

Prahlín Portfolio Work Log - August 16, 2026

Compiled summary for Sunday, August 16, 2026 - focus: continuing the Prahl.dev Portfolio Alla Vostra project-page refinement after the August 14 Visual Hierarchy focus-blend pass, reviewing all prior Portfolio PDF worklogs, running the customary project reader, documenting the latest committed source state, rendering real Tutorial Small/Large screenshot stacks in UX Product Flow, rebalancing and relabeling the UX flow diagram, reorganizing the screenshot-flow sections around SHOP, Cart, Checkout, and Confirmation, tightening label behavior and rail typography, removing Visual Hierarchy Step 2, realigning the On-Scrolling and During Shopping row headers, swapping the On-Scrolling secondary focus image while preserving its secondary size, validating with TypeScript and browser checks, refreshing the Portfolio project snapshot, and generating the August 16 Portfolio PDF worklog.

Generated in continuity with the established Prahlín Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahlín/portfolio work performed after `portfolio_worklog_august14.pdf` and after the August 14 documentation state. The source commit reviewed for this record is `2edd9ed59afc417f0c111e6d282cee6f031716dd` on main, matching origin/main before this PDF was generated. That commit contains the Alla Vostra UX Product Flow, screenshot-flow, tutorial-asset, and UI Foundations Visual Hierarchy changes described here. No Hostinger production deployment command was run during this worklog-generation pass. The new local documentation artifacts produced for this record are the refreshed `portfolio_PROJECT_SNAPSHOT.txt` and this August 16 PDF worklog.

Source Materials Reviewed

- Ran `./read_project.sh` from `/Users/prahlin/gh/portfolio` and regenerated `portfolio_PROJECT_SNAPSHOT.txt` before writing this worklog, preserving the project convention that Codex refreshes the current source snapshot before continuing Portfolio documentation work.
- Reviewed the refreshed `portfolio_PROJECT_SNAPSHOT.txt`, including project notes, source tree, public image inventories, PDF worklog inventory, package and deployment configuration, current git context, recent commits, and the standing instruction to ask for a commit message before committing or pushing.
- Reviewed every pre-existing Portfolio root-level worklog PDF: `portfolio_worklog_july11.pdf`, `portfolio_worklog_july14.pdf`, `portfolio_worklog_july15_part1.pdf`, `portfolio_worklog_july15_part2.pdf`, `portfolio_worklog_july16.pdf`, `portfolio_worklog_july19.pdf`, `portfolio_worklog_july20.pdf`, `portfolio_worklog_july21.pdf`, `portfolio_worklog_july22.pdf`, `portfolio_worklog_july23.pdf`, `portfolio_worklog_july24.pdf`, `portfolio_worklog_july25.pdf`, `portfolio_worklog_july29.pdf`, `portfolio_worklog_july30.pdf`, `portfolio_worklog_july31.pdf`, `portfolio_worklog_august1_part1.pdf`, `portfolio_worklog_august1_part2.pdf`, `portfolio_worklog_august1_part3.pdf`, `portfolio_worklog_august3.pdf`, `portfolio_worklog_august4.pdf`, `portfolio_worklog_august5.pdf`, `portfolio_worklog_august6.pdf`, `portfolio_worklog_august10_part1.pdf`, `portfolio_worklog_august10_part2.pdf`, `portfolio_worklog_august11.pdf`, `portfolio_worklog_august12_part1.pdf`, `portfolio_worklog_august12_part2.pdf`, and `portfolio_worklog_august14.pdf`.
- Extracted text from all twenty-eight existing Portfolio PDFs with `pdftotext` and checked recent metadata with `pdfinfo` to preserve title cadence, one-day filename style,

opening-summary density, section order, bullet-heavy technical voice, validation language, files-touched lists, follow-up context, output-artifact close, root-level filename style, letter-size pages, PDF 1.4 output, Codex author/creator/producer metadata, and Helvetica base-font convention.

- Used `portfolio_worklog_august14.pdf` as the closest structural baseline because it documented the immediately preceding Alla Vostra Visual Hierarchy blend work, tutorial capture asset context, local cache-clearing pattern, browser-measurement workflow, and PDF-generation language.
- Reviewed git history and state through `git log`, `git show --stat`, `git show --name-status`, `git status`, `git diff --stat`, `git diff --name-only`, `pdftinfo`, `pdfinfo`, `pdftotext`, image metadata checks, npm validation, and local browser checks. HEAD and origin/main resolved to 2edd9ed before this PDF was generated.
- Reviewed `app/projects/alla-vostra/ProductFlowSwitcher.tsx`, `app/projects/alla-vostra/page.tsx`, `app/globals.css`, `portfolio_PROJECT_SNAPSHOT.txt`, `public/images/alla-vostra/tutorial/tutorial_screen_large_step_01.png` through `tutorial_screen_large_step_05.png`, package scripts, the local `/projects/alla-vostra` route, and the complete root-level Portfolio PDF inventory.

Baseline Status Before August 16 Work

- August 14 left the Alla Vostra UI Foundations Visual Hierarchy section with the Tutorial, Pre-Scrolling, On-Scrolling, and During Shopping rows already present, plus composed fade/protected-image treatments for several focus frames.
- The UX Product Flow side still needed a real Tutorial screenshot presentation. Its Tutorial stage had placeholder behavior rather than the same Android Small/Large device-frame stack treatment used by the other screenshot-flow subsections.
- The UX flow diagram still had older payment-section geometry, separate Payment and Checkout bands, extra checkout detail boxes, and connector paths that no longer matched the intended simplified purchase path.
- Browse nodes in the flow diagram were still arranged in a flatter one-row structure before the user requested a two-row zig-zag layout with horizontal overlap and a cleaner flow into SHOP.
- The screenshot-flow grouping still treated Shop Screen as part of Browse, kept Payment as its own section, and placed Contact after Address inside Checkout.
- Visual Hierarchy still included Step 2 and therefore retained row-header offset assumptions that became incorrect once that step was removed from the Visual Hierarchy sequence.

Goals for August 16

- Add Android Large Tutorial step screenshots to match the existing Small tutorial screenshots and render all five Tutorial steps as real Small/Large stacks inside UX Product Flow.
- Rework the UX Product Flow diagram without changing its overall height: remove awkward connector stubs, rebalance section heights, simplify checkout/payment flow, prevent node label wrapping, and trim unused horizontal real estate.
- Split Shop Screen into its own SHOP screenshot-flow section between Browse and Cart, then reorganize Cart and Checkout stacks to match the desired shopping path.

- Merge Payment screenshot content into Checkout and remove the standalone Payment screenshot section while keeping Confirmation as the final stage.
- Remove Visual Hierarchy Step 2 only from the UI Foundations Visual Hierarchy category, preserve all other UI Foundations Step 2 content, and realign the affected row headers.
- Reuse the On-Scrolling primary-focus screenshot for the secondary-focus card while preserving the smaller secondary-focus layout and size.
- Validate the work with npm run check and browser measurements/screenshots, keep the local dev server available at <http://127.0.0.1:3000>, refresh the project snapshot, and produce the August 16 PDF worklog.

Work Completed - Tutorial Screenshot Stacks

- Added five Android Large tutorial captures under public/images/alla-vostra/tutorial as tutorial_screen_large_step_01.png through tutorial_screen_large_step_05.png, each preserving the 1440 x 3120 Android Large capture dimensions.
- Added a tutorialStacks data structure in app/projects/alla-vostra/page.tsx so each Tutorial step now has a Small and Large screen entry with matching title, caption, aspect, label, and source fields.
- Passed tutorialStacks into ProductFlowSwitcher and replaced the UX Tutorial PlaceholderStage with ExpandableFlowStacks, matching the behavior, hierarchy, expansion labels, and staged screenshot presentation used by the rest of UX Product Flow.
- Kept the existing Android Small tutorial assets in place and paired them with the newly added Android Large assets rather than changing the established Small screenshot sources.
- Preserved the Tutorial stage as Stage 0 in the screenshot-flow section while changing it from placeholder copy into the actual five-step visual walkthrough.

Work Completed - UX Flow Diagram Rebuild

- Removed the awkward top-edge connector protrusions from Products, About Us, and Contact in the Browse section, keeping the connectors visually attached to intended centers and edges instead of dangling from node tops.
- Rebuilt Browse as a two-row zig-zag: Home and About Us on the upper row, Products and Contact on the lower row, with horizontal overlap between zones so the Browse area reads as a staggered flow rather than a flat strip.
- Renamed and corrected node language through the user-directed sequence, leaving the upper shopping node as SHOP and the Cart-row selection node as Shop while preserving Tutorial -> Shop -> Cart inside the Cart band.
- Merged the Payment and Checkout vertical diagram sections into a single CHECKOUT band, removed Details Input and Confirmation Prompt, renamed Payment Method to Payment, centered Payment, and carried the final node forward as Order Confirmed per the requested label state.
- Equalized all six vertical section rails across the existing 1648px coordinate-frame height, preserving the diagram height while distributing Tutorial, Browse, Shop, Cart, CHECKOUT, and Confirmation evenly.
- Trimmed the coordinate frame width and horizontal guide lines so the green section rails sit at the left edge of real diagram content and the right side no longer carries unused blank

space.

- Added center-based node positioning, nowrap node labels, max-content minimum width behavior, and Confirmation-specific rail letter-spacing so long labels stay readable without line wrapping or unwanted typography shrinkage.

Work Completed - UX Screenshot Flow Reorganization

- Split Shop Screen out of the Browse screenshot group and created a dedicated SHOP group between Browse and Cart, preserving the original Shop Screen Small/Large screenshots, captions, device-frame treatment, and screenshot scale.
- Added Products Overlay as the first Cart stack using the existing `products_overlay_piccola_small.png` and `products_overlay_piccola_large.png` assets, placing product selection before Empty Cart Overlay and Filled Cart Overlay.
- Moved Contact Input Overlay before Address Input Overlay inside Checkout, matching the requested Contact -> Address order without changing the underlying screenshot assets.
- Moved Payment Method Overlay and Payment Input Prompt into Checkout, after Time and Date Overlay, so the checkout sequence now contains Contact, Address, Time and Date, Payment Method, and Payment Input in one continuous section.
- Removed the standalone Payment screenshot group after its two stacks were merged into Checkout, leaving the high-level UX screenshot-flow order as Tutorial, Browse, SHOP, Cart, Checkout, and Confirmation.
- Verified the expanded live screenshot-flow group readback in the browser so Cart started with Products Overlay and Checkout contained both payment stacks while no separate Payment section remained.

Work Completed - UI Foundations Visual Hierarchy Updates

- Removed Step 2 only from the Visual Hierarchy step list, leaving Step 2 entries in Colors & Theming, Typography & Spacing, Iconography & Imagery, Navigations, and Controls & Inputs untouched.
- Rebuilt the Visual Hierarchy focus-title mapping from row arrays so PRIMARY FOCUS, SECONDARY FOCUS, TERTIARY FOCUS, and QUATERNARY FOCUS labels remain consistent after Step 2 was removed.
- Realigned the ON-SCROLLING and DURING SHOPPING row headers after the Step 2 removal changed stack ordering and vertical layout. The final header positions sit above their first row stacks in the same rhythm as the earlier sections.
- Reused the ON-SCROLLING primary focus screenshot source for the secondary-focus Step 4 card while preserving Step 4 secondary-focus size, frame dimensions, and layout behavior.
- Left the later user request to remove the On-Scrolling secondary-focus device frame and add a transparency/cream gradient unimplemented in this record because the turn was interrupted and the user redirected to worklog generation before source edits were made.

Work Completed - Local Server, Cache Handling, and Documentation Pass

- Kept the local Next.js development server available at `http://127.0.0.1:3000` for visual checks and restarted it when needed after style or cache state disagreed with the source

files.

- Cleared stale Turbopack/Next output by moving .next aside when the browser served an older CSS bundle that did not include the Confirmation rail kerning override, then restarted the dev server and confirmed the new rule was present live.
- Used Playwright to switch between UI Foundations and UX Product Flow, inspect DOM text order, measure rail heights, read computed letter-spacing, capture focused screenshots, and verify that source edits matched rendered output.
- Recommended a commit message in the requested one-header plus hyphen-point format, after which the source work was committed as 2edd9ed, Refined Alla Vostra UX flow and UI hierarchy.
- Ran ./read_project.sh again for this August 16 worklog-generation pass, updating portfolio_PROJECT_SNAPSHOT.txt to the current project tree, git context, PDF inventory, source state, and local documentation status.

Validation Summary

- npm run check passed repeatedly during the August 16 source pass and again during this PDF-generation pass, confirming TypeScript succeeded with tsc --noEmit.
- Playwright readbacks confirmed the UX flow diagram labels rendered in the intended order, including SHOP, Tutorial, Shop, Cart, Contact, Address, Date & Time, Payment, and Order Confirmed.
- Browser screenshots verified the restored Cart Tutorial path, the two-row Browse zig-zag, the equalized green section rails, the centered Payment node, and the simplified final Confirmation path.
- Browser metrics confirmed all six flow-diagram rails rendered at the same height after the equal vertical redistribution, on both desktop and mobile-width checks.
- Computed-style checks confirmed other flow-diagram rail labels kept the shared 0.15em spacing while Confirmation used the tighter 0.12em spacing after clearing the stale dev cache.
- Screenshot-flow DOM readbacks confirmed the group order as Tutorial, Browse, SHOP, Cart, Checkout, and Confirmation, with Products Overlay first in Cart and Payment Method / Payment Input housed inside Checkout.
- Visual Hierarchy browser readbacks confirmed Step 2 no longer rendered in that category, while ON-SCROLLING and DURING SHOPPING header offsets matched the post-removal stack positions.
- Live DOM inspection confirmed the On-Scrolling secondary-focus image source matched the primary-focus source while retaining the smaller secondary-focus rendered dimensions.
- No production deployment, Hostinger synchronization, or GitHub Actions deployment trigger was performed as part of this record.

Files Touched and Artifacts

- app/projects/alla-vostra/ProductFlowSwitcher.tsx: added tutorialStacks input support, rebuilt UX flow diagram geometry and labels, removed Visual Hierarchy Step 2, regenerated focus labels, swapped the On-Scrolling secondary-focus image source, and updated rendering

logic for the Tutorial screenshot stacks.

- app/projects/alla-vostra/page.tsx: added Tutorial stack data, created the SHOP screenshot-flow group, added Products Overlay to Cart, moved Contact before Address, folded Payment Method and Payment Input into Checkout, removed the standalone Payment group, and passed tutorialStacks into ProductFlowSwitcher.
- app/globals.css: added center-left node positioning support, nowrap/no-wrap node label behavior, equalized label/header positioning adjustments, and a Confirmation rail kerning override.
- public/images/alla-vostra/tutorial/tutorial_screen_large_step_01.png through tutorial_screen_large_step_05.png: added five Android Large Tutorial capture assets for the UX Product Flow Tutorial stage.
- portfolio_PROJECT_SNAPSHOT.txt: refreshed during the source commit and refreshed again immediately before generating this August 16 PDF, now recording the latest source tree, git context, worklog inventory, and documentation state.
- portfolio_worklog_august16.pdf: generated as the new root-level PDF worklog artifact for this August 16 Portfolio session.

Follow-Up Context

- The latest committed source state before this PDF was generated is 2edd9ed on main and origin/main. The only local changes after the documentation pass are the refreshed portfolio_PROJECT_SNAPSHOT.txt and the new portfolio_worklog_august16.pdf artifact.
- The UX diagram intentionally retains the user-directed Order Confirmed spelling from the active source state rather than correcting it silently inside this documentation pass.
- The On-Scrolling secondary-focus card currently reuses the primary-focus screenshot while retaining secondary-focus size. A later user request asked to remove that device frame and apply a transparency gradient rising to full opacity at the Taste image with cream from the bottom, but that implementation was not completed before this worklog request superseded it.
- Future edits to the flow diagram should account for the coordinate-frame trimming and equal-section redistribution, since node and connector values now assume the six equal vertical bands.
- Future edits to screenshot-flow sequencing should preserve the current high-level order: Tutorial, Browse, SHOP, Cart, Checkout, and Confirmation unless the user asks for another structural reorder.
- No commit, push, deployment, publish, or Hostinger synchronization was performed during this worklog-generation pass; the project convention remains to ask the user for the commit message before committing or pushing.

Output Artifact

- Created portfolio_worklog_august16.pdf at the root of /Users/prahlin/gh/portfolio using the same root-level filename pattern as the prior Portfolio PDFs.
- The PDF was generated after reading the complete existing Portfolio worklog set, refreshing the project snapshot, checking current git state, and reviewing the latest committed source scope.

- The document records the August 16 Alla Vostra UX Product Flow, screenshot-flow, UI Foundations Visual Hierarchy, tutorial-asset, cache-clearing, validation, and documentation work in the established Prahlín Portfolio worklog format.
