

Prahl Portfolio Work Log - September 27, 2026

Compiled summary for Sunday, September 27, 2026 - focus: continuing the Prahl.dev Portfolio Cinerific project page after the September 26 Product Flow switcher and diagram pass, verifying the United States Eastern date, running the customary project reader, extracting and studying all forty-one pre-existing Portfolio PDF worklogs, using the Alla Vostra project page as the accepted UI Foundations reference, adding the Cinerific promotional image and full UI Foundations section structure, aligning UX Product Flow names and eyebrows with the Cinerific diagram, assembling Cinerific-specific color, typography, spacing, logo, avatar, title-card, and animation assets, iterating portrait and landscape sizing by visible artwork bounds, adding Show More / Show Less behavior, building a layered perpetual loading spinner with pause-and-resume control, investigating a supplied Figma component, reverting the unsuccessful high-resolution spinner treatment, clearing the development cache, validating the final implementation, documenting committed source state 52051bd, refreshing the Portfolio project snapshot, and generating the September 27 Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after portfolio_worklog_september26.pdf and after the September 26 documentation state. The source state reviewed for this record is 52051bd039745ea74452e19d1b34b952bd463def on main, matching origin/main, titled Built out the Cinerific UI foundations showcase. The commit contains 903 insertions and 23 deletions across seventeen files, including Cinerific page and switcher source, shared styling, one font, and twelve new UI Foundations image assets. No Hostinger deploy-branch work or production deployment was performed during this record. The local documentation delta created after the source commit is the refreshed portfolio_PROJECT_SNAPSHOT.txt file and this September 27 root-level PDF worklog.

Source Materials Reviewed

- Verified the United States Eastern date with TZ=America/New_York date from /Users/prahlin/gh/portfolio. It reported Sunday, September 27, 2026 at approximately 4:40 PM EDT with UTC offset -0400, so the worklog uses September 27 rather than relying on a UTC calendar date.
- Ran ./read_project.sh and regenerated portfolio_PROJECT_SNAPSHOT.txt before composing this record, preserving the Portfolio convention that the current tree, assets, configuration, PDF inventory, Git context, and standing workflow instructions are refreshed for session documentation.
- Extracted and studied all forty-one pre-existing root-level Portfolio worklog PDFs with pdftotext: fifteen July records, fifteen August records, and eleven September records through portfolio_worklog_september26.pdf. The series contained 241 PDF pages and approximately 112,663 extracted words before this artifact.
- Compared the complete series for title cadence, root-level filename conventions, same-day part suffixes, opening-summary density, source-material language, baseline and goal framing, bullet-heavy technical voice, validation wording, files-touched treatment, follow-up continuity, and output-artifact closure.
- Used portfolio_worklog_september26.pdf as the closest chronological and subject baseline. The August and September Alla Vostra records supplied the most relevant history for UI Foundations stacks, responsive capture grids, Show More / Show Less behavior, visual asset sizing, and cache-sensitive browser review.
- Checked pdftinfo and pdffonts on the latest baseline. The mature output convention remains US Letter at 612 x 792 points, PDF 1.4, Helvetica and Helvetica-Bold Type 1 fonts, no encryption, Codex author/creator/producer metadata, and a repeated page footer.
- Reviewed commit 52051bd through git show, git log, git status, branch tracking, and the complete changed-file set. Confirmed main and origin/main resolve to the same commit after the source work was committed.
- Reviewed app/projects/cinerific/ProductFlowSwitcher.tsx, app/projects/cinerific/page.tsx, app/globals.css, the Cinerific UI Foundations font and image directories, and the corresponding Alla Vostra project-page structures used as the design and interaction reference.
- Reviewed the Cinerific application repository during the asset-selection pass and used its current logos, avatar bubbles, title-card variants, and spinner layers rather than inventing replacements unrelated to the app.

Baseline Status Before September 27 Work

- The September 26 pass had established the Cinerific UI Foundations / UX Product Flow switcher, section-bounded sticky behavior, hash-aware selection, and a responsive DOM diagram. UX Product Flow was complete enough for review, while UI Foundations intentionally contained only its heading.
- The accepted Alla Vostra page already demonstrated the desired foundation-section anatomy: green eyebrow labels, white section headings, square cards, compact asset stacks, responsive two-column arrangements, and conditional Show More / Show Less controls.
- Cinerific had real brand colors, fonts, logos, avatars, title cards, and loading artwork in its application repository, but none of those materials had been assembled into the Portfolio case-study page.
- The existing Cinerific screenshot groups still carried older commerce-oriented section names and numbered stage eyebrows that no longer matched the Welcome, Preview, Browse Selection, Favorites, and Settings rails in the new UX diagram.
- The user required the visual widths to be judged by the visible artwork rather than raw file dimensions because the logo and spinner source images contained uneven transparent padding.
- The development server was susceptible to stale Turbopack output during repeated source and asset replacement, making explicit cache clears part of reliable visual verification.

Goals for September 27

- Populate the Cinerific UI Foundations view with a real project image and the same section hierarchy, visual language, and expansion behavior already accepted on the Alla Vostra page.
- Align all UX Product Flow group eyebrows and section names with the diagram while retaining the existing screenshot collections and their responsive behavior.
- Present Cinerific-specific colors, hexadecimal values, fonts, spacing scales, logos, avatars, title cards, and animation assets without importing Alla Vostra content into the Cinerific identity system.
- Match square-card proportions, standalone centered rows, visible artwork widths, image rounding, responsive stack widths, and Show More / Show Less placement across portrait, medium landscape, and widest landscape layouts.
- Build a perpetually rotating Cinerific loading spinner with an accessible control that pauses in place and resumes from the exact stopped phase.
- Investigate the supplied Figma component when the initial spinner layers appeared visually weak, but preserve the previously accepted implementation if the attempted replacement reduced quality.
- Run TypeScript, asset, route, browser-state, and cache-reset checks; preserve the current committed state; refresh the project snapshot; and document the result in the established PDF format.

Work Completed - UI Foundations and UX Product Flow Structure

- Added the Cinerific promotional image directly below the white UI Foundations heading, using the existing landing-page artwork inside a bordered, rounded, shadowed feature frame.
- Added UI Foundations sections for Colors & Theming, Typography & Spacing, Iconography & Imagery, Animations, Navigations, Controls & Inputs, and Visual Hierarchy. Each section uses the consistent green UI FOUNDATIONS eyebrow and white heading treatment established by Alla Vostra.
- Added reusable foundation card, stack, and expandable-group components inside ProductFlowSwitcher.tsx so the page can render Cinerific-specific content while preserving the shared Portfolio capture vocabulary.
- Added responsive Show More / Show Less controls with chevron states, matching the accepted width, placement, and reveal behavior. Narrow layouts initially expose one group while wider layouts expose two before offering the additional material.
- Renamed the UX Product Flow screenshot sections from Browse, Cart, Customer Details, Payment, and Confirmation to Welcome, Preview, Browse Selection, Favorites, and Settings.
- Replaced numbered Stage eyebrows with UX PRODUCT FLOW throughout the screenshot groups and standardized their expansion labels to Show More and Show Less.
- Kept Welcome and Browse Selection at the existing two-stack collapsed threshold while preserving the remaining groups' complete initial presentation.

Work Completed - Colors, Fonts, and Spacing

- Built square color cards for Primaries, Accents, and Neutrals using the Cinerific palette: Aubergine #23001F, Electric Violet #600878, Focus Lavender #C86BE0, Marquee Gold #FFC91B, Cinema Black #080007, and Projector Silver #E7E7E7.
- Centered the two-card Neutrals stack as a standalone row, matching the Alla Vostra section's handling of a single remaining color group rather than leaving it aligned to one side of a multi-column grid.

- Added the Cinerific Manrope variable font under public/fonts/cinerific and registered it through a dedicated @font-face rule with weights 200 through 900.
- Named the typography group Fonts and reduced it to the two identity-relevant samples requested by the user: Manrope for the application interface and Broadway for the avatar-name and logo treatment.
- Replaced the temporary logo sample inside the Broadway square with a dedicated Broadway word artwork, labeled the sample Broadway, and removed the earlier Logo + Avatar Names and App UI / 200-900 descriptions.
- Added square Component Spacing and Layout Spacing samples with the app-derived scales 8, 14, 20, and 24 dp plus 34, 50, 72, and 80 dp, using Cinerific violet-to-lavender bars on its dark visual surface.

Work Completed - Logos, Avatars, and Title Cards

- Added a Logo stack under Iconography & Imagery using separate with-googly-eyes and without-googly-eyes presentations. Removed the temporary purple card backgrounds so each transparent logo appears directly on the page grid.
- Reordered the logo variants to the accepted left-to-right arrangement and enlarged both by visible artwork bounds rather than by their 1400 x 1000 source canvases. A 149 percent internal artwork width, negative side margins, and a small horizontal correction compensate for uneven transparent space.
- Added the four newest Cinerific avatar bubbles as a compact two-by-two grid: Steve labeled BOY, Janny labeled GIRL, Martin labeled GENDER NEUTRAL, and the neutral guest profile labeled GUEST.
- Swapped the requested gender-label positions while retaining the avatar-image identities and arranged the complete avatar group at the same collective width as the surrounding foundation stacks.
- Added a Title Cards stack with the two One Last Breath assets from the Cinerific repository: the 700 x 526, 350:263 card used DURING NAVIGATION and the 1194 x 834, 199:139 artwork used IN HERO.
- Matched the navigation card's rounded corners to its in-app presentation and retained the edge-to-edge hero treatment for the wider hero asset.
- Added all twelve final Cinerific UI Foundations image assets to the Portfolio repository: four avatars, two logo layers, two title cards, one Broadway word sample, and three spinner layers.

Work Completed - Responsive Width and Expansion Refinement

- Iterated the Logo, Avatars, and Title Cards stacks across phone portrait, medium landscape, and widest landscape layouts until they aligned visually with the Colors & Theming and Typography & Spacing stacks.
- Standardized the desktop reference width at 318px for each individual logo presentation, the collective two-by-two avatar grid, each individual title card, and the loading-spinner demonstration.
- Used a portrait formula based on two min(42vw, 146px) columns plus a 12px gap so the logo, avatar, title-card, and spinner groups resolve to the same narrow-screen width without overflowing 320px and 390px viewports.
- Preserved 152px avatar cards with a 14px desktop gap and reduced those values responsively for phones, allowing the collective avatar width to remain the comparison target for the other media stacks.
- Corrected the widest-landscape logo presentation separately from medium landscape, then rebalanced portrait after those changes so desktop improvements did not narrow or enlarge the phone treatment unexpectedly.
- Judged alignment from the visible logo and spinner edges rather than trusting canvas dimensions, directly addressing the source files' larger transparent gap on one side.

Work Completed - Animation Spinner and Figma Rollback

- Added Animations as a new UI Foundations category and created a Loading Spinner stack using the three corrected Cinerific application layers: red star, central wheel, and mini star.
- Implemented perpetual linear rotation using the app-derived relative timing: 2800ms and 720 degrees for the red star, 4179ms and 720 degrees for the wheel, and 4242ms and 360 degrees for the mini star.
- Scaled the composite spinner by visible artwork bounds to match the 318px foundation width instead of treating the transparent 416 x 422 source canvases as the visible edge.
- Added an accessible circular pause control below the spinner. Pausing applies animation-play-state: paused to every layer, swaps the icon and aria-label to Resume loading spinner, and resumes from the preserved animation phase rather than restarting.
- Investigated the original multi-frame Figma component supplied at node 319:6227 after the first extracted spinner appeared visually rough. Attempted higher-resolution replacement layers and smoothing changes, then reverted all post-link changes when the result did not meet the user's visual standard.

- Restored the original application-derived PNG layers, pre-Figma timing, scale, and pause behavior; removed the attempted high-resolution repository assets; and retained only a recoverable temporary archive outside the project tree during the rollback.
- Cleared the generated .next cache after the asset reversal, restarted the development server, and confirmed the restored spinner files returned HTTP 200 instead of stale image-cache responses.

Validation Summary

- npm run check passed with tsc --noEmit after the final implementation and again during the documentation pass.
- Confirmed commit 52051bd contains 903 insertions and 23 deletions across seventeen files, including the Manrope font and twelve Cinerific UI Foundations images.
- Confirmed main and origin/main match at 52051bd. The only local change before this PDF was the customary refreshed portfolio_PROJECT_SNAPSHOT.txt generated for documentation.
- Verified the Cinerific project route returned HTTP 200 from the restarted local Next.js server after the cache reset.
- Confirmed the three restored spinner sources returned HTTP 200 individually and that no high-resolution Figma-derived spinner references or assets remained in the repository.
- Browser automation confirmed the spinner pause state remained stable over time and changed its accessible control label to Resume loading spinner. The restored Next Image URLs resolve to the red-star, wheel, and mini-star PNG assets.
- Verified the final UI structure contains consistent UI FOUNDATIONS and UX PRODUCT FLOW eyebrows, the requested section names, and Show More / Show Less controls where additional asset groups exist.
- Verified source image dimensions for the four avatars at 1270 x 1270, logo layers at 1400 x 1000, spinner layers at 416 x 422, title cards at 700 x 526 and 1194 x 834, and the Broadway word artwork at 460 x 40.
- The refreshed snapshot contains generated source excerpts with trailing whitespace, so git diff --check reports those snapshot lines even though the application source check passed. This is a property of the customary snapshot generator output, not a TypeScript or runtime failure.
- No static export, GitHub Actions dispatch, Hostinger synchronization, deploy-branch update, or production publish was performed during this session.

Files Touched and Artifacts

- app/projects/cinerific/ProductFlowSwitcher.tsx - added the UI Foundations data, responsive asset components, expandable groups, spinner behavior, promotional image integration, and revised UX Product Flow labels.
- app/projects/cinerific/page.tsx - renamed the five screenshot groups, replaced numbered stage eyebrows, standardized expansion labels, and preserved the existing responsive capture content.
- app/globals.css - registered Cinerific Manrope and added Cinerific-specific square-card, stack, logo, avatar, title-card, spacing, spinner, portrait, landscape, and expansion-control styling.
- public/fonts/cinerific/manrope.ttf - added the variable application typeface used by the Cinerific foundation samples.
- public/images/cinerific/ui-foundations/ - added the final avatar, Broadway, spinner, logo, and One Last Breath title-card assets used by the project page.
- portfolio_PROJECT_SNAPSHOT.txt - refreshed through ./read_project.sh for the September 27 documentation pass so it records the committed UI Foundations source, asset inventory, worklog inventory, and current Git context.
- portfolio_worklog_september27.pdf - generated as this new root-level dated Portfolio documentation artifact.

Follow-Up Context

- Navigations, Controls & Inputs, and Visual Hierarchy now have correctly styled UI Foundations section headers but remain ready for later Cinerific-specific asset collections.
- The loading spinner currently uses the corrected application-derived PNG layers restored after the Figma experiment. If the user edits the component directly in Figma, future replacement assets should preserve the accepted visible width, independent rotation timing, and pause-in-place behavior.
- Logo and spinner sizing intentionally compensates for transparent source padding. Future asset replacements should be evaluated by visible artwork edges before removing the width, margin, translation, or scale corrections.

- The logo, collective avatar grid, individual title cards, and spinner demonstration share the 318px desktop target and the same narrow portrait formula. Future responsive changes should verify all four as a set.
- The UX screenshot-group names now mirror the diagram rails. Future screenshot copy can be rewritten around the Cinerific media experience without reverting the accepted Welcome, Preview, Browse Selection, Favorites, and Settings taxonomy.
- The current source is committed at 52051bd and matches origin/main. This PDF and the refreshed snapshot are documentation artifacts created after that source commit.
- As with prior Portfolio work, ask for the commit message before committing or pushing the refreshed snapshot or this PDF unless the user explicitly supplies the message and requests the operation.

Output Artifact

- Created /Users/prahlin/gh/portfolio/portfolio_worklog_september27.pdf.
- Used the established filename because this is the first Portfolio worklog for September 27, 2026; no Part suffix was needed.
- Produced a US Letter, PDF 1.4, unencrypted document using Helvetica and Helvetica-Bold with Codex title, subject, author, creator, and producer metadata.
- Preserved the established dense technical narrative, section ordering, repeated page footer, and end-of-document continuity notes used by the recent Portfolio worklog series.
- Source state reviewed: 52051bd039745ea74452e19d1b34b952bd463def on main and origin/main.
- No source commit, push, deploy, Hostinger synchronization, or production publish was performed as part of generating this PDF artifact.
