

Prahl Portfolio Work Log - September 8, 2026

Compiled summary for Tuesday, September 8, 2026 - focus: continuing the Prahl.dev Portfolio Alla Vostra UI Foundations Visual Hierarchy section after the September 7 overview-image and annotation pass, re-running the project reader, studying the refreshed snapshot and every pre-existing Portfolio PDF worklog, keeping the local Next.js site available at <http://127.0.0.1:3000>, clearing stale development cache when requested, tuning the On-Scrolling secondary image fade so it reaches full opacity through the same visual band as the tertiary mosaic image, balancing the top white-nav and bottom orange-bar gradient treatment, matching Secondary and Tertiary focal braces to the accepted Pre-Scrolling brace weight, height, and alignment, pruning redundant NAV BAR and SHOPPING CART callout pairs, centering the Tertiary MAIN CONTENT callout, aligning Secondary and Tertiary stacks beneath the On-Scrolling primary frame, protecting one-column horizontal space without introducing awkward gaps, validating TypeScript, local route health, static export, and Playwright-rendered geometry, refreshing the Portfolio project snapshot, and generating the September 8 Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after `portfolio_worklog_september7.pdf` and after the September 7 documentation state. The source commit reviewed for this record is `9162c6b10b7c9929e3126c193ec7bb00894b9ae2` on main, matching origin/main before this PDF was generated. That commit contains the Alla Vostra Visual Hierarchy source and snapshot work described here. Local TypeScript and static-export validation passed. No new deployment, publish, Hostinger synchronization, or additional source commit was performed during this worklog-generation pass; the local documentation deltas created for this record are the refreshed `portfolio_PROJECT_SNAPSHOT.txt` file and this September 8 PDF worklog.

Source Materials Reviewed

- Verified the United States Eastern date with TZ=America/New_York date, which reported Tuesday, September 8, 2026 at 7:52 PM EDT during the worklog pass.
- Ran `./read_project.sh` from `/Users/prahlin/gh/portfolio` and regenerated `portfolio_PROJECT_SNAPSHOT.txt` before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed `portfolio_PROJECT_SNAPSHOT.txt`, including project notes, source tree, public image inventory, PDF worklog inventory, deployment archive inventory, package and deployment configuration, current git context, recent commits, generated/cache ignore policy, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF:
`portfolio_worklog_july11.pdf`, `portfolio_worklog_july14.pdf`,
`portfolio_worklog_july15_part1.pdf`, `portfolio_worklog_july15_part2.pdf`,
`portfolio_worklog_july16.pdf`, `portfolio_worklog_july19.pdf`,
`portfolio_worklog_july20.pdf`, `portfolio_worklog_july21.pdf`,
`portfolio_worklog_july22.pdf`, `portfolio_worklog_july23.pdf`,
`portfolio_worklog_july24.pdf`, `portfolio_worklog_july25.pdf`,
`portfolio_worklog_july29.pdf`, `portfolio_worklog_july30.pdf`,
`portfolio_worklog_july31.pdf`, `portfolio_worklog_august1_part1.pdf`,
`portfolio_worklog_august1_part2.pdf`, `portfolio_worklog_august1_part3.pdf`,

`portfolio_worklog_august3.pdf`, `portfolio_worklog_august4.pdf`,
`portfolio_worklog_august5.pdf`, `portfolio_worklog_august6.pdf`,
`portfolio_worklog_august10_part1.pdf`, `portfolio_worklog_august10_part2.pdf`,

portfolio_worklog_august11.pdf, portfolio_worklog_august12_part1.pdf, portfolio_worklog_august12_part2.pdf, portfolio_worklog_august14.pdf, portfolio_worklog_august16.pdf, portfolio_worklog_august24.pdf, and portfolio_worklog_september7.pdf.

- Extracted text from all thirty-one existing Portfolio PDFs with pdftotext to preserve title cadence, daily and same-day part naming, opening-summary density, section order, compact bullet-heavy technical voice, validation language, files-touched lists, follow-up context, output-artifact close, and root-level filename style.
- Checked recent PDF metadata with pdfinfo and pdffonts. The mature Portfolio artifacts use letter-size pages, PDF 1.4 output, Helvetica Type 1 text, Codex author/creator/producer metadata, no custom metadata stream, and root-level filenames in the portfolio_worklog_monthday pattern.
- Used portfolio_worklog_september7.pdf as the closest chronological and structural baseline, with portfolio_worklog_august24.pdf, portfolio_worklog_august16.pdf, and portfolio_worklog_august14.pdf as supporting references for Visual Hierarchy, fade-mask, responsive-layout, screenshot-preview, cache-clearing, and browser-measurement language.
- Reviewed git history and state through git log, git show --stat, git show --name-status, git status, git diff --stat, git diff --name-status, package scripts, local validation output, local route checks, and the current root-level Portfolio PDF inventory. HEAD and origin/main resolved to 9162c6b before this PDF was generated.
- Reviewed app/projects/alla-vostra/ProductFlowSwitcher.tsx, app/globals.css, portfolio_PROJECT_SNAPSHOT.txt, the existing Visual Hierarchy image assets, the generated .next stale-cache folders, package.json scripts, and the local /projects/alla-vostra route.

Baseline Status Before September 8 Work

- September 7 left the Alla Vostra Visual Hierarchy section centered around a mature Pre-Scrolling reference model: large primary Viewing Area annotation, compact Secondary/Tertiary/Quaternary focal stacks, rotated green eyebrow labels, white section lines, and no-device-frame small-stack treatments where requested.
- The On-Scrolling row still needed more detailed parity with that accepted Pre-Scrolling model. The Secondary and Tertiary stacks had to align visually with the earlier row, while still living inside the vertical bounds implied by the On-Scrolling primary device frame.
- The On-Scrolling secondary image had been derived from the primary home-screen bitmap, but the user wanted it to fade in to full opacity like the Tertiary mosaic image rather than reading as an abrupt or mismatched image block.
- The top of that fade intersected the white nav bar and the bottom intersected a narrow orange cart-control strip. The user clarified that full opacity should sit below the white nav bar and above the orange bar, with the top becoming fully visible by the point the mosaic image begins and the bottom becoming fully visible by the time the sticky cart button is reached.
- Early top-gradient adjustments either left the white nav bar too visible or hid its vertical fade almost entirely, so the top mask needed a measured middle setting rather than another extreme change.
- Secondary and Tertiary focal braces needed to match the thicker Pre-Scrolling brace

strokes, then become slightly taller without changing contour, line shape, or stroke thickness.

- Focal Point label positions were still being tuned independently for Secondary and Tertiary. Tertiary needed an upward nudge, while Secondary later needed to move down relative to its image center after the taller brace was restored.
- Redundant NAV BAR callout pairs remained on the On-Scrolling Secondary and Tertiary

stacks, and the Tertiary SHOPPING CART callout pair was no longer wanted.

- The Tertiary MAIN CONTENT callout needed to sit at the exact vertical center of its image, instead of lower in the image field.
- Narrow and portrait layouts could center the small images under the primary stack, but the outer focal annotation lane risked clipping or crowding at 320px-wide portfolio views. The final responsive guard needed to protect horizontal space without creating visibly awkward dead space.
- The local development workflow still required explicit cache clearing because repeated Turbopack and CSS changes could appear unchanged until stale .next output was moved aside and the dev server was restarted.

Goals for September 8

- Verify the active United States Eastern date and produce the next root-level Portfolio PDF worklog using the established naming convention.
- Keep the Alla Vostra page running locally so visual hierarchy changes could be inspected at <http://127.0.0.1:3000/projects/alla-vostra>.
- Tune the On-Scrolling Secondary fade treatment so the image reaches full opacity in the same practical viewing band as the Tertiary mosaic image.
- Balance the top fade over the white nav bar and the bottom fade over the tiny orange cart bar without letting either edge look abrupt.
- Match Secondary and Tertiary Focal Point brace thickness to the accepted Pre-Scrolling brace system, then increase their vertical reach while preserving the existing stroke contour.
- Align the Secondary and Tertiary stacks with their Pre-Scrolling counterparts so focal labels, braces, headers, images, white lines, and green labels share the same horizontal language.
- Distribute the On-Scrolling Secondary and Tertiary stacks cleanly between the top and bottom edges of the On-Scrolling primary device frame so nothing clips above or below the primary frame.
- Tighten the Secondary header-to-image relationship without changing the Tertiary stack when the user asked for that more specific adjustment.
- Remove the exact unwanted NAV BAR and SHOPPING CART line/green-header pairs while preserving the remaining useful MAIN CONTENT and SHOPPING CART callouts.
- Center the Tertiary MAIN CONTENT pair vertically on its image.
- Center Secondary and Tertiary under Primary in one-column and portrait layouts, then protect the side-lane spacing without introducing awkward gaps.
- Validate the result with TypeScript, static export, local route checks, Playwright-rendered measurements, screenshot inspection, and refreshed project documentation.

Work Completed - Project Orientation, Local Server, and Cache Handling

- Started the broader September 8 work cycle by running `read_project.sh` and studying the refreshed Portfolio snapshot and pre-existing worklog sequence before touching the Alla Vostra flow files.
- Continued work from the local Next.js development server at <http://127.0.0.1:3000>, with `/projects/alla-vostra` used as the live review route.

- Kept the portfolio-dev screen workflow active and checked port 3000 with `lsif` when verifying that the dev server was still listening on 127.0.0.1.
- Cleared local development cache when requested by moving stale .next output aside into timestamped .next.stale-* folders and restarting the local dev server session.
- Confirmed through browser inspection that the Alla Vostra page defaults to UX Product Flow, and that UI Foundations must be activated before scripts inspect the Visual Hierarchy DOM.
- Used Playwright with the system Chrome executable to inspect the rendered UI Foundations tab, capture screenshots, and measure visual hierarchy geometry after

the cache-clearing and responsive-spacing passes.

- Preserved the current local-only working rhythm for the documentation pass. No production deployment or Hostinger publication was initiated while creating this worklog.

Work Completed - On-Scrolling Secondary Fade Treatment

- Extended the protected fading-composition treatment to the On-Scrolling Secondary stack so Step 4 can use the same masked-image concept as the Tertiary mosaic stack.
- Added Step 4-specific cream background and image mask gradients in ProductFlowSwitcher rather than forcing the exact Step 5 fade settings onto a differently shaped image.
- Tuned the top fade through multiple user-directed passes so the white nav bar now fades in more sharply than the first attempt while still showing a visible vertical transition.
- Tuned the bottom fade so the lower image opacity reaches full strength before the sticky cart button/orange control region, leaving the bottom of the image in the accepted state the user called out.
- Kept full image opacity across the intended middle band, stretching from below the white nav bar to the top edge of the orange bar at the bottom.
- Preserved transparent, no-device-frame small-stack presentation while adding the fade, so the On-Scrolling Secondary image remains a focused crop instead of returning to a framed phone screenshot.

Work Completed - Brace, Header, and Stack Alignment

- Added Step 4 and Step 5 to the compact Visual Hierarchy focal-stack variable set already used by the accepted Pre-Scrolling Secondary, Tertiary, and Quaternary stacks.
- Matched the On-Scrolling Secondary and Tertiary focal brace stroke weights to the Pre-Scrolling braces: a thicker light outline and inner white line without altering the established brace contour.
- Made both On-Scrolling focal braces slightly taller by increasing their brace height and top reach rather than drawing new paths or changing line shape.
- Restored the On-Scrolling Secondary brace to the taller version after a later user correction, while leaving thickness and contour untouched.
- Split Step 4 and Step 5 extra brace stacks so the Secondary stack can use the full-height focal brace path while Tertiary keeps the 90-percent brace path and path offset that match its mosaic treatment.
- Nudged the Tertiary Focal Point text and brace upward after the user requested that the Tertiary annotation pair sit higher.
- Moved the On-Scrolling Secondary Focal Point header and brace down by a total of 15 visual pixels after the user clarified that it should be vertically centered against the Secondary image.
- Reset Step 4 and Step 5 h4 horizontal transforms so the Secondary and Tertiary

headers line up with the image centers rather than with the wider annotation lanes.

- Adjusted Step 4 and Step 5 top offsets so the Secondary and Tertiary stacks are distributed between the top and bottom edges of the primary On-Scrolling device frame without clipping outside that primary-frame rhythm.
- Tightened Step 4 header/image spacing by lowering the h4 margin and then moving only the Secondary image up toward the Secondary header, leaving the Tertiary stack unchanged when the user asked for that isolation.

Work Completed - Callout Pruning and Main Content Centering

- Added a Step 4-specific line-callout set so On-Scrolling Secondary can keep MAIN CONTENT and SHOPPING CART while dropping NAV BAR.
- Reduced the Step 5 line-callout set to MAIN CONTENT only, removing the unwanted NAV

BAR and SHOPPING CART callout pairs from the On-Scrolling Tertiary stack.

- Updated ProductFlowSwitcher callout selection logic so Step 4, Step 5, clipped focal steps, photo-only steps, and primary steps each receive the intended line-callout set instead of sharing stale data.
- Moved the On-Scrolling Tertiary MAIN CONTENT line and green header to top: 50%, placing that callout pair at the exact vertical center of the Tertiary image.
- Verified that Step 3 still retains NAV BAR, MAIN CONTENT, and SHOPPING CART callouts; Step 4 retains MAIN CONTENT and SHOPPING CART; and Step 5 shows only MAIN CONTENT.
- Preserved the green rotated eyebrow style and white-line visual language while removing only the exact pairs requested by the user.

Work Completed - Responsive One-Column Spacing

- Added responsive-only centering rules for the Visual Hierarchy one-column and portrait modes so Step 4 and Step 5 images stay centered under the On-Scrolling primary frame.
- Protected the left focal annotation lane in narrow views by placing the Step 4 and Step 5 brace and Focal Point text inside the available side space instead of leaving the label vulnerable to clipping off the viewport.
- Preserved image centering while adding side-lane breathing room, avoiding the earlier failure mode where fixing the label could pull the image off center.
- Checked the tight 320px layout visually and numerically after the user warned not to create awkward spaces. The result keeps the focal text/brace compact on the left, the image centered, and the right-side callouts inside the viewport.
- Measured 980px, 900px, 720px, 390px, 340px, and 320px widths with Playwright. Step 4 and Step 5 image centers remained 0px off from the primary frame center at each tested width.
- Confirmed no horizontal overflow at the inspected narrow widths: document scrollWidth matched the viewport width at 320px, 340px, 390px, 720px, 900px, and 980px.
- Captured and reviewed /tmp/alla-vostra-on-scrolling-320-space-check.png and /tmp/alla-vostra-on-scrolling-390-space-check.png to make sure the protected space read as compact rather than gappy.

Work Completed - Commit and Documentation Context

- Recommended the user-requested commit message in one header followed by hyphen-prefixed lines after the source work, covering Step 4 fade treatment, on-scrolling gradient tuning, Secondary/Tertiary focal brace and label alignment, redundant callout removal, tertiary main-content centering, responsive one-column spacing, and the refreshed snapshot.

- Reviewed the resulting source commit 9162c6b, Refined Alla Vostra visual hierarchy scrolling states, and used its diff and rendered checks as the source of truth for this worklog.

- Confirmed that 9162c6b modified app/globals.css, app/projects/alla-vostra/ProductFlowSwitcher.tsx, and portfolio_PROJECT_SNAPSHOT.txt with 199 insertions and 23 deletions in the committed source state.
- Re-ran ./read_project.sh for this September 8 documentation pass so portfolio_PROJECT_SNAPSHOT.txt records the latest source tree, public asset inventory, PDF inventory, ignored generated/cache policy, package scripts, validation context, and git state.
- Re-extracted and reviewed all existing Portfolio worklog PDFs with pdftotext before composing this September 8 PDF, keeping the September 7 worklog as the main structure and tone reference.
- Checked pdftinfo and pdffonts for the latest mature PDF artifacts and preserved letter-size page geometry, PDF 1.4 output, Helvetica Type 1 text, Codex metadata,

and root-level naming.

- Restored next-env.d.ts to its dev-server route-type import after the static-export validation temporarily rewrote it to the production .next/types route import, leaving the final live diff scoped to documentation artifacts.

Validation Summary

- TZ=America/New_York date verified the documentation date as Tuesday, September 8, 2026 EDT.
- npm run check passed during the source pass and again during this worklog-generation pass, confirming TypeScript succeeded with tsc --noEmit.
- npm run build:static passed locally during the worklog-generation pass, with Next.js 16.2.10 compiling successfully, running TypeScript, and prerendering /, /articles, /projects/alla-vostra, and /projects/cinerific as static routes.
- curl -I http://127.0.0.1:3000/projects/alla-vostra returned HTTP 200 OK while the local dev server was running on port 3000.
- lsof confirmed a Node process listening on 127.0.0.1:3000, and screen -ls showed the detached portfolio-dev session used for local preview.
- Playwright opened /projects/alla-vostra, switched to UI Foundations, waited for the Visual Hierarchy group, and measured the On-Scrolling Primary, Secondary, and Tertiary layout in responsive and portrait-style widths.
- Playwright measurements confirmed Step 4 and Step 5 image center deltas of 0px relative to the Step 3 primary frame at 980px, 900px, 720px, 390px, 340px, and 320px viewport widths.
- Playwright measurements confirmed document scrollWidth equaled the viewport width at those tested sizes, indicating the responsive side-lane protection did not introduce horizontal overflow.
- Screenshot review at 320px and 390px confirmed the focal label/brace lane was visible, the small images remained centered, and the right-side green callouts stayed inside the viewport without awkward horizontal voids.
- Browser inspection confirmed the UI Foundations tab must be active before Visual Hierarchy DOM measurement, matching the follow-up context from the September 7 worklog.
- git status --short --branch confirmed main tracking origin/main at 9162c6b before this PDF was generated, with only portfolio_PROJECT_SNAPSHOT.txt modified after the snapshot refresh.
- git show --stat and git show --name-status confirmed the September 8 source commit scope and file list used in this record.

- pdftinfo and pdffonts checks against recent worklogs confirmed the PDF formatting and metadata target for this generated artifact.

Files Touched and Artifacts

- app/projects/alla-vostra/ProductFlowSwitcher.tsx: added Step 4-specific callout data, reduced Step 5 callouts to MAIN CONTENT, added Step 4 fade background and mask constants, split Step 4 and Step 5 brace stacks, expanded fading-composition selection to Step 4, and routed each Visual Hierarchy step to the correct brace and line-callout configuration.
- app/globals.css: tuned On-Scrolling Secondary and Tertiary stack positioning, header spacing, focal-brace thickness and height, focal label placement, Step 4 image/header proximity, Step 5 vertical callout alignment support, and responsive one-column centering/side-lane protection for narrow and portrait layouts.
- portfolio_PROJECT_SNAPSHOT.txt: refreshed by read_project.sh to document the current project tree, git state, worklog inventory, generated/cache ignore policy, public asset inventory, package scripts, and documentation pass.
- portfolio_worklog_september8.pdf: generated as the new root-level PDF worklog artifact for this September 8 Portfolio session.

- Local .next and .next.stale-* directories: handled as development-cache/runtime artifacts during the visual hierarchy iteration and cache-clearing requests; these are intentionally excluded from the snapshot and not treated as source changes.
- next-env.d.ts: temporarily changed by the static export validation and restored to the dev-server route import before this worklog was generated, leaving no intended final source delta in that file.

Follow-Up Context

- The latest committed source state before this PDF was generated is 9162c6b10b7c9929e3126c193ec7bb00894b9ae2 on main and origin/main, titled Refined Alla Vostra visual hierarchy scrolling states.
- The source commit contains the September 8 Alla Vostra Visual Hierarchy fade, brace, callout, alignment, and responsive one-column changes described in this PDF.
- The local changes after this documentation pass should be portfolio_PROJECT_SNAPSHOT.txt and portfolio_worklog_september8.pdf only. Generated .next and out output remain local build/dev artifacts and are not intended source changes.
- Future Visual Hierarchy browser checks should open /projects/alla-vostra, activate UI Foundations, and then inspect .flow-capture-group-visual-hierarchy; otherwise scripts will land in UX Product Flow content and miss the target DOM.
- Future On-Scrolling Secondary fade changes should preserve the accepted bottom treatment and tune the top white-nav transition carefully between the too-soft and too-hard states already rejected by the user.
- Future Step 4/Step 5 focal brace changes should preserve the accepted stroke thickness and contour. Height and vertical placement can be tuned through CSS or existing path selection without redrawing the brace shape.
- Future On-Scrolling callout work should remember that Step 4 intentionally omits NAV BAR but keeps MAIN CONTENT and SHOPPING CART, while Step 5 intentionally shows only MAIN CONTENT centered at 50%.
- Future responsive work should keep Step 4 and Step 5 image center deltas at 0px relative to the Step 3 primary frame while preserving side-lane visibility at 320px and avoiding large empty horizontal bands.
- No deployment or Hostinger synchronization was performed during this PDF-generation pass. Future commit, push, deployment, publish, or Hostinger synchronization should

wait for a direct user request and should still ask for the desired commit message first.

Output Artifact

- Generated: /Users/prahlin/gh/portfolio/portfolio_worklog_september8.pdf
- Companion sync file: /Users/prahlin/gh/portfolio/portfolio_PROJECT_SNAPSHOT.txt
- Source state reviewed: 9162c6b10b7c9929e3126c193ec7bb00894b9ae2 on main and origin/main.
- Naming follows the existing root-level Portfolio convention: portfolio_worklog_september8.pdf. No Part suffix was used because no earlier September 8 Portfolio worklog PDF existed.
- The document records the September 8 Alla Vostra Visual Hierarchy Step 4 fade treatment, top and bottom gradient tuning, Secondary/Tertiary brace matching and alignment, targeted callout removal, Tertiary MAIN CONTENT centering, Secondary header/image tightening, local cache clearing, responsive one-column spacing protection, TypeScript validation, static-export validation, route checks, Playwright measurement, refreshed snapshot, and documentation work in the established Prahlin Portfolio worklog format.
