

Prahlín Portfolio Work Log - July 22, 2026

Compiled summary for Wednesday, July 22, 2026 - focus: public synchronization of the Portfolio main branch, extended landing-page hero CTA refinements, responsive arrow-to-case-study scrolling, proof-stack landscape behavior, social/icon sizing polish, portfolio-website case-study screenshot imports, refreshed source snapshot context, successful validation checks, review of all prior Portfolio PDF worklogs, and generation of the daily Portfolio PDF worklog.

Generated in continuity with the established Prahlín Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers only Prahlín/portfolio work performed for the July 22 local project session: the refreshed project snapshot, review of every pre-existing Portfolio worklog PDF, the landing-page and case-study work represented by commits 39deb19, c10561e, 9316bc7, and 504cf37, the confirmed origin/main public sync, Hostinger static-export workflow confirmation, local validation checks, and this worklog-generation step. Alla Vostra, Cinerific, and Credit King application repositories were not changed for this record.

Source Materials Reviewed

- Ran `./read_project.sh` from `/Users/prahlin/gh/portfolio` and regenerated `portfolio_PROJECT_SNAPSHOT.txt` before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio work.
- Reviewed the refreshed `portfolio_PROJECT_SNAPSHOT.txt`, including project notes, current source tree, app source dumps, root/tooling/deployment configuration, public image and PDF inventories, git context, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF: `portfolio_worklog_july11.pdf`, `portfolio_worklog_july14.pdf`, `portfolio_worklog_july15_part1.pdf`, `portfolio_worklog_july15_part2.pdf`, `portfolio_worklog_july16.pdf`, `portfolio_worklog_july19.pdf`, `portfolio_worklog_july20.pdf`, and `portfolio_worklog_july21.pdf`.
- Extracted text from the existing Portfolio PDFs with `pdftotext` to preserve the same title cadence, opening summary density, section order, bullet-heavy technical voice, validation language, files-touched list, follow-up context, and output-artifact close.
- Checked mature PDF metadata with `pdfinfo`. The July 20 and July 21 artifacts use root-level filenames, letter-size pages, compact five-to-six page bodies, and Codex standard-library PDF-generator metadata.
- Reviewed current Git history and confirmed the July 22 implementation scope through `git log`, `git show --stat`, `git show --name-status`, targeted source inspection, and the final HEAD/origin/main match at 504cf37.
- Reviewed the committed source states from 39deb19 through 504cf37, covering the separated green CTA controls, hero lede wording, responsive typography/stretch behavior, CTA device-frame polishing, social-button sizing, portfolio case-study additions, proof-card landscape behavior, screenshot pairing, and case-study row scroll targeting.
- Checked GitHub Actions run history with `gh run list` and confirmed the Build static export for Hostinger workflow completed successfully for the latest pushed Portfolio commit.

Baseline Status Before July 22 Work

- The July 21 Portfolio landing page already had the restored Prahlín brand, RN / Kotlin headline, justified hero lede, green project carousel CTA, three social buttons, responsive chip grid, proof stack, project-card stack, and Hostinger deployment workflow.

- The green CTA was visually close but still used one combined clickable treatment before the July 22 split-button pass. The user wanted the project-name/platform-icon area and the arrow action separated while preserving the established overlap relationship.
- The hero lede copy and eyebrow stack had already been taught to scale with the control stacks, but the July 22 session required wording changes and confirmation that Concept and All-In-One lines continued stretching horizontally with chip, social, and green-button stack widths.
- The platform-device frames inside the CTA still needed careful visual treatment around their inner edges without touching the approved Android and iOS SVG icon shapes, sizes, or fills.
- The Portfolio project itself did not yet have its own case-study card in the landing stack, and the user wanted editor screenshots imported into the same public image system used by the other case-study cards.
- The proof stack still needed a dedicated wide landscape behavior: six icon/name pairs in one row, evenly spaced, with the containing card stretching toward the right edge of the profile image rather than conforming to the narrower CTA/social/chip stacks.
- The arrow button still needed a final interaction pass so it would scroll to the active project case-study row instead of behaving like the generic Case Studies navigation link.

Goals for July 22

- Separate the green carousel CTA into a project-name/platform-icons button and a dedicated arrow button, while preserving the requested overlap, gap, and joined-corner geometry.
- Keep the project-name button narrow enough to create appropriate horizontal space, make the arrow button portrait-shaped instead of square, and remove rounding from the adjoining corners between the two green controls.
- Increase top-card text assets and selected CTA/social text or icon internals by the requested one-pixel or ten-percent increments without disrupting the established responsive stack proportions.
- Update the hero lede copy to the current Concept > Prototype > Build > Shipment and All-In-One, 100% Hassle-Free wording while keeping the stretch/justification behavior tied to the surrounding stacks.
- Preserve the approved Android and iOS artwork while improving only the visual edge underlay around device-frame interiors.
- Import user-provided editor screenshots into public/images and create a final Portfolio case-study card that documents the website itself with relevant technologies.
- Make the proof stack snap to a six-column row early enough for landscape desktop/laptop layouts, then stretch the proof card to meet the right edge of the profile photo with even internal spacing.
- Change the CTA arrow action so it scrolls to the exact active project card row, accounting for responsive card reordering across portrait, landscape, and intermediate view modes.

Work Completed - Split CTA Controls and Hero Copy

- Separated the original green CTA into two visible controls: a left project-name/platform-icons button and a right arrow button. The project-name/icon stack remained in the left control while the arrow moved into its own action surface.
- Tuned the overlap and spacing through several user-directed passes: first splitting the button, then letting the project-name control bleed horizontally into the arrow control, then reducing the overlap to roughly twenty percent and narrowing the arrow surface into portrait dimensions.
- Narrowed the project-name button enough to restore appropriate horizontal breathing room between controls, then removed corner rounding from the project-name button right side and the arrow button left side so the two pieces read as a joined system.

- Increased top-card text assets by one pixel where requested, including Prahlin, Case Studies, Stack, Worklog, Contact, and the P inside the green CTA treatment.
- Updated the lede from the vertically pasted Original Idea phrase into the requested concise progression: Concept > Prototype > Build > Shipment, removing the final chevron and Release word.
- Changed the second lede line from Stress-Free to Hassle-Free, preserving the All-In-One, 100% phrasing and the bold/stack relationship already established in prior sessions.
- Kept the eyebrow and lede behavior separate: the eyebrow scales with the surrounding horizontal control values, while the lede lines continue to stretch/justify with the chip, social, and green-button stacks.

Work Completed - CTA Icons, Arrow, and Device Frames

- Retuned the dedicated arrow button repeatedly after live visual review, including a centered placement pass, a rightward nudge, a midpoint correction, and a final microscopic left adjustment.
- Rotated the CTA arrow 90 degrees clockwise without changing the surrounding button spacing or the accepted vertical alignment, then cleared the development cache when the browser initially showed stale output.
- Preserved the approved Android and iOS icon SVG artwork after the user rejected direct icon-shape edits, and shifted the fix to the visual underlay behind each device frame.
- Added darker gray underlays behind the complete Android and iOS device-frame image areas, creating the requested outside-to-inside read: black device frame, dark gray interior support, project-color screen fill, then platform icon.
- Lightened project-specific CTA fills for Alla Vostra, Cinerific, and Credit King, then increased the web icon size in two ten-percent-plus passes while keeping the CTA composition intact.
- Increased all icon-related boxes inside the three social buttons by ten percent-plus and then increased the social button text names by one pixel, preserving their locked ratios and row alignment.

Work Completed - Portfolio Case Study Card and Screenshots

- Imported the user-provided local screenshot from the macOS screenshots folder and saved it into public/images using the established public image directory used by the landing case-study cards.
- Created a dedicated final case-study card titled This Portfolio Website, appearing last in the landing-page card stack and using the imported editor screenshot as its image.
- Added a Portfolio-specific description covering the personal full-stack developer portfolio built so far, including the landing hero system, case-study stack, responsive browser tuning, static export, and iterative visual polish.
- Added relevant technology tags for the Portfolio card: Next.js, React, TypeScript, Tailwind CSS, Motion, Lucide, and Sharp, matching the codebase tools and dependencies involved in the work.
- Imported a second user-provided screenshot from July 22 at 10:32:01 PM, converted it into public/images/portfolio-website-landscape-screenshot.png, and paired it with the existing portrait screenshot in the Portfolio case-study card.
- Adjusted the paired screenshot presentation through user-directed passes: first matching heights by scaling the landscape image without cropping, then scaling the portrait screenshot down to the landscape screenshot height, and finally swapping their positions so the landscape image appears first.
- Confirmed the new screenshot asset appears under public/images and kept the final thumbnail treatment free of vertical cropping or distorted dimensions.

Work Completed - Proof Stack and Responsive Scroll Targeting

- Changed the proof/Vercel stack so landscape desktop and laptop layouts reorder from a 3-column by 2-row grid into a 6-column by 1-row grid, then moved the breakpoint earlier after the first pass did not appear soon enough during window widening.
- Separated proof-card width behavior from the CTA, social, and chip stack widths after user clarification. The proof card now stretches independently in landscape instead of conforming to the narrower hero control stacks.
- Added runtime measurement that sets the landscape proof-card width from its own left edge to the right edge of the profile photo, allowing the card border to reach the requested visual boundary while keeping responsive left and right padding equal.
- Evenly distributed the six proof icon/name pairs inside the stretched proof card so the inner content responds to the wider container instead of clustering at one side.
- Changed CTA arrow actionability so the arrow button scrolls to the applicable case-study card row for the currently displayed project, while the left project-name button continues to serve as the project link.
- Implemented row-aware scroll targeting by reading rendered case-study card positions, grouping cards by their actual vertical row, and scrolling to the row that contains the active project card. This keeps the behavior correct when cards reorder across portrait, landscape, and intermediate aspect ratios.
- Kept the top nav Case Studies button behavior separate: it still scrolls to the generic case-study section, while the carousel arrow targets the precise project row.

Deployment and Public Push

- Confirmed the latest Portfolio implementation was already committed on main and synchronized with origin/main at 504cf37 after the approved push sequence.
- Ran git push origin main for the public website request. Git reported Everything up-to-date against <https://github.com/Prahlín/portfolio.git>, confirming the public branch already had the latest landing-page and case-study implementation.
- Checked GitHub Actions with gh run list after the public sync. The Build static export for Hostinger workflow completed successfully for Refined landing responsiveness and portfolio case study.
- Kept the newly generated worklog artifact local after creation because the established Portfolio convention requires a user-approved commit message before committing or pushing documentation artifacts.

Validation and Checks Performed

- Ran npm run check after the July 22 source changes and confirmed TypeScript validation passed with tsc --noEmit.
- Cleared the Next.js development cache during the session when stale browser output prevented updated arrow and lede behavior from appearing immediately at <http://127.0.0.1:3000/>.
- Used local browser preview feedback throughout the visual tuning sequence to validate CTA overlap, squared shared corners, arrow centering, responsive lede stretching, proof-card width, and case-study screenshot composition.
- Verified the public screenshot assets through local filesystem checks, including the addition of public/images/portfolio-website-landscape-screenshot.png alongside the existing portfolio/editor screenshot.
- Reviewed git status before and after the public push confirmation. main matched origin/main; the only later local change before PDF creation was the regenerated portfolio_PROJECT_SNAPSHOT.txt from ./read_project.sh.

- Confirmed the Hostinger deployment path indirectly through the successful GitHub Actions static-export workflow for commit 504cf37.
- Generated this PDF with the same standard-library PDF writer style used by the mature Portfolio worklogs and checked metadata/text extraction after writing.

Files Touched During July 22 Portfolio Work

- app/HeroLede.tsx - preserved the client-side stretch/justification behavior while supporting the updated Concept > Prototype > Build > Shipment and All-In-One, 100% Hassle-Free copy.
- app/ProjectCarouselButton.tsx - separated project-name and arrow controls, preserved platform icon artwork, added scroll-to-card-row behavior, and kept the left control responsible for project navigation.
- app/globals.css - tuned CTA overlap, button geometry, arrow rotation/nudging, text scaling, device-frame underlays, social icon/text sizing, proof-card landscape layout, and paired Portfolio screenshot presentation.
- app/page.tsx - added the This Portfolio Website case-study card, Portfolio description, technology tags, proof-card measurement wiring, and screenshot pairing.
- next.config.ts - retained the local development origin configuration used during preview work.
- public/images/editor-window-screenshot.png - user-provided editor-view screenshot used as the first Portfolio card image during the initial case-study addition.
- public/images/portfolio-website-landscape-screenshot.png - user-provided landscape screenshot imported and paired with the Portfolio case-study image set.
- portfolio_PROJECT_SNAPSHOT.txt - regenerated by ./read_project.sh before this worklog in keeping with the project snapshot convention.
- portfolio_worklog_july22.pdf - newly generated daily PDF worklog artifact for the July 22 Portfolio session.

Follow-Up Context

- The public website source is already represented by origin/main at 504cf37 and the Hostinger static-export workflow has succeeded for that commit.
- The July 22 worklog PDF and refreshed project snapshot remain local until the user provides or approves a commit message for documentation artifact changes.
- Future Portfolio visual work should preserve the distinction between the top nav Case Studies scroll and the carousel arrow row-targeted scroll behavior.
- The Android and iOS CTA icon SVG shapes, sizes, and fills should remain untouched unless the user explicitly reopens that artwork. Edge treatments should be handled through surrounding frame/underlay layers.
- The proof-card landscape width is intentionally independent from CTA/social/chip stack width and is tied to the profile-photo right edge; later spacing changes should keep that relationship in mind.
- LinkedIn and Dribbble URLs remain placeholders until final public profile destinations are supplied, and the Cinerific case-study route still carries layout-parity placeholder screenshot treatment for future project-specific media.
- All future Portfolio work remains local-only unless the user explicitly asks to commit, push, deploy, or publish.

Output Artifact

- Created portfolio_worklog_july22.pdf in the repository root using the established Portfolio PDF naming convention.

- The PDF records the July 22 Portfolio session, reviewed sources, public sync status, validation checks, source/image files touched, and carry-forward notes needed for the next Codex session.
