

Prahl Portfolio Work Log - September 12, 2026 (Part 2)

Compiled summary for Saturday, September 12, 2026 - Part 2 - focus: continuing the Prah.dev Portfolio refinement after the September 12 Part 1 Overview-media and Interactive Demo pass, reviewing the refreshed project snapshot and every pre-existing Portfolio PDF worklog, standardizing all six Alla Vostra UX Product Flow eyebrows, replacing device-oriented stage captions with concise product-journey descriptions, enlarging the Martin Prah profile name tag while preserving its centered relationship to the portrait, removing the invisible Articles navigation link without deleting the Articles route, preserving exact navbar geometry through an empty responsive layout slot, matching the landing-page proof-stat typography and resizing behavior to the Alla Vostra counterpart, clearing stale local development cache, validating routes, TypeScript, responsive browser geometry, and text clipping, documenting committed source state b5c85aa, refreshing the Portfolio project snapshot, and generating the September 12 Part 2 Portfolio PDF worklog.

Generated in continuity with the established Prahlin Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahlin/portfolio work performed after portfolio_worklog_september12_part1.pdf and after the September 12 Part 1 documentation state. The source state reviewed for this record is b5c85aa45a709900b14eadc506865a6889321abb on main, titled Refined landing-page presentation and Alla Vostra UX flow. No public deployment, Hostinger deploy-branch work, remote synchronization, production publish, or external source inspection was performed during this record. The local documentation delta created before this PDF was the refreshed portfolio_PROJECT_SNAPSHOT.txt file; this PDF is the new September 12 Part 2 root-level documentation artifact.

Source Materials Reviewed

- Verified the United States Eastern date with TZ=America/New_York date during the documentation pass, which reported Saturday, September 12, 2026 shortly before midnight EDT with UTC offset -0400. The worklog therefore uses September 12, 2026 and the requested Part 2 suffix.
- Ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt before writing this worklog, preserving the Portfolio convention that the current source snapshot is refreshed before session documentation.
- Reviewed the refreshed portfolio_PROJECT_SNAPSHOT.txt for the current source tree, image and PDF inventories, package scripts, git context, generated-cache policy, route structure, source dumps, deployment workflow notes, and standing instruction to ask for a commit message before committing or pushing.
- Extracted and studied all thirty-six pre-existing root-level Portfolio PDF worklogs with pdftotext: the July 11, 14, 15 Part 1, 15 Part 2, 16, 19, 20, 21, 22, 23, 24, 25, 29, 30, and 31 records; the August 1 Parts 1-3, August 3, 4, 5, 6, 10 Parts 1-2, 11, 12 Parts 1-2, 14, 16, and 24 records; and the September 7, September 8, September 8 Part 2, September 9, September 11, and September 12 Part 1 records.
- Compared the complete series for title cadence, root-level filename conventions, same-day part suffixes, opening-summary density, section order, technical bullet style, validation language, files-touched treatment, follow-up continuity, and output-artifact closure. Mature records generally run five to seven US Letter pages and roughly 2,400 to 3,300 words.
- Checked pdftinfo and pdffonts on the latest September 12 Part 1 baseline. The accepted output convention remains 612 x 792 point US Letter pages, PDF 1.4, Helvetica and Helvetica-Bold Type 1 fonts, an unencrypted document, and Codex author, creator, and producer metadata.
- Reviewed commit b5c85aa through git show, git log, git status, and the complete fd743d3..b5c85aa source diff across app/PortfolioSections.tsx, app/globals.css, app/projects/alla-vostra/ProductFlowSwitcher.tsx, app/projects/alla-vostra/page.tsx, and portfolio_PROJECT_SNAPSHOT.txt.
- Kept the documentation pass local-only under the reinforced Portfolio workflow rule: no public pulls, no

Hostinger inspection, no deploy-branch work, no remote synchronization, no push, and no production publish unless explicitly requested.

Baseline Status Before September 12 Part 2 Work

- The September 12 Part 1 state had reorganized the Alla Vostra Overview around paired App Store and Google Play media stacks, tightened the Overview narrative, restored the preferred feature image, shortened release chips, added an Interactive Demo placeholder, and changed the hero Google Play button to a white surface.
- Alla Vostra UX Product Flow still labeled its six screenshot groups as Stage 01 through Stage 06, even though the surrounding switcher and section title already used UX Product Flow language.
- The Tutorial caption remained a future-tense placeholder, while Browse and SHOP explicitly mentioned Android Small and Large and the remaining group captions used longer implementation-oriented wording.
- The landing-page Martin Prahll tag used its original 12px text and badge scale beneath the circular profile photograph.
- The main navigation retained a real /articles anchor made invisible with opacity: 0. Although visually hidden, it remained a focusable navigation target and still exposed Articles semantics in the navbar.
- The Articles page itself remained a valid repository route and needed to stay intact even after its hidden top-navigation entry was removed.
- The landing-page proof values used a fixed 34px font while the Alla Vostra proof values used a 30px-to-66px responsive clamp with overflow protection; their narrow-screen labels also followed different responsive sizing rules.
- A local Next.js development server was already part of the session workflow, but stale Turbopack output again required an explicit generated-cache reset before final browser verification.

Goals for September 12 Part 2

- Replace Stage 01 through Stage 06 with one consistent UX Product Flow eyebrow across all six Alla Vostra screenshot groups.
- Rewrite each gray group caption as one concise sentence focused on the customer journey, with no Android, Small, or Large language in those section descriptions.
- Increase the Martin Prahll profile tag by exactly 20 percent while keeping it centered beneath the profile photo at desktop and narrow viewports.
- Remove Articles completely from the navigation without deleting the Articles page and without changing the order, alignment, or placement of any visible navbar element at any responsive breakpoint.
- Give the landing-page 3yrs, 1.0k, 0.1k, and 8 proof stack the exact font sizing, scaling, overflow, and label-resizing behavior used by the Alla Vostra proof stack.
- Clear local development cache safely, restart the local server, and validate the final experience with TypeScript, route checks, computed-style comparisons, responsive geometry probes, and desktop/mobile screenshots.
- Preserve all unrelated page content, routes, assets, navigation labels, spacing, project-card systems, and deployment state while documenting the final committed source accurately.

Work Completed - Alla Vostra UX Product Flow Language

- Changed the Tutorial group eyebrow from Stage 01 to UX Product Flow and changed the generated Stage 02 through Stage 06 labels to the same UX Product Flow text.
- Removed the now-unused screenshotGroups map index after stage numbers no longer depended on `String(index + 2).padStart(2, "0")`.
- Replaced the Tutorial placeholder with: A guided walkthrough introduces the core experience before ordering begins.
- Rewrote Browse to explain that customers explore product selection and brand philosophy and can contact the business owner directly with questions or comments.
- Rewrote SHOP to describe focused product discovery and selection, and rewrote Cart to emphasize clear empty and filled states for reviewing selections.
- Rewrote Checkout around focused contact, delivery, and payment steps, and rewrote Confirmation around a clear success state that completes the journey and confirms the order.
- Kept all screenshot stacks, image sources, Show More and Show Less controls, group ordering, preview

- behavior, and surrounding UI Foundations switcher behavior unchanged.
- Confirmed that the six gray section descriptions no longer mention Android, Small, or Large while leaving size-specific screenshot metadata and internal asset naming untouched.

Work Completed - Landing-Page Profile and Navigation

- Scaled the Martin Prahll profile tag to 1.2 with a center-top transform origin, producing the requested 20 percent increase without changing the portrait dimensions or profile-orbit positioning.
- Preserved horizontal centering through the existing profile-orbit flex alignment and kept the tag's top edge anchored beneath the portrait so visual growth extends downward rather than collapsing the established photo gap.
- Removed the real /articles anchor from getNavItems and introduced a generic non-interactive spacer path in NavLinkItem so no invisible link remains in keyboard or accessibility navigation.
- Removed the Articles label from the navbar entirely and rendered the structural slot as an empty aria-hidden span with pointer events disabled.
- Measured the prior invisible link's exact outer dimensions before removal and carried those dimensions into the empty slot for desktop, 980px, 720px, 430px, 380px, and 340px breakpoints.
- Locked the empty slot with matched width, minimum width, and height values, including subpixel corrections, so Stack and every remaining visible link retained the former coordinates in one-row and two-row navbar layouts.
- Confirmed through live DOM checks that navbar text no longer contains Articles, no a[href="/articles"] element remains, and the empty slot is hidden from assistive technology.
- Kept app/articles/page.tsx, Articles content, the /articles route, visible nav order, separators, brand card, responsive row split, and every other navbar label unchanged.

Work Completed - Shared Proof-Stat Typography

- Moved the Alla Vostra proof-value typography into the shared .stats-strip strong rule because ProofStats has exactly two consumers and both now require identical resizing behavior.
- Changed proof values from a fixed 34px size to clamp(30px, calc(6vw + 8px), 66px), matching the Alla Vostra minimum, viewport response, and maximum.
- Applied the same max-width: 100%, overflow: hidden, and white-space: nowrap protections to both proof stacks so larger values remain bounded by their cells.
- Moved the narrow-screen label and hidden measurement text to shared rules using clamp(12px, 3.2vw, 16px) with 1.16 line height, preserving ProofStats line-fit calculations.
- Retained the component's ResizeObserver, document-font readiness check, one-, two-, and three-line label modes, screen-reader labels, and content-width measurement logic.
- Kept the landing-page proof card grid, card height, padding, borders, spacing, values, captions, and placement unchanged; only font size and resizing properties were unified.
- Verified matching computed typography at 1440px, 980px, 720px, 390px, and 320px, including 66px desktop values, 51.2px values at 720px, 31.4px values at 390px, and the 30px minimum at 320px.
- Confirmed that both proof stacks reported identical value font size, line height, maximum width, overflow, white-space, label font size, and label line height, with no card-level clipping at any tested width.

Work Completed - Local Cache, Validation, and Commit Context

- Booted the local Next.js 16.2.10 Turbopack server at http://localhost:3000 and verified the landing page and Alla Vostra project page through the local browser workflow.
- Cleared the requested development cache by stopping the server, confirming the generated .next directory at approximately 129 MB, moving it safely to /tmp/portfolio-next-cache.m5Wbmn/.next, and restarting the dev server for a clean compile.
- Used a recoverable move because the execution environment rejected direct recursive deletion; no project source or user-authored artifact was removed.
- Ran repeated Playwright geometry probes while replacing the Articles anchor, including checks at 1920px, 1440px, 981px, 980px, 720px, 430px, 390px, 380px, 340px, and 320px.
- Rendered desktop and full-page mobile screenshots to inspect the enlarged profile tag, navbar stability, and final landing-page proof typography without adding repository screenshot artifacts.

- Provided the requested past-tense commit message with one header and hyphen-prefixed points covering navigation, profile identity, proof typography, Alla Vostra flow language, and snapshot context.
- Recorded committed source state b5c85aa45a709900b14eadc506865a6889321abb, authored locally as Refined landing-page presentation and Alla Vostra UX flow.
- Performed no source commit, push, Hostinger action, deploy-branch synchronization, production publication, or remote inspection as part of generating this Part 2 documentation artifact.

Validation Summary

- Ran npm run check after the Alla Vostra copy changes, profile-tag scaling, navbar restructuring, and proof-stat unification; TypeScript completed successfully with tsc --noEmit.
- Ran git diff --check throughout the implementation and final documentation review; application source carried no whitespace errors before commit b5c85aa.
- Verified http://localhost:3000 and http://localhost:3000/projects/alla-vostra returned HTTP 200 from the local Next.js server after the clean-cache restart.
- Verified http://localhost:3000/articles returned HTTP 200 after the navbar entry was removed, confirming the repository page and route remained intact.
- Confirmed the final navbar contained neither Articles text nor an /articles anchor and retained the measured legacy slot geometry at desktop, tablet, and narrow mobile breakpoints.
- Confirmed the Martin Prahll tag remained centered under the profile photo in desktop and full-page 390px visual captures without incoherent overlap.
- Compared landing-page and Alla Vostra proof computed styles side by side at five viewport widths and confirmed exact matches with no horizontal content clipping down to 320px.
- Reviewed git status after commit b5c85aa and before the documentation refresh; the source work was clean. Running read_project.sh then modified only portfolio_PROJECT_SNAPSHOT.txt before this new PDF was written.

Files Touched and Artifacts

- app/PortfolioSections.tsx - removed the Articles navigation item and link behavior, added a generic empty-spacer nav item path, and preserved the rest of the shared main-navigation rendering.
- app/globals.css - replaced the hidden Articles-link rule with breakpoint-matched empty-slot dimensions, scaled the Martin Prahll tag by 20 percent, and unified proof value and label resizing rules across the landing and Alla Vostra pages.
- app/projects/alla-vostra/ProductFlowSwitcher.tsx - renamed all six stage eyebrows to UX Product Flow, replaced the Tutorial description, and removed the obsolete generated-stage index.
- app/projects/alla-vostra/page.tsx - replaced the Browse, SHOP, Cart, Checkout, and Confirmation gray captions with concise customer-journey descriptions.
- portfolio_PROJECT_SNAPSHOT.txt - refreshed through ./read_project.sh so the snapshot records committed source b5c85aa, the latest source dumps, and the current PDF inventory before Part 2 generation.
- portfolio_worklog_september12_part2.pdf - generated as this new root-level dated Part 2 Portfolio documentation artifact.

Follow-Up Context

- The Articles page remains in the repository and available at /articles, but the main navbar intentionally exposes no Articles text, link, focus target, or accessibility label.
- The empty nav layout slot is intentional. It preserves the exact placement of Stack and all later nav items; removing that structural slot would reflow the desktop row and mobile top-row distribution.
- Future navbar breakpoint changes should preserve or deliberately recalculate the slot dimensions rather than reintroducing hidden text or an invisible focusable anchor.
- The landing-page and Alla Vostra proof stacks now share one typography source of truth. Future changes to .stats-strip strong or the narrow-screen label rules will affect both pages by design.
- The landing proof grid retains its shorter card dimensions and spacing while sharing only Alla Vostra's font and resizing behavior, matching the user's requested scope.
- The six UX Product Flow eyebrows and concise captions are accepted section-level language; size-specific

- screenshot titles, labels, captions, and filenames still exist internally for capture organization.
- The old local .next cache remains recoverable at /tmp/portfolio-next-cache.m5Wbmn/.next. A future cache reset can use the same stop, move, restart pattern if direct deletion remains blocked.
- The local-only Portfolio rule remains active: do not pull public state, inspect Hostinger or deploy branches, push, synchronize, or publish unless the user explicitly requests it.

Output Artifact

- Generated: /Users/prahlin/gh/portfolio/portfolio_worklog_september12_part2.pdf
- Companion sync file: /Users/prahlin/gh/portfolio/portfolio_PROJECT_SNAPSHOT.txt
- Source state reviewed: b5c85aa45a709900b14eadc506865a6889321abb on main.
- Naming follows the established same-day convention: portfolio_worklog_september12_part2.pdf.
- The document records the September 12 Part 2 Alla Vostra UX Product Flow language pass, landing-page profile and navigation refinement, shared proof-stat typography, local cache clearing, responsive verification, committed source context, refreshed snapshot, and documentation work in the established Prahlin Portfolio format.
- This worklog closes the September 12 Part 2 documentation pass. No source commit, push, deployment, public publish, Hostinger synchronization, or remote inspection was performed as part of generating the PDF.
