-ref error and confirmed the main Portfolio source repo was clean and aligned with origin/main while the nested generated out directory had become a separate local repo on hostinger-deploy.
- Fetched origin metadata for the nested out repo, identified an accidental local `.DS_Store` binary commit with no merge base against origin/hostinger-deploy, and reset that generated deploy repo back to origin/hostinger-deploy after user approval.
- Rebuilt the static export locally with `npm run build:static`, removed generated out/`.DS_Store` metadata, and restored `next-env.d.ts` to the dev route-types path so source-control state stayed clean and intentional.
- Left public deployment untouched: no hostinger-deploy push, GitHub Actions dispatch, production publish, or live-site update was performed during this record.

Validation Summary

- `npm run check` passed with `tsc --noEmit` after the August 5 source commits and again before this PDF generation pass.
- `npm run build:static` passed with Next.js 16.2.10 and generated static routes for `/`, `/_not-found`, `/articles`, `/projects/alla-vostra`, and `/projects/cinerific`.
- `git diff --check` initially caught trailing whitespace introduced by the regenerated snapshot; the snapshot was normalized, and `git diff --check` then passed.
- `pdfinfo` and `pdftotext` were available locally and were used to inspect prior worklog

metadata, page counts, title cadence, and extracted text structure before generating this artifact.

- git status before PDF generation showed main aligned with origin/main and only the refreshed portfolio_PROJECT_SNAPSHOT.txt modified.
- The static export validation created generated output only. Any incidental .DS_Store file in out/ was removed and no generated out repository was pushed.
- This PDF was generated with the same small standard-library PDF writer pattern, letter page size, Helvetica-style font usage, Codex metadata, and root-level Portfolio filename convention as the mature prior worklogs.

Files Touched During August 5 Portfolio Work

- app/projects/alla-vostra/page.tsx - updated Alla Vostra proof stats, imported the hero proof bottom aligner, rewired Full-Stack and Platforms proof-card data, inserted the platform/checkmark asset usage, and swapped the hero products/confirmation screenshots.
- app/projects/alla-vostra/HeroProofBottomAligner.tsx - added the wide-layout observer that keeps the hero proof-card row bottom aligned with the Contact Dev button bottom edge.
- app/projects/alla-vostra/ProductFlowSwitcher.tsx - removed the Home-to-Cart connector and leftover horizontal noodle, matched the panel rectangle to the flow coordinate frame, and added rail-specific class names for label kerning control.
- app/globals.css - tuned App Store mark hairlines, Alla Vostra hero padding, device placement, proof-card row positioning, equal-card responsive behavior, shared row tracks, stats-strip height, product-flow nav sizing, flow-rail kerning, and narrow-window safeguards.
- public/images/alla-vostra/checkmark-box.svg - added the dark green checkmark box used by the Full-Stack hero card.
- public/images/android-robot-head.svg - added the simplified Android robot-head platform symbol used by the Platforms card.
- public/images/app-store-mark.svg - added the clipped App Store A-style symbol used inside the App Store source button.
- .gitignore - added .next.cleared-*/ for local cache backups and .DS_store for lowercase macOS metadata files.
- portfolio_PROJECT_SNAPSHOT.txt - regenerated with ./read_project.sh for current project context and normalized after generation so diff whitespace checks pass.
- portfolio_worklog_august5.pdf - generated as this August 5 Portfolio worklog artifact in the root-level Portfolio worklog convention.

Follow-Up Context

- The Alla Vostra hero proof cards now depend on shared row tracks and a wide-layout bottom aligner. Future hero-card edits should preserve the Full-Stack and Platforms row-pair relationship before changing individual icon sizes.
- The Platforms card intentionally uses And as the Android label, iOS as the Apple label, and Web as the globe label, matching the user-approved shortened copy inside the constrained card.
- The App Store A mark is foreground-only against the blue button fill, while the Apple platform symbol is foreground-only inside the Platforms card. Avoid reintroducing imported square backings unless the user asks for a boxed logo treatment.
- The Android robot head uses the dark green visual family from the checkmark boxes rather than a default bright Android green, because that was the accepted final direction for this card.
- The UX Product Flow diagram no longer contains the direct Home-to-Cart noodle. Future connector changes should be checked against the current Browse -> Shop -> Cart -> Checkout -> Payment -> Confirmation structure.
- The nested out directory should be treated as generated output unless the user

explicitly requests a manual Hostinger branch update. Normal source work should stay in main and avoid committing OS metadata or generated cache folders.

- No public deployment was performed during this record. The current source state is committed and aligned with origin/main, while the refreshed snapshot and this August 5 PDF are local documentation artifacts until the user requests or approves a documentation commit.

Output Artifact

- Generated file: portfolio_worklog_august5.pdf.
- Location: /Users/prahlin/gh/portfolio/portfolio_worklog_august5.pdf.
- Naming follows the existing root-level Portfolio convention for a single daily PDF: portfolio_worklog_august5.pdf.
- Uses the same daily worklog structure and compact technical voice established by portfolio_worklog_july11.pdf through portfolio_worklog_august4.pdf.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this artifact.
- The local project date used for this filename and title is Wednesday, August 5, 2026, per the user's explicit request during the Thursday, August 6, 2026 runtime context.
