

Prahl Portfolio Work Log - September 28, 2026

Compiled summary for Monday, September 28, 2026 - focus: continuing the Prah.dev Portfolio after the September 27 Cinerific UI Foundations documentation state, verifying the United States Eastern date, running the customary project reader, extracting and studying all forty-two pre-existing Portfolio PDF worklogs, booting and preserving a local-only Next.js preview, connecting the landing Cinerific device preview to its case study, wiring the Cinerific Figma button to the supplied prototype, standardizing destination CTAs to open in new tabs, moving the About Dev workflow and belief material onto the landing page, rebuilding the former Worklog block as a detailed My Workspace presentation, iterating workstation, QA-device, software, icon, typography, spacing, and responsive behavior, curating an initially exhaustive tool inventory into a focused professional list, refining the shared Core Beliefs language across the landing and About Dev pages, adding a My Work Tools heading aligned with the Software row, validating the completed routes and responsive geometry, documenting committed source state 29240dc, refreshing the Portfolio project snapshot, and generating the September 28 Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after portfolio_worklog_september27.pdf and after the September 27 documentation state. The source state reviewed for this record is 29240dcfa75f83ef704d1cb5db11532092288625 on main, matching origin/main, titled Expanded the landing page workspace and portfolio navigation. That commit contains 444 insertions and 30 deletions across seven tracked files. No Hostinger deploy-branch work, static production publish, or public deployment was performed during this record. The local documentation delta created after the source commit is the refreshed portfolio_PROJECT_SNAPSHOT.txt file and this September 28 root-level PDF worklog.

Source Materials Reviewed

- Verified the United States Eastern date twice. The external UTC-04:00 time check reported September 28, 2026 at approximately 10:47 PM, and TZ=America/New_York date reported Monday, September 28, 2026 at 10:49 PM EDT with UTC offset -0400. The worklog therefore uses September 28 rather than relying on a UTC calendar date.
- Ran ./read_project.sh from /Users/prahlin/gh/portfolio and regenerated portfolio_PROJECT_SNAPSHOT.txt before composing this record, preserving the project convention that current source, assets, configuration, worklog inventory, Git context, and workflow instructions are refreshed for documentation.
- Extracted and studied all forty-two pre-existing root-level Portfolio PDF worklogs with pdftotext: fifteen July records, fifteen August records, and twelve September records through portfolio_worklog_september27.pdf. The series contained 246 PDF pages and approximately 115,514 extracted words before this artifact.
- Compared every record for filename cadence, same-day Part suffix behavior, title construction, opening-summary density, baseline and goal framing, bullet-heavy technical voice, validation wording, files-touched treatment, follow-up continuity, footer structure, and output-artifact closure.
- Used the September 27 record as the closest chronological baseline, September 21 for workflow-copy history, September 15 for About Dev and Core Beliefs history, and the July landing-navigation records for the earlier device and CTA interaction context.
- Checked pdfinfo and pdf fonts across the complete series. The mature convention remains US Letter at 612 x 792 points, PDF 1.4, Helvetica and Helvetica-Bold Type 1 fonts, no encryption, Codex metadata, and a repeated dated page footer.
- Reviewed commit 29240dc through git show, git log, git status, git diff, git rev-parse, and branch tracking. Confirmed main and origin/main resolve to the same commit after the source work was committed.
- Reviewed app/page.tsx, app/aboutdev/page.tsx, app/ProjectCarouselButton.tsx, app/projects/alla-vostra/page.tsx, app/projects/cinerific/page.tsx, app/globals.css, and the refreshed project snapshot as the files carrying or documenting the September 28 work.

Baseline Status Before September 28 Work

- The September 27 state had completed the Cinerific UI Foundations showcase and left the landing page with its earlier Worklog block: three numbered implementation-summary rows rather than a description of the physical and software workspace.
- The landing Cinerific tablet was visual-only and did not open the Cinerific case study, while the landing project-carousel CTA did not yet follow the requested new-tab behavior.
- The Cinerific project hero still pointed its Figma button at the general figma.com homepage instead of the supplied Cinerific prototype URL.

- About Dev already contained the methodology timeline and five-card Core Beliefs formation, but those sections were not present on the landing page and still used the older How I Got Here, My Work Methodology, and Principles labels.
- The user's workstation hardware, physical Android and iOS QA inventory, development applications, AI tools, design tools, testing tools, and workflow platforms were not represented on the landing page.
- The shared belief statements were substantially longer and the Inter-connectedness title had not yet been revised to Inter-connectivity.
- The work was explicitly constrained to local development. The requested result was a locally running site with no deployment or public publish.

Goals for September 28

- Make the landing Cinerific device preview behave like the Alla Vostra preview and open the correct Cinerific case study.
- Connect the Cinerific hero Figma CTA to the supplied prototype and ensure destination CTAs across landing and project heroes open in a new window or tab without replacing the portfolio.
- Copy the About Dev workflow and belief sections onto the landing page between the workspace area and contact panel, preserve their shared content, and adopt the requested names and ordering.
- Transform the landing Worklog area into a structured My Workspace presentation covering the primary workstation, physical QA devices, and a curated software toolset.
- Reuse the existing Lucide stack icons, tune their scale and spacing consistently, preserve white headers and muted item names, and keep nested content legible on desktop and mobile.
- Iterate the five belief statements across both pages until the landing and About Dev copies are synchronized exactly.
- Validate TypeScript, local routes, responsive rendering, and source state; refresh the project snapshot; and document the committed implementation in the established PDF format.

Work Completed - Navigation and CTA Behavior

- Converted the landing Cinerific tablet preview from a decorative div into an accessible link to /projects/cinerific, added the Cinerific app preview alt text and aria-label, and preserved the existing tablet shell, capture frame, hover scaling, and focus-visible treatment.
- Updated the Cinerific hero Figma button from the general Figma homepage to the supplied Cinerific prototype at node 0:1 while retaining target=_blank and noreferrer behavior.
- Updated the landing ProjectCarouselButton destination CTA to use target=_blank and rel=noreferrer so project destinations open without replacing the landing page.
- Updated the Contact Dev mailto buttons on both Alla Vostra and Cinerific project pages to open through the same new-window behavior. Existing GitHub, LinkedIn, resume, Figma, and store destinations already followed that pattern.
- Kept the in-page carousel arrow as a same-page interaction and kept the Cinerific device-frame link as direct internal case-study navigation rather than treating every control as an external destination.
- Added tablet-link cursor and keyboard-focus styling and included the linked tablet in the same accepted hover transform as the existing device shells.

Work Completed - Landing Workflow and Core Beliefs

- Copied the About Dev methodology timeline and My Core Beliefs formation onto the landing page between My Workspace and the contact section, then placed Core Beliefs before the workflow timeline as requested.
- Renamed My Work Methodology to My Workflow, How I Got Here to The Way I Work, and Principles to The Values I Represent on both the landing and About Dev pages so the shared sections use one vocabulary.
- Preserved the four evidence-based workflow stages: Industry & Product Research, Project Planning, Scaffolding the Workflow, and Learning-As-I-Go, including inline emphasis, multi-paragraph planning copy, evidence labels, and timeline indices.
- Kept the five-card circular belief system and synchronized its content across both pages. The final titles are Vision, Modernness, Inter-connectivity, User-friendliness, and Cohesion.
- Finalized Vision as No imagination means no prototype. No prototype means no build.; Modernness as When creating a unique product, absolutely nothing should be off the table.; and Inter-connectivity as Just like art is science and science is art, design & code should be one.

- Finalized User-friendliness as As Einstein said, 'If you can't explain it simply, you don't really know it.' and Cohesion as Let's be real; a product is never stronger than its weakest point.

Work Completed - My Workspace Devices

- Replaced the former Worklog eyebrow and documented-build-history title with HOW I'M SET UP and My Workspace, then converted the three numbered worklog strings into structured data with icons, green category eyebrows, white headers, and muted item lists.
- Created the WORKSTATION category with Laptop and External Monitor headers, listing the Macbook Air 15.2-inch M4 16GB SSD and CMV 14-inch monitor as separate muted rows.
- Created the QA DEVICES category and divided it by Android and iOS. Android lists Samsung Galaxy A3 Small, Samsung Galaxy S21 FE Standard, Samsung Galaxy S20 Ultra Large, and Galaxy Tab A Standard across Smartphone and Tablet groups.
- Added iPhone 14 Standard, iPhone 12 Pro Max Large, and iPad Air 14 Standard under the iOS Smartphone and Tablet groups, maintaining the platform-to-device-type indentation system.
- Iterated the green eyebrow labels through the requested Main, QA, Primary, Secondary, workstation, and quality-assurance naming passes before settling on the concise WORKSTATION and QA DEVICES labels recommended during the final content audit.
- Ensured every physical device and software application occupies its own visible row, removed dangling commas after the final audit, and retained gray item text beneath brighter white category headers.

Work Completed - My Work Tools and Software Curation

- Created the SOFTWARE category and initially incorporated the user's complete forty-item inventory, including development applications, AI assistants, creative tools, simulators, command-line utilities, frameworks, languages, build tools, and React Native dependencies.
- Reviewed the resulting section at desktop and phone widths. The exhaustive version reached approximately 3,038 pixels on desktop and 3,493 pixels on mobile, duplicated the preceding Built around React Native stack section, and read more like an inventory than a curated landing-page narrative.
- Removed the duplicated Technologies block and low-signal or dependency-level entries from My Workspace, including Nano, Terminal, Homebrew, npm, npx, Gradle, Metro, ESLint, Expo Font, React Native SVG, React Native Gesture Handler, React Native Reanimated, and React Navigation.
- Consolidated Software into Development Environments, AI-Assisted Development, Design & Motion, Testing & Debugging, and Workflow Platforms. The retained tools are VS Code, Android Studio, Xcode, PyCharm, Codex, Claude, ChatGPT, GitHub Copilot, Figma, Photoshop, Illustrator, After Effects, Media Encoder, Expo Go, Android Emulator / AVD, iOS Simulator, ADB, Postman, GitHub, Jira, and ServiceNow.
- Kept Xcode and Android Studio under Development Environments while placing iOS Simulator and Android Emulator / AVD under Testing & Debugging, separating full IDE responsibilities from their platform-specific test targets.
- Added a left-column HOW I WORK eyebrow and My Work Tools heading aligned with the SOFTWARE eyebrow on desktop. Measured the final heading alignment against the Software label to within a fraction of a pixel and moved the heading into normal flow before Software on stacked tablet and mobile layouts.

Work Completed - Icons, Typography, and Responsive Layout

- Reused the existing open-source Lucide MonitorSmartphone, Smartphone, and Braces icons from the Built around React Native section for WORKSTATION, QA DEVICES, and SOFTWARE rather than generating or downloading custom artwork.
- Matched the workspace icons to the original Stack-section dimensions and spacing, then increased both three-icon sets by exactly 25 percent from 24 x 24 pixels to 30 x 30 pixels while retaining the 30px icon-to-label gap.
- Set the first white header beneath each workspace eyebrow to the 24px scale used by Secondary mobile, kept all Software headers at that same size, and retained 21px nested QA device-type headers with 16px gray device and application names.
- Introduced a two-column timeline grid with explicit row and column placement, a 48px desktop content gap, aligned green eyebrows, 16px eyebrow-to-content spacing, and nowrap handling for deliberate eyebrow lines.

- Reduced the narrow-screen grid to a 50px icon/eyebrow column with a 24px gap, reduced device-list indentation to 16px, and reduced QA subgroup indentation to 24px. This reclaimed horizontal room for long Samsung and software names without changing desktop alignment.
- Captured element-level desktop and mobile screenshots during review, reduced the section by more than 1,000 pixels on desktop and 1,200 pixels on mobile from the exhaustive inventory state, and confirmed the final section does not introduce horizontal overflow at the 390px phone width.
- Cleared stale Turbopack .next output repeatedly by moving each generated cache to a recoverable temporary path, restarted the local Next.js server at <http://127.0.0.1:3000>, and verified that each final CSS rule was present in the served bundle.

Validation Summary

- npm run check passed repeatedly throughout the JSX, data, navigation, copy, and responsive CSS iterations with tsc --noEmit; it passed again during this documentation pass.
- Confirmed the local landing route, /aboutdev, and /projects/cinerific each returned HTTP 200 from the running Next.js 16.2.10 Turbopack server.
- Browser automation used the locally installed Google Chrome to capture exact My Workspace section screenshots at 1440px and 390px widths, inspect rendered CSS, verify content presence, and measure My Work Tools alignment against the SOFTWARE eyebrow.
- Confirmed the final My Work Tools title and SOFTWARE eyebrow differ by less than one pixel at the 1440px desktop reference width, while the HOW I WORK eyebrow remains explicitly locked to the #43FF92 site green.
- Confirmed all forty supplied inventory items were present during the exhaustive review pass before the agreed curation removed the duplicated framework/dependency block and low-signal utilities.
- Confirmed commit 29240dc contains 444 insertions and 30 deletions across app/ProjectCarouselButton.tsx, app/aboutdev/page.tsx, app/globals.css, app/page.tsx, the two project pages, and the snapshot included in the commit.
- Confirmed main and origin/main match at 29240dc. After the customary project-reader pass, the refreshed portfolio_PROJECT_SNAPSHOT.txt is the only tracked pre-PDF documentation delta.
- The snapshot generator carries trailing whitespace in generated source excerpts, so git diff --check reports snapshot-only whitespace warnings. Application source and TypeScript validation remain clean.
- No static export, GitHub Actions dispatch, Hostinger synchronization, deploy-branch update, or production publish was performed. The site remained local-only as requested.

Files Touched and Artifacts

- app/page.tsx - linked the Cinerific tablet, rebuilt My Workspace, added workstation, QA, and software content, added My Work Tools, copied the shared beliefs and workflow sections, and carried the final belief copy.
- app/globals.css - added linked-tablet states, expanded workspace hierarchy and responsive rules, aligned My Work Tools, increased shared icon dimensions, and preserved narrow-screen readability.
- app/aboutdev/page.tsx - synchronized section labels, workflow naming, belief title changes, and all five final belief statements with the landing page.
- app/ProjectCarouselButton.tsx - made the active project destination CTA open in a new tab with norereferrer protection.
- app/projects/cinerific/page.tsx - connected the hero Figma CTA to the supplied prototype and updated Contact Dev new-tab behavior.
- app/projects/alla-vostra/page.tsx - updated Contact Dev to use the same new-tab behavior.
- portfolio_PROJECT_SNAPSHOT.txt - refreshed through ./read_project.sh so the documentation companion records committed source state 29240dc, current assets, worklog inventory, and Git context.
- portfolio_worklog_september28.pdf - generated as this new root-level dated Portfolio documentation artifact.

Follow-Up Context

- My Workspace is intentionally curated rather than exhaustive. Frameworks and low-level dependencies remain better suited to the Built around React Native section or individual case-study pages instead of returning as a second Technologies inventory.

- The WORKSTATION, QA DEVICES, and SOFTWARE icons intentionally reuse the same Lucide vocabulary as the Stack section and now share the 30px size. Future icon changes should be reviewed in both sections together.
- The My Work Tools heading is positioned against the Software row on wide layouts and restacks before Software below 980px. Future worklog-grid changes should preserve both behaviors and remeasure the desktop alignment.
- Physical QA devices and virtual testing tools remain deliberately separated: phones and tablets belong under QA DEVICES, while Expo Go, AVD, iOS Simulator, ADB, and Postman belong under Testing & Debugging.
- The landing and About Dev copies intentionally share the same four workflow stages and five belief statements. Future wording edits should update both data sets together unless the user explicitly requests page-specific divergence.
- The Cinerific tablet is an internal case-study link, while destination CTA buttons open new tabs. Preserve that distinction when adding new hero controls.
- As with prior Portfolio work, ask for the commit message before committing or pushing the refreshed snapshot or this PDF unless the user explicitly supplies the message and requests the operation.

Output Artifact

- Created /Users/prahlin/gh/portfolio/portfolio_worklog_september28.pdf.
- Used the established filename because this is the first Portfolio worklog for September 28, 2026; no Part suffix was needed.
- Produced a US Letter, PDF 1.4, unencrypted document using Helvetica and Helvetica-Bold with Codex title, subject, author, creator, and producer metadata.
- Preserved the established dense technical narrative, section ordering, repeated dated page footer, and end-of-document continuity notes used by the recent Portfolio worklog series.
- Source state reviewed: 29240dcfa75f83ef704d1cb5db11532092288625 on main and origin/main.
- No source commit, push, deployment, Hostinger synchronization, or production publish was performed as part of generating this PDF artifact.
