

Prahl Portfolio Work Log - July 15, 2026 (Part 2)

Compiled summary for Wednesday, July 15, 2026 - Part 2 - focus: creating the dedicated Alla Vostra case-study page, expanding the Portfolio screenshot system with Android Small and Android Large capture sets, refining screenshot aspect-ratio and corner-radius rules, adding interactive standalone screenshot previews, capturing native payment-input screens from Alla Vostra AVDs, removing unwanted preview behavior from landing-page and device-frame screenshots, and linking the landing-page Alla Vostra surfaces directly to the new project page.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers only Prahl/portfolio work performed for July 15 Part 2: commit fd69e1e8df3409763b5c11dd1bb5ddf96bce9a3c, the associated local AVD screenshot-capture workflow used to produce the payment-input assets, the local validation checks, and this worklog-generation step. Alla Vostra application code was only temporarily instrumented for screenshot capture and was restored to a clean state before this record.

Source Materials Reviewed

- Reviewed all pre-existing Portfolio project worklogs at the repository root: portfolio_worklog_july11.pdf, portfolio_worklog_july14.pdf, and portfolio_worklog_july15_part1.pdf.
- Extracted text from the three Portfolio worklog PDFs with pdftotext to preserve the established title cadence, compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation language, files-touched list, follow-up context, and output-artifact close.
- Reviewed portfolio_PROJECT_SNAPSHOT.txt as the active same-project source snapshot created during July 15 Part 1, including its instruction header, file tree, Portfolio notes, and source-file dumps.
- Reviewed the current Portfolio Git history and confirmed the Part 2 implementation scope in commit fd69e1e, authored and committed on Wednesday, July 15, 2026 at 21:11:17 -0400.
- Reviewed git show --stat and git show --name-only for fd69e1e to confirm the committed source scope: app/ProjectCarouselButton.tsx, app/ScreenshotPreviewLayer.tsx, app/globals.css, app/layout.tsx, app/page.tsx, app/projects/alla-vostra/page.tsx, and twenty newly tracked screenshot assets in public/images.
- Reviewed the active Portfolio source after the commit to confirm the final section labels and page behavior: Payment includes Payment and Payment Input; Confirmation includes Order Confirmation and Order Placed; landing-page device and card links route to /projects/alla-vostra.
- Reviewed the current branch and remote state, confirming main and origin/main both resolve to fd69e1e8df3409763b5c11dd1bb5ddf96bce9a3c before this PDF artifact was generated.

Baseline Status Before July 15 Part 2 Work

- The July 15 Part 1 Portfolio site already had a green/black Martin Prahl landing page, Cinerific tablet preview, Alla Vostra phone preview, Credit King phone mockup, rotating green project CTA, hardened mobile top navigation, proof stats, case-study cards, worklog section, contact section, and Hostinger static-export workflow.
- Alla Vostra still existed only as a high-value landing-page proof point and lower case-study card. It did not yet have a dedicated case-study page with implementation depth, structured scope, architecture, testing, release, and product-flow narrative.
- The landing-page CTA and case-study card could identify Alla Vostra, but the Portfolio did not yet give visitors a full project detail surface after they clicked through.

- The available Alla Vostra screenshots were not yet comprehensively represented in Portfolio. Only the earlier startup, products, and confirmed small captures were already present from July 11 work.
- Screenshot treatment still needed a global convention. Device frames and standalone captures required aspect-ratio-sensitive sizing, reduced corner rounding, and a consistent distinction between device-framed screenshots and standalone screenshot previews.
- The user preference remained active: keep work local until commit/push is explicitly requested, preserve the existing visual language, and avoid unrelated redesign or code removal.

Goals for July 15 Part 2

- Create a dedicated Alla Vostra case-study route at /projects/alla-vostra.
- Make the page feel like a serious full-stack mobile commerce case study rather than a generic screenshot gallery.
- Use the exact known project facts: Alla Vostra, flagship full-stack mobile commerce app, React Native, Expo, Expo Router, Node.js, Next.js, Tailwind CSS, Stripe, Postmark, Vercel serverless routes, Android device testing, EAS builds, Play Store preparation, and 328 commits.
- Preserve the existing dark green/black Portfolio visual language, sharp layout, premium mobile-product feel, and landing-page consistency.
- Build the requested content structure: Hero, Overview, Scope and Ownership, Core Features, Product Flow, Technical Architecture, Engineering Decisions, Testing and Release Readiness, Build Timeline, Stack, Build Proof, and Closing CTA.
- Import the remaining Alla Vostra screenshots from the local Android Small and Android Large screenshot folders into public/images using _small and _large suffixes for Portfolio assets.
- Capture missing payment-input card-entry screenshots from the Alla Vostra Android Small and Android Large AVDs and save them both to the original screenshot folders and the Portfolio public image folder.
- Ensure device frames reflect screenshot aspect ratios without clipping, except for rounded corners.
- Globalize screenshot and device-frame corner radius conventions across the Portfolio.
- Allow standalone screenshot previews to enlarge at 1.5x on hover or tap-hold, but prevent overlay previews from screenshots inside device frames and from landing-page screenshots.
- Make the landing-page Alla Vostra device frame and the lower Alla Vostra case-study card navigate directly to /projects/alla-vostra.

Work Completed - Dedicated Alla Vostra Case Study Page

- Added app/projects/alla-vostra/page.tsx as a new static Next.js route for the Alla Vostra case study.
- Created project metadata for the page with the title Alla Vostra | Full-Stack Mobile Commerce Case Study and a description covering React Native, Expo, Stripe, Postmark, Node.js serverless routes, Android QA, EAS builds, and Play Store preparation.
- Built the hero section with Alla Vostra, the subtitle Flagship full-stack mobile commerce app, the requested concise paragraph, compact metadata pills, GitHub and Contact CTAs, and a multi-device screenshot showcase.
- Added Overview copy explaining the full-stack mobile ordering experience and the user role across mobile UI, architecture, backend-connected purchase flows, transactional messaging, emulator/device QA, and release-focused iteration.
- Added Scope and Ownership cards for Mobile Frontend, Backend / Server Logic, Payments, Messaging, and QA and Release.

- Added Core Features cards for product browsing, checkout experience, payment confirmation state, transactional email support, mobile-first responsiveness, and release pipeline awareness.
- Added Technical Architecture content showing the React Native / Expo app, serverless backend routes, Stripe, Postmark, and Android QA / EAS builds.
- Added Engineering Decisions cards for payment flow coordination, cross-device Android QA, and end-to-end purchase clarity.
- Added Testing and Release Readiness with the requested copy and checklist covering Android Small/Standard/Large emulator QA, EAS build preparation, payment flow verification, post-purchase confirmation coverage, and Play Store preparation.
- Added Build Timeline, Stack, Build Proof, and Closing CTA sections while avoiding fake revenue, user, download, or conversion metrics.

Work Completed - Product Flow and Screenshot Asset Expansion

- Copied Android Small and Android Large Alla Vostra screenshots into public/images with Portfolio suffixes for shop preview, address, time/date, contact, payment, empty cart, filled cart, and related checkout states.
- Added missing large counterparts for products_overlay_large.png and confirmed_overlay_large.png so Product Flow could pair Small and Large captures where available.
- Added payment_confirmation_overlay_small.png and payment_confirmation_overlay_large.png for the order-review moment before final placement.
- Booted Alla Vostra Android Small and Android Large AVDs on explicit Alla Vostra emulator serials and captured native Stripe card-entry/payment-input screens.
- Saved payment_input.png into /Users/prahlin/screenshots/alla_vostra/Android_Small and /Users/prahlin/screenshots/alla_vostra/Android_Large.
- Saved payment_input_small.png and payment_input_large.png into the Portfolio public image folder alongside the other project screenshots.
- Structured Product Flow around Launch, Browse, Cart, Details, Payment, and Confirmation.
- Added paired Small/Large screenshot stacks for Shop Preview, Products, Empty Cart, Filled Cart, Address, Time and Date, Contact, Payment, Payment Input, Order Confirmation, and Order Placed.
- Moved the former Payment Confirmation screenshot stack into the Confirmation stage and renamed it Order Confirmation.
- Renamed the post-purchase success stack to Order Placed and placed it after Order Confirmation so the final sequence reads as review first, placed second.
- Added concise captions for each screenshot state so the section reads as a product-flow narrative rather than a raw image dump.

Work Completed - Device Frames, Aspect Ratios, and Corner Radii

- Refined the Alla Vostra hero device frames so each device frame follows the screencapture aspect ratio instead of clipping the screenshot content.
- Reduced device-frame corner rounding across multiple user-directed passes, including an additional reduction for Android Small short/standard screenshots.
- Centralized screenshot and device-frame radius values in global CSS variables: capture frame and screen radii for tall and standard screenshots.
- Applied those radius variables to hero device frames, homepage phone/tablet screenshots, case-card miniatures, Alla Vostra Product Flow frames, and regular standalone screenshots.
- Preserved the Android screenshot content while allowing only the intended rounded-corner masking at the frame edges.

- Kept the treatment consistent with the existing dark green/black Portfolio visual system and avoided broader landing-page redesign.

Work Completed - Screenshot Preview Behavior

- Added app/ScreenshotPreviewLayer.tsx as a client-side overlay layer mounted from app/layout.tsx.
- Implemented 1.5x screenshot previews for images marked with data-screenshot-preview.
- Supported hover previews for mouse users and tap-hold previews for touch users, hiding the preview immediately on pointer exit, release, cancellation, scroll, resize, or blur.
- Matched the preview popover corner radii to the frame or screenshot container being previewed so the enlarged image respects the same corner system as its source.
- Kept the preview mechanism scoped to explicit data-screenshot-preview images instead of every image in the Portfolio.
- Removed data-screenshot-preview from screenshots inside device frames, including the Alla Vostra hero device stack and homepage device frames.
- Removed landing-page screenshot preview triggers entirely, including the lower case-card miniature images, after the user requested no overlay/popups from screenshots on the main landing page.
- Preserved preview behavior for standalone Alla Vostra Product Flow screenshots on the dedicated project page.

Work Completed - Landing Page Navigation and CTA Routing

- Updated app/ProjectCarouselButton.tsx so the Alla Vostra carousel state links to /projects/alla-vostra instead of the old landing-page anchor.
- Extended the homepage PhonePreview component so the Alla Vostra hero device frame can render as an accessible anchor when a project href is provided.
- Made the top hero Alla Vostra device frame navigate instantly to /projects/alla-vostra when tapped or clicked anywhere inside the dedicated device frame.
- Added an href field to the case-study data model and assigned /projects/alla-vostra to the Alla Vostra card only.
- Factored the lower case-study card rendering into CaseStudyCard so linked and non-linked cards can share the same content structure.
- Rendered the lower Alla Vostra card as a full-card anchor with aria-label, while leaving Cinerific and Credit King as non-linked articles for now.
- Added .phone-shell-link and .case-card-link styles for pointer behavior, inherited color, no underline, hover lift on the card, and focus-visible outlines for keyboard users.

Work Completed - Local AVD and Screenshot Capture Handling

- Started the local Portfolio dev server at http://127.0.0.1:3000 for preview and validation.
- Started Alla Vostra Metro only as needed for capture work and stopped that temporary session afterward.
- Avoided touching the concurrently running Cinerific AVD after the user explicitly warned not to target it.
- Pinned ADB commands to Alla Vostra emulator serials rather than running broad commands against all attached devices.
- Used a temporary query-gated Alla Vostra route/state hook only to render the payment-input screen for screenshot capture.
- Removed the temporary Alla Vostra app-source hook after captures and confirmed the Alla Vostra repository returned to a clean state.

- Captured the Android Small payment input image at 720x1280 and the Android Large payment input image at 1440x3120.
- Shut down the Alla Vostra Large AVD after the capture workflow completed so no unnecessary emulator session remained running.

Validation and Checks Performed

- Ran npm run check after the page, screenshot, preview, radius, and navigation changes; TypeScript completed successfully.
- Ran npm run build:static after the major implementation pass; Next.js static generation completed successfully for / and /projects/alla-vostra.
- Verified local HTTP 200 responses from http://127.0.0.1:3000/ and http://127.0.0.1:3000/projects/alla-vostra.
- Verified local HTTP 200 responses for /images/payment_input_small.png and /images/payment_input_large.png.
- Checked rendered homepage HTML to confirm the Alla Vostra hero phone and lower case-study card both link to /projects/alla-vostra.
- Searched app/page.tsx to confirm no landing-page images retain data-screenshot-preview after the user requested no landing-page popup behavior.
- Searched the project page to confirm Product Flow standalone screenshots still retain data-screenshot-preview where preview behavior is intended.
- Confirmed the Alla Vostra repository had no remaining source diff after the temporary screenshot-capture hook was removed.
- Confirmed Portfolio main and origin/main both resolve to fd69e1e after the Part 2 commit.
- Confirmed the Portfolio working tree was clean before generating this PDF artifact.

Files Touched During July 15 Part 2 Portfolio Work

- app/ProjectCarouselButton.tsx - changed Alla Vostra carousel destination to the dedicated case-study route.
- app/ScreenshotPreviewLayer.tsx - new client-side screenshot preview layer for explicit standalone screenshot previews.
- app/globals.css - added and revised case-study page styling, device-frame styles, screenshot radius variables, Product Flow layouts, preview overlay styles, clickable card/device styles, and responsive behavior.
- app/layout.tsx - mounted the screenshot preview layer globally.
- app/page.tsx - added project href data, full-card Alla Vostra link behavior, clickable Alla Vostra hero device behavior, and removed landing-page screenshot preview triggers.
- app/projects/alla-vostra/page.tsx - new dedicated Alla Vostra case-study page with full-stack narrative and Product Flow screenshot system.
- public/images/address_overlay_large.png
- public/images/address_overlay_small.png
- public/images/confirmed_overlay_large.png
- public/images/contact_overlay_large.png
- public/images/contact_overlay_small.png
- public/images/empty_cart_overlay_large.png
- public/images/empty_cart_overlay_small.png
- public/images/filled_cart_overlay_large.png
- public/images/filled_cart_overlay_small.png
- public/images/payment_confirmation_overlay_large.png
- public/images/payment_confirmation_overlay_small.png

- public/images/payment_input_large.png
- public/images/payment_input_small.png
- public/images/payment_overlay_large.png
- public/images/payment_overlay_small.png
- public/images/products_overlay_large.png
- public/images/shop_preview_large.png
- public/images/shop_preview_small.png
- public/images/time_date_overlay_large.png
- public/images/time_date_overlay_small.png
- portfolio_worklog_july15_part2.pdf - new July 15 Part 2 Portfolio worklog artifact generated at the repository root.

Follow-Up Context

- Dedicated project pages for Cinerific and Credit King remain natural next steps so all three featured landing-page projects can eventually have equivalent case-study depth.
- If the screenshot library grows again, keep using the established _small and _large Portfolio filename convention for imported Android screenshots.
- If new screenshots are added to Product Flow, classify them as standard or tall so frame aspect ratios and radius variables stay consistent.
- Keep landing-page screenshot previews disabled unless the user explicitly asks to restore them.
- Continue preserving the distinction between device-framed screenshots, which do not open preview overlays, and standalone Product Flow screenshots, which may open previews.
- Regenerate portfolio_PROJECT_SNAPSHOT.txt with ./read_project.sh when the project snapshot should reflect the new Alla Vostra route and assets.
- Continue asking for Portfolio commit messages before committing or pushing unless the user explicitly instructs otherwise.

Output Artifact

- Generated file: portfolio_worklog_july15_part2.pdf.
- Location: /Users/prahlin/gh/portfolio/portfolio_worklog_july15_part2.pdf.
- Naming follows the existing root-level Portfolio convention and the part-number convention established by portfolio_worklog_july15_part1.pdf.
- This PDF is the second Portfolio worklog for July 15 and documents the dedicated Alla Vostra case-study implementation pass.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this artifact.
