

Prahl Portfolio Work Log - August 3, 2026

Compiled summary for Monday, August 3, 2026 - focus: continuing the Prahl.dev Portfolio Alla Vostra case-study page after the August 1 device-frame and product-flow passes, adding a dedicated UI Foundations / UX Product Flow switcher, rebuilding the Product Flow visual as a responsive DOM-based diagram, creating UI Foundations categories for color, typography, iconography, photography, hero, and sticky icon samples, importing Alla Vostra app fonts and image assets, validating the local and static-export builds, manually updating the Hostinger deploy branch after GitHub Actions was blocked by an account billing issue, confirming prahl.dev served the updated site, refreshing the Portfolio project snapshot, reviewing all prior Portfolio PDF worklogs, and generating the August 3 Portfolio PDF worklog. Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after `portfolio_worklog_august1_part3.pdf` and after the August 1 Part 3 source/documentation state. The committed source state reviewed for this record is `be8047df4b8b05587db53b6976e721ce6bdc84c1` on main, matching origin/main before this PDF was generated. The public Hostinger deploy branch was manually updated to `5ecd726a927949de27b4c3f5f066180c4884c839` because the normal GitHub Actions runner could not start. Alla Vostra application assets were read and copied only as Portfolio documentation/display sources; Alla Vostra, Cinerific, Credit King, Figma, App Store, and Google Play external application repositories were not modified for this record.

Source Materials Reviewed

- Ran `./read_project.sh` from `/Users/prahlin/gh/portfolio` and regenerated `portfolio_PROJECT_SNAPSHOT.txt` before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed `portfolio_PROJECT_SNAPSHOT.txt`, including project notes, current source tree, line-numbered source dumps, public image and font inventories, PDF inventory, deployment notes, git context, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF: `portfolio_worklog_july11.pdf`, `portfolio_worklog_july14.pdf`, `portfolio_worklog_july15_part1.pdf`, `portfolio_worklog_july15_part2.pdf`, `portfolio_worklog_july16.pdf`, `portfolio_worklog_july19.pdf`, `portfolio_worklog_july20.pdf`, `portfolio_worklog_july21.pdf`, `portfolio_worklog_july22.pdf`, `portfolio_worklog_july23.pdf`, `portfolio_worklog_july24.pdf`, `portfolio_worklog_july25.pdf`, `portfolio_worklog_july29.pdf`, `portfolio_worklog_july30.pdf`, `portfolio_worklog_july31.pdf`, `portfolio_worklog_august1_part1.pdf`, `portfolio_worklog_august1_part2.pdf`, and `portfolio_worklog_august1_part3.pdf`.
- Extracted text from all eighteen existing Portfolio PDFs with `pdftotext` and checked metadata/page counts with `pdftinfo` to preserve title cadence, opening-summary density, section order, compact bullet-heavy technical voice, validation language, files-touched lists, follow-up context, output-artifact close, root-level filename style, letter-size pages, PDF 1.4 output, Codex author/creator/producer metadata, and Helvetica-style base-font convention.
- Used `portfolio_worklog_august1_part3.pdf` as the closest mature structural baseline because it documented the immediately preceding Portfolio visual-system cleanup and explicitly recorded snapshot refresh, full worklog review, local validation, and local-only artifact conventions.
- Kept `portfolio_worklog_august1_part1.pdf` in view as the closest Alla Vostra Product Flow reference, because it documented the earlier SVG-based flow diagram, source-button work, static-export validation language, Hostinger workflow review, and Product Flow page context.

- Reviewed app/projects/alla-vostra/page.tsx, app/projects/alla-vostra/ProductFlowSwitcher.tsx, app/globals.css, public/fonts/alla-vostra/*, public/images/alla-vostra/*, package.json, .github/workflows/hostinger-static-export.yml, README.md, git history, the current origin/main state, and the manual hostinger-deploy branch state.
- Reviewed selected Alla Vostra application source files from /Users/prahlin/gh/alla_vostra/mob as asset/style references only, including data/shopOverlayProducts.js, components/AppHeader.js, components/StickyCartButton.js, components/StickyQuestionButton.js, components/ShoppingCartIcon.js, styles/stickyCartStyles.js, styles/stickyQuestionStyles.js, styles/headerStyles.js, and utils/stickyButtonLayout.js.

Baseline Status Before August 3 Work

- The August 1 work had already moved the Portfolio toward photographic device frames, refined the landing hero visual stack, and established stronger case-study source controls and Product Flow expectations.
- The Alla Vostra Product Flow section still mixed a static product-flow screenshot/SVG approach with the surrounding page and did not yet provide the requested UI Foundations versus UX Product Flow split.
- The user wanted a top-of-section switcher placed above the Product Flow heading, using full-width joined buttons whose labels resized on narrow screens without scaling the button boxes themselves.
- The UX Product Flow diagram needed to stop behaving like a static image. Its width needed to stretch horizontally with the window while preserving vertical geometry, section alignment, arrow centerlines, and node positions.
- The UI Foundations side needed to display the startup screenshot separately from the UX flow diagram and then scaffold reusable design-system categories beneath it.
- The Color, Typography, Iconography, Photography, Hero, and Icon samples needed to be grounded in actual Alla Vostra app assets, colors, fonts, labels, and source-component styling rather than generic placeholders.
- The existing screenshot reveal behavior was important: wide windows should initially show two stacks, narrow portrait windows should initially show one stack, and Show More / Show Less should remain generic and consistent.
- The official public website deployment path was still the Hostinger static export branch, normally produced by GitHub Actions from main.

Goals for August 3

- Replace the old Product Flow presentation with a switchable UI Foundations / UX Product Flow component while preserving the surrounding Alla Vostra page structure.
- Keep UX Product Flow as the default active view and show only the flow diagram there, while moving the startup screenshot into the UI Foundations view.
- Rebuild the UX Product Flow diagram as a DOM-based visual with stable vertical positioning and horizontally responsive width behavior instead of relying on a static image asset.
- Add UI Foundations categories 00 through 05, preserve the category/stage reveal interaction, and limit customized categories to the correct step sets.
- Build Colors & Theming around recurring Alla Vostra app colors, grouped as Primaries, Accents, and Neutrals, with named color squares and square-ish device-frame logic.
- Build Typography & Spacing using the app's Dream Avenue and TT Fors fonts, with orange sample frames and cream text matching the Alla Vostra palette.
- Build Iconography & Imagery around real app art, product photography, the layered app header hero, and sticky button icons, while removing unfinished placeholder stacks from that category.
- Validate locally, build for static export, work around the blocked GitHub Actions deploy path,

publish the current static export to the official hostinger-deploy branch, and confirm prahl.dev served the update.

- Generate the next Portfolio PDF worklog using Eastern-time date, existing naming conventions, and the mature 5-6 page worklog structure.

Work Completed - Product Flow Switcher and Page Rewire

- Replaced the inline Product Flow section in app/projects/alla-vostra/page.tsx with a dedicated ProductFlowSwitcher client component, passing through the existing launchScreen and screenshotGroups data.
- Added the full-width joined UI Foundations / UX Product Flow button stack above the Product Flow heading, preserving the requested placement above the green eyebrow text and matching the page's layout width.
- Renamed the UI side from UI Blueprint to UI Foundations everywhere visible in the new component.
- Set the heading eyebrow and headline to update with the active view: UI Foundations for the design-system side and UX Product Flow for the flow side.
- Preserved UX Product Flow as the default active view so the page continues opening on the user's product-flow diagram unless the user chooses UI Foundations.
- Ensured the UX view shows the flow diagram without the startup screenshot, and the UI Foundations view shows the startup screenshot without the flow diagram.
- Restored the existing UX stage sections after an intermediate regression, keeping stages 1-7 available only when UX Product Flow is active.
- Added Stage 0 Tutorial to UX Product Flow with placeholder copy, Small/Large screenshot placeholders, and the same Show More / Show Less behavior used elsewhere.

Work Completed - Responsive UX Flow Diagram

- Rebuilt the Product Flow diagram as a coordinate-based DOM layout with rails, nodes, line segments, arrowheads, background plane, panel plane, and responsive CSS variables.
- Preserved the Tutorial, Browse, Shop, Cart, Checkout, Payment, and Confirmation rail structure from the prior static diagram.
- Recreated the node labels and routing structure, including Step 1 through Step 5, Home, Products, About Us, Contact, Shop, Tutorial, Selection, Cart, Contact, Address, Date & Time, Payment Method, Details Input, Confirmation Prompt, and Thank You / Order Confirmed.
- Adjusted the diagram background plane so it uses the same coordinate frame as the foreground nodes/arrows instead of scaling differently from the rest of the diagram.
- Anchored eyebrow/headline sizing in the Product Flow area so window stretching changes horizontal diagram behavior without changing heading height or moving vertical positions.
- Removed the former static-image scalability behavior for the flow diagram and startup screenshot, replacing it with a horizontally stretchable diagram whose vertical structure remains fixed.
- Kept the flow chart centered in the single-column visual layout and constrained its wide-screen width to the intended maximum without changing the vertical table height.

Work Completed - UI Foundations Category System

- Added UI Foundations category scaffolding for Colors & Theming, Typography & Spacing, Iconography & Imagery, Navigations, Controls & Inputs, and Visual Hierarchy.
- Renamed UI category labels through the requested iteration sequence, including the final category terminology and the CATEGORY label replacing STAGE on UI Foundations sections.
- Preserved the one-row-at-a-time reveal logic: wide windows show two stacks initially, narrow portrait windows show one stack initially, and additional stacks appear through Show More.
- Simplified all reveal buttons across the UI Foundations and UX Product Flow screen sections to

the generic Show More and Show Less labels.

- Limited Colors & Theming to Steps 1-3, Typography & Spacing to Steps 1-2, and Iconography & Imagery to Steps 1-4 so those customized categories no longer show irrelevant placeholder stacks.
- Kept the remaining UI Foundations categories on the default placeholder behavior so future work can fill them without disturbing the working reveal system.

Work Completed - Colors and Typography Foundations

- Identified and represented the recurring non-gradient Alla Vostra color set used across screenshots and app overlays, including cream/white, orange, brown accent, white, and black/charcoal neutral tones.
- Built Colors & Theming swatch groups as Primaries, Accents, and Neutrals, replacing generic Step labels with square color-frame presentations.
- Added official/common color names above the color squares, including Quarter Pearl Lusta, Rajah, Breen, White, Cod Gray, and Tuatara.
- Tuned portrait-mode alignment so one-line and two-line color names remain vertically balanced above their corresponding square swatches.
- Removed Step 4 and Step 5 only from Colors & Theming while preserving the Show More button when extra stacks are available.
- Copied Dream Avenue and TT Fors font files from the Alla Vostra app assets into public/fonts/alla-vostra and declared @font-face rules in app/globals.css.
- Built Typography & Spacing Step 1 as Fonts, showing Dream Avenue and TT Fors inside orange square frames with cream text, then tuned the sample sizing through the requested increases.
- Kept Typography Step 2 as a placeholder while removing Steps 3-5 from that category.

Work Completed - Iconography, Photography, Hero, and Sticky Icons

- Added Original Art under Iconography & Imagery using the app's truck, bargain, and SOFLO art assets, with the final labels Speedy Delivery, Great Deal, and Local Availability.
- Set the Original Art frames to the app-correct cream background after checking the Alla Vostra app source for the correct overlay fill behavior.
- Added Original Photography with the three checkout product images Piccola, Sei Perfetto, and Buon Natale, then anonymized the green eyebrow labels to Product #1, Product #2, and Product #3 while preserving product-name captions.
- Added Original Hero as Step 3, using the app header background image and cheeseboard_products overlay as layered assets rather than a screenshot crop.
- Changed Original Hero to include both Small and Android Large/tall device-frame versions, with transparent frame backing so the unused lower transparent area no longer appears as cream or black fill.
- Added Original Icons as Step 4 and recreated the Sticky Cart and question-mark Tutorial buttons as static samples from the actual app source styling.
- Ported the Shopping Cart SVG path directly from ShoppingCartIcon.js and matched the cart button's orange gradient, black border, rounded rectangle, white cart strokes, and shadow plate.
- Recreated the Tutorial sticky question button with white fill, black border, circular shape, and the orange gradient question mark treatment from StickyQuestionButton.js.
- Removed the abandoned Product #4 cheeseboard-only photo tile and removed Step 5 from Iconography & Imagery so the section ends on Original Icons.

Work Completed - Assets, Styling, and Deployment

- Imported Alla Vostra app image assets into public/images/alla-vostra, including truck1_square_whitefill.png, bargain_square_whitefill.png, soflo_square.png, Piccola, Sei

Perfetto, Buon Natale product PNGs, header-background-no-cheeseboard.png, and cheeseboard-products-overlay.png.

- Added substantial global CSS for the product-flow nav, single-view layout, DOM flow diagram, UI swatches, font samples, original art/photo grids, hero composition, sticky icon samples, and responsive narrow-window behavior.
- Ran npm run check and npm run build during the implementation cycle and kept the local Alla Vostra route returning HTTP 200.
- Confirmed main and origin/main both pointed to be8047d before the public deployment pass.
- Built the static export locally with npm run build:static after the GitHub Actions Hostinger workflow failed to start because the GitHub account was locked due to a billing issue.
- Mirrored the workflow locally by initializing the generated out directory as a hostinger-deploy branch payload, committing the static export as 5ecd726, and force-pushing hostinger-deploy to origin.
- Verified the remote hostinger-deploy branch points to 5ecd726a927949de27b4c3f5f066180c4884c839 and main points to be8047df4b8b05587db53b6976e721ce6bdc84c1.
- Confirmed <https://prahl.dev> returned HTTP 200 with a Hostinger response and a Monday, August 3, 2026 Last-Modified timestamp after the manual deploy.
- Confirmed the live <https://prahl.dev/projects/alla-vostra> page contained the new UI Foundations / UX Product Flow section content.

Validation Summary

- npm run check passed with tsc --noEmit during the final Iconography & Imagery section updates.
- npm run build passed with Next.js 16.2.10 and generated the expected static pages for /, /articles, /projects/alla-vostra, and /projects/cinerific.
- npm run build:static passed with NEXT_OUTPUT=export next build before the manual Hostinger deploy branch push.
- curl -I <http://127.0.0.1:3000/projects/alla-vostra> returned HTTP 200 during the local verification cycle.
- git push origin main reported Everything up-to-date because be8047d was already on origin/main.
- gh run list showed the automatic Hostinger workflow for be8047d failed before starting because the account was locked due to a billing issue.
- git -C out push --force --progress origin hostinger-deploy completed successfully, updating hostinger-deploy from b65dabe to 5ecd726.
- git ls-remote confirmed origin/main at be8047d and origin/hostinger-deploy at 5ecd726 after the manual deploy.
- curl -I <https://prahl.dev> returned HTTP 200, platform: hostinger, and Last-Modified: Tue, 04 Aug 2026 04:17:26 GMT.
- curl -sL <https://prahl.dev/projects/alla-vostra> confirmed the live page includes the new UI Foundations / UX Product Flow content.
- ./read_project.sh completed successfully after deployment and regenerated portfolio_PROJECT_SNAPSHOT.txt for current source context before this PDF generation pass.

Files Touched During August 3 Portfolio Work

- app/projects/alla-vostra/ProductFlowSwitcher.tsx - added the new client-side UI Foundations / UX Product Flow switcher, DOM flow diagram, UI category scaffolding, color/font/icon/photo/hero/icon sample renderers, and reveal logic wiring.
- app/projects/alla-vostra/page.tsx - replaced the old inline Product Flow section rendering with ProductFlowSwitcher while preserving the existing launchScreen and screenshotGroups data source.
- app/globals.css - added product-flow switcher styling, DOM diagram styling, UI Foundations

- swatch/font/photo/art/hero/icon presentation rules, responsive behavior, @font-face declarations, and heading/layout adjustments.
- public/fonts/alla-vostra/dream_avenue.ttf - added the Alla Vostra Dream Avenue font used by the Typography & Spacing sample.
- public/fonts/alla-vostra/tt_fors_trial_variable.ttf - added the Alla Vostra TT Fors variable font used by the Typography & Spacing sample and the Tutorial icon treatment.
- public/images/alla-vostra/truck1_square_whitefill.png, bargain_square_whitefill.png, and soflo_square.png - added original art assets for the Iconography & Imagery Original Art section.
- public/images/alla-vostra/piccola-product.png, sei-perfetto-product.png, and buon-natale-product.png - added product photography assets for the Original Photography section.
- public/images/alla-vostra/header-background-no-cheeseboard.png and cheeseboard-products-overlay.png - added layered header hero assets for the Original Hero section.
- next-env.d.ts - updated by the Next.js build/type-generation path from .next/dev/types/routes.d.ts to .next/types/routes.d.ts.
- portfolio_PROJECT_SNAPSHOT.txt - regenerated by ./read_project.sh after deployment for current project context.
- out/ - generated locally by npm run build:static and used as the manual hostinger-deploy branch payload; ignored by the Portfolio source snapshot and not part of the main source tree.
- portfolio_worklog_august3.pdf - generated as this August 3 Portfolio worklog artifact in the root-level Portfolio worklog convention.

Follow-Up Context

- The official website update was completed through the manual hostinger-deploy branch path because the configured GitHub Actions workflow could not run under the current GitHub account billing lock.
- Future normal deploys should return to the .github/workflows/hostinger-static-export.yml path once the GitHub Actions billing/account issue is resolved.
- The hostinger-deploy branch now contains a fresh static export from source commit be8047d, and prahl.dev served the updated content immediately after the branch push.
- The UI Foundations category system is now established enough for future category filling. Remaining placeholder-heavy categories include Navigations, Controls & Inputs, and Visual Hierarchy.
- The DOM-based UX Product Flow diagram should preserve vertical geometry during horizontal stretching. Future edits should adjust the shared coordinate data and CSS variables rather than returning to a static image.
- The Iconography & Imagery section now intentionally stops after Original Icons. Future additions should add explicit step titles and step arrays so placeholder stacks do not reappear unintentionally.
- The refreshed portfolio_PROJECT_SNAPSHOT.txt and this August 3 PDF are local documentation artifacts until the user requests or approves a documentation commit.
- Continue treating future Portfolio source, PDF, and snapshot changes as local-only unless the user explicitly asks to commit, push, deploy, publish, or update the public website.

Output Artifact

- Generated file: portfolio_worklog_august3.pdf.
- Location: /Users/prahlin/gh/portfolio/portfolio_worklog_august3.pdf.
- Naming follows the existing root-level Portfolio convention for a single daily PDF: portfolio_worklog_august3.pdf.

- Uses the same daily worklog structure and compact technical voice established by portfolio_worklog_july11.pdf through portfolio_worklog_august1_part3.pdf.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this artifact.
- The local project date used for this filename and title is Monday, August 3, 2026 EDT, following the user's August 3 date correction for this session.
