

Prahlín Portfolio Work Log - July 19, 2026

Compiled summary for Sunday, July 19, 2026 - focus: polishing the Portfolio landing page identity, restoring Prahlín as the visible brand, rewriting the hero eyebrow and release promise, reordering the stack chips, revising proof stats, rebuilding the Play/App/service proof panel, tightening the hero and GitHub buttons, adding project-specific platform icons to the green carousel CTA, validating the live local preview, confirming the Hostinger static-export pipeline, and generating the daily Portfolio PDF worklog.

Generated in continuity with the established Prahlín Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers only Prahlín/portfolio work performed for July 19, 2026: the refreshed project snapshot, review of every pre-existing Portfolio worklog PDF, the landing-page polish represented by commit `bb80b0d094867c7bb628e2c23a72183d5f956d03`, the successful Hostinger static-export workflow for that commit, local validation checks, and this worklog-generation step. Alla Vostra, Cinerific, and Credit King application code was not changed for this record.

Source Materials Reviewed

- Ran `./read_project.sh` from `/Users/prahlin/gh/portfolio` and regenerated `portfolio_PROJECT_SNAPSHOT.txt` before writing this worklog, preserving the project convention that Codex reads the current source snapshot before continuing Portfolio work.
- Reviewed the refreshed `portfolio_PROJECT_SNAPSHOT.txt`, including project notes, source tree, line-numbered app source dumps, `root/tooling/deployment` config, public asset inventory, PDF worklog inventory, git context, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF: `portfolio_worklog_july11.pdf`, `portfolio_worklog_july14.pdf`, `portfolio_worklog_july15_part1.pdf`, `portfolio_worklog_july15_part2.pdf`, and `portfolio_worklog_july16.pdf`.
- Extracted text from all five prior Portfolio PDFs with `pdftotext` to preserve the same title cadence, opening summary density, section order, bullet-heavy technical voice, validation language, files-touched list, follow-up context, and output-artifact close.
- Checked PDF metadata and page counts with `pdftinfo`. The mature Portfolio worklogs use letter-size pages, root-level filenames, compact five-to-six page bodies, and the Codex standard-library PDF-generator metadata used by the July 14, July 15, and July 16 artifacts.
- Reviewed current Git history and confirmed the July 19 implementation scope through `git log`, `git show --stat`, `git show --name-status`, and targeted diffs for `app/page.tsx`, `app/globals.css`, `app/ProjectCarouselButton.tsx`, `app/projects/alla-vostra/page.tsx`, `next-env.d.ts`, and `portfolio_PROJECT_SNAPSHOT.txt`.
- Reviewed the committed July 19 source state at `bb80b0d`, whose subject/body captured the user-approved past-tense bullet list: updated branding, refined hero copy, reordered categories, updated stats, reworked card columns, tuned CTA spacing/animation, added platform icons, matched icons to projects, adjusted stroke weights, and polished typography/contrast.

- Checked local preview responses from <http://127.0.0.1:3000/> and <http://127.0.0.1:3000/projects/alla-vostra>, including the current Prahlin brand, updated hero copy, Restaurant App carousel state, and platform-icon class output.
- Checked GitHub Actions run history with `gh run list` and confirmed the Build static export for Hostinger workflow completed successfully for the July 19 bb80b0d push.

Baseline Status Before July 19 Work

- The July 16 Portfolio site already had a green/black landing page, a dedicated `/projects/alla-vostra` case-study route, an expandable Alla Vostra Product Flow screenshot system, mobile-friendly screenshot previews, a Cinerific tablet proof surface, and the GitHub-backed Hostinger static-export deployment path.
- The visible top-left brand still read Martin Prahlin in the landing-page header and on the Alla Vostra case-study page, even though the user wanted the portfolio brand globally restored to Prahlin.
- The hero eyebrow still used the earlier positioning line rather than the requested multi-line proof phrase with separate underlined and boxed terms.
- The hero stack chips still reflected the earlier React Native / Next.js / Tailwind CSS / Node.js / Kotlin presentation instead of the requested RN, JavaScript, TypeScript, Expo, Node, Kotlin, Next, and Compose order.
- The proof-stat strip still used the July 15 wording around 3yrs, project worklogs, and official store releases rather than the final July 19 wording of 3y+ Full-Stack Expertise, 6+ shipped products, and 5+ Play/App Store releases.
- The proof panel still behaved like a compact two-row implementation card and did not yet have the requested three-column Play/App, Vercel/Supabase, Stripe/Postmark layout with equivalent icon treatment.
- The green hero carousel CTA still centered on quoted app/project names and did not yet display project-category labels with platform icons.
- The CTA spacing, GitHub button width, animation direction, text stroke, project-name styling, icon sizing, and platform-specific icon sets all needed direct live-preview tuning because the user was iterating visually against <http://127.0.0.1:3000/>.

Goals for July 19

- Globalize the top-left visible brand from Martin Prahlin back to Prahlin on every current Portfolio page, including the landing page and the Alla Vostra case-study page.
- Replace the hero eyebrow with the final three-line message: Appealing UI/UX, User-Friendly Front-End, and Deep, Dependable Back-end, using underlines on the left terms and hairline boxes on the right terms.
- Preserve the large React Native Full-Stack Mobile Developer hero header while replacing the supporting paragraph with the final cross-platform concept to real-world production and release message.
- Reorder and revise the hero stack chips to React Native, JavaScript, TypeScript, Expo, Node, Kotlin, Next, and Compose.
- Update the proof-stat strip to broader portfolio proof: 3y+ Full-Stack Expertise, 1k+ Quality GitHub Commits, 6+ Shipped Mob/Web Products, and 5+ Play/App Store Releases.
- Rebuild the proof panel as three columns without changing its overall card role: Play Store / App Store, Vercel / Supabase, and Stripe / Postmark.
- Tighten the green carousel button and the GitHub button so their text/icon spacing reads intentionally at the same visual rhythm.
- Replace Cinerific / Alla Vostra / Credit King CTA labels with Streaming App,

Restaurant App, and Finance App while keeping the underlying links pointed at the matching project surfaces.

- Add custom inline platform icons to the green carousel CTA and render only the icons that belong with each project: Restaurant App with Android, Apple, and Web; Streaming App with Android; Finance App with Android and Apple.
- Keep missing platform icons collapsed left with no reserved blank placeholders.

Work Completed - Brand, Hero Copy, and Stack Presentation

- Updated the landing-page nav brand link in `app/page.tsx` so the visible text reads Prahlin and the accessible label reads Prahlin home.
- Updated the Alla Vostra case-study page header in `app/projects/alla-vostra/page.tsx` with the same Prahlin visible brand and Prahlin home accessible label, making the current page set consistent.
- Replaced the hero eyebrow copy with the final stylized three-line phrase using explicit spans for underlined left-hand terms, boxed right-hand terms, punctuation spacing, and manual line breaks.
- Added dedicated `.hero-eyebrow`, `.hero-eyebrow-box`, `.hero-eyebrow-underline`, and `.hero-eyebrow-period` rules in `app/globals.css` so the eyebrow keeps its compact visual hierarchy without shrinking the main hero type.
- Tuned the underline and box treatment down to hairline weight so the decorative emphasis reads as a fine typographic system rather than a heavy callout.
- Updated the hero supporting line to frame the offer as Cross-Platform Concept to Real-World Production & Release, 100% Stress-Free, matching the final user-directed language from the live editing session.
- Replaced the older stack chips with the final ordered set: React Native, JavaScript, TypeScript, Expo, Node, Kotlin, Next, and Compose.
- Preserved the existing hero headline, dark green/black identity, profile/device composition, and landing-page section structure while concentrating this pass on copy, hierarchy, and proof-surface polish.

Work Completed - Proof Stats and Services Card

- Rewrote the first proof stat from the July 15 3yrs language to 3y+ Full-Stack Expertise.
- Kept the GitHub proof column at 1k+ Quality GitHub Commits, preserving the broader output signal established in earlier worklogs.
- Changed the third proof stat to 6+ Shipped Mob/Web Products after the user narrowed the wording from longer mobile/web product phrasing.
- Changed the fourth proof stat to 5+ Play/App Store Releases, keeping the store-release proof but removing the older Official wording.
- Reworked the proof panel from a two-row implementation note into a three-column card using `.proof-column` and `.proof-item` structure.
- Placed Play Store and App Store in the first column with Store and Apple icons.
- Placed Vercel and Supabase in the middle column with Triangle and Database icons after the user exchanged the second Vercel item for Supabase and requested a better-matching icon.
- Placed Stripe and Postmark in the right column with CreditCard and MailCheck icons after the user asked for a more email-related Postmark symbol.
- Matched the right and center columns to the left column horizontally so the proof card reads as three equivalent service/tool columns within the pre-existing card.
- Increased the proof card width to support the three-column treatment while leaving the card in the same hero-copy proof position.

Work Completed - Hero CTA, GitHub Button, and Motion

- Refactored `app/ProjectCarouselButton.tsx` so the green CTA label now separates the fixed View action from the rotating project/category segment.
- Replaced the earlier quoted project names with category labels: Restaurant App, Streaming App, and Finance App.
- Kept the Restaurant App state linked to `/projects/alla-vostra`, the Streaming App state linked to the Cinerific landing-page anchor, and the Finance App state linked to the Credit King landing-page anchor.
- Removed the single apostrophes from the green button after the user reversed the earlier quoted-name treatment.
- Styled View as plain black text without stroke, then styled the rotating project segment with `#f3fff7` text and a black stroke for high-contrast impact inside the green button.
- Iterated the project-name stroke thickness through several live-preview passes until the final 4.2px text stroke gave the label enough visual weight without swallowing the letterforms.
- Adjusted the carousel button min-width, inner window width, padding, gap, and space-between behavior so View nudges left, the right arrow nudges right, and project text has stable room during rotation.
- Reversed the horizontal direction of the bumpy slide-in animation by flipping project-swoosh `translateX` values while preserving the existing overshoot/compress/settle motion character.
- Added `.github-button` styling so the GitHub button mirrors the green CTA rhythm more closely, with the GitHub text and Braces icon spaced as a compact right-hand button.
- Reduced button padding and width pressure across the hero actions while keeping the existing button components and visual language intact.

Work Completed - Platform Icons in the Project Carousel

- Added a typed Platform union and per-project platform arrays in `app/ProjectCarouselButton.tsx` so icons are data-driven by each carousel item rather than hardcoded for every state.
- Added a custom `AndroidMark` SVG that renders only the Android-style robot head, antennas, and eyes, sized in `em` units so it scales with the button text line.
- Added a custom `AppleMark` SVG shaped as an apple/leaf-style platform glyph, using the same color system as the Android mark while keeping it inline and code-native.
- Added a custom `WebMark` SVG globe with an outer shell and inner longitude/latitude lines, visually matching the simple web icon reference provided during the session.
- Tuned platform icon size to 1.6em after several live-preview passes that doubled, reduced, and vertically centered the marks against the text and arrow.
- Matched the Android-to-Apple and Apple-to-Web horizontal gaps, including a small negative left margin on the Web icon after the user asked for equal icon spacing.
- Nudged the Web icon slightly down so the globe visually centers against the stroked project text and adjacent marks.
- Tuned icon stroke weights separately: shared platform strokes at 3px, Apple at 4px, Web inner lines at 2px, and Web outer shell at 4px after the user asked to thicken only the globe's outer shape.
- Rendered Restaurant App with Android, Apple, and Web icons; Streaming App with only Android; and Finance App with Android and Apple.
- Confirmed that missing icons collapse left automatically because the JSX maps only the active platform list and does not reserve hidden placeholder slots.

Work Completed - Live Preview, Commit, and Deployment Path

- Kept the local development target at `http://127.0.0.1:3000` so the user could inspect landing-page changes in real time.
- Moved stale generated `.next` cache aside and restarted the local Next dev server when Turbopack served old CSS despite source edits, then rechecked the served CSS chunk for the carousel and icon rules.
- Used curl against the live local page to confirm the updated Prahlin brand, hero release phrase, Restaurant App carousel state, and platform icon class output were present in served HTML.
- Used curl against `/projects/alla-vostra` to confirm the project page also served the Prahlin brand after the globalized header change.
- Committed and pushed the July 19 landing-page polish as `bb80b0d` on main, with main and origin/main resolving to the same commit afterward.
- Confirmed the GitHub Actions Build static export for Hostinger workflow completed successfully for the `bb80b0d` push.
- Refreshed `portfolio_PROJECT_SNAPSHOT.txt` again at the start of this worklog request so the current source and git context were represented before the PDF was generated.

Validation and Checks Performed

- Ran `npm run check` after the final project-specific icon mapping change; TypeScript completed successfully.
- Ran `npm run check` again during worklog preparation; TypeScript completed successfully with the current workspace state.
- Ran `npm run build:static` during worklog preparation; Next.js 16.2.10 compiled successfully, ran TypeScript, collected page data, and prerendered `/` and `/projects/alla-vostra` as static output.
- Checked `http://127.0.0.1:3000/` with curl and confirmed the live page output includes Prahlin, From Cross-Platform Concept, 100% Stress-Free, Restaurant App, carousel-button-android, carousel-button-apple, and carousel-button-web.
- Checked `http://127.0.0.1:3000/projects/alla-vostra` with curl and confirmed the page output includes Prahlin and Alla Vostra content.
- Checked the served CSS chunk after the latest icon-stroke pass and confirmed the shared platform icon stroke, Apple stroke, Web shell stroke, and Web line stroke values were being served from the live dev server.
- Confirmed `git rev-parse HEAD` and `git rev-parse origin/main` both return `bb80b0d094867c7bb628e2c23a72183d5f956d03`.
- Confirmed `gh run list` reports the July 19 Build static export for Hostinger workflow as completed successfully for the Updated portfolio branding to Prahlin push.
- Confirmed the only local tracked modification before this PDF was generated was the refreshed `portfolio_PROJECT_SNAPSHOT.txt` produced by `./read_project.sh`.

Files Touched During July 19 Portfolio Work

- `app/page.tsx` - restored Prahlin brand text, revised hero eyebrow markup, updated hero lede, reordered stack chips, revised proof stats, added new lucide imports, rebuilt the proof panel into three columns, updated Play/App/Vercel/Supabase/Stripe/Postmark labels and icons, and added the GitHub button class.
- `app/globals.css` - added hero eyebrow styling, expanded carousel-button and project-text styling, reversed project-swoosh animation direction, added platform icon styling, tuned GitHub button spacing, and rebuilt proof-panel column/item layout.

- app/ProjectCarouselButton.tsx - replaced quoted project-name carousel labels with Restaurant App, Streaming App, and Finance App; added typed platform data; added custom Android, Apple, and Web SVG marks; rendered only the active project's icons; and started the carousel on Restaurant App.
- app/projects/alla-vostra/page.tsx - changed the project-page header brand from Martin Prahlin to Prahlin and updated its accessible label.
- next-env.d.ts - refreshed/generated by the current Next.js tooling state during the July 19 work.
- portfolio_PROJECT_SNAPSHOT.txt - regenerated by ./read_project.sh and updated with current source, inventory, and git context.
- portfolio_worklog_july19.pdf - this new July 19 Portfolio worklog artifact generated at the repository root.

Follow-Up Context

- Commit portfolio_worklog_july19.pdf and the refreshed portfolio_PROJECT_SNAPSHOT.txt only after the user provides or confirms the desired commit message, preserving the Portfolio project's commit-message convention.
- If Cinerific and Credit King receive dedicated project pages later, update the Streaming App and Finance App carousel hrefs from landing-page anchors to their dedicated routes.
- Recheck the green carousel CTA after any future project-label wording changes, because its width and spacing are intentionally tuned around Restaurant App, Streaming App, and Finance App.
- If official platform-brand assets are ever required, replace the current code-native glyphs with appropriately licensed assets; the current marks are lightweight inline SVG indicators built for the Portfolio UI.
- Keep the missing-icon collapse behavior in the carousel if more platform combinations are added later, so Android-only or Android/iOS-only projects do not leave awkward visual gaps.
- Re-run ./read_project.sh after committing this PDF if the snapshot should include the new PDF file in its inventory.
- Continue avoiding broad refactors of the landing page while the user is visually tuning the hero; the July 19 work stayed intentionally focused on copy, spacing, iconography, and current page branding.

Output Artifact

- Generated file: portfolio_worklog_july19.pdf.
- Location: /Users/prahlin/gh/portfolio/portfolio_worklog_july19.pdf.
- Naming follows the existing root-level Portfolio convention: portfolio_worklog_july19.pdf. No part suffix was used because this is the first July 19 Portfolio worklog artifact.
- Uses the same daily worklog structure and compact technical voice established by portfolio_worklog_july11.pdf, portfolio_worklog_july14.pdf, portfolio_worklog_july15_part1.pdf, portfolio_worklog_july15_part2.pdf, and portfolio_worklog_july16.pdf.
- Generated with a small standard-library PDF writer; no external PDF dependency was installed for this artifact.
