

Prahl Portfolio Work Log - September 12, 2026 (Part 1)

Compiled summary for Saturday, September 12, 2026 - Part 1 - focus: continuing the Prah.dev Portfolio Alla Vostra project-page refinement after the September 11 release-overview and interaction pass, honoring the newly reinforced local-only Portfolio workflow rule, running the customary project reader, studying every pre-existing root-level Portfolio PDF worklog, reshaping the Overview release media around paired App Store and Google Play image stacks, importing additional Play Store screenshot assets, refining the Overview copy and hero release chips, adding an Interactive Demo placeholder section for a future autoplay walkthrough, switching the hero Google Play button to the official white surface, clearing local development caches, validating TypeScript and local route health, documenting the committed source state at 18d0474, refreshing the Portfolio project snapshot, and generating the September 12 Part 1 Portfolio PDF worklog.

Generated in continuity with the established Prahl Portfolio daily worklog cadence: compact opening summary, source-material section, baseline section, goal list, work-completed sections, validation section, files-touched list, follow-up context, and output-artifact close.

This artifact intentionally covers Prahl/portfolio work performed after `portfolio_worklog_september11.pdf` and after the September 11 documentation state. The current source state reviewed for this record is 18d04744f9cd2427233f6ca1e11e68b5357c5c89 on main, titled Refined Alla Vostra overview media and interactive demo placeholder. No public deployment, Hostinger deploy-branch work, remote synchronization, or production publish was performed during this record. The local documentation delta created before this PDF was the refreshed `portfolio_PROJECT_SNAPSHOT.txt` file; this PDF is the new September 12 Part 1 root-level documentation artifact.

Source Materials Reviewed

- Verified the United States Eastern date with TZ=America/New_York date during the documentation pass, which reported Saturday, September 12, 2026 at approximately 2:36 PM EDT with UTC offset -0400. The worklog therefore uses September 12, 2026 and the Part 1 suffix requested by the user.
- Ran `./read_project.sh` from `/Users/prahlin/gh/portfolio` and regenerated `portfolio_PROJECT_SNAPSHOT.txt` before writing this worklog, preserving the Portfolio convention that the current source snapshot is refreshed before session documentation.
- Reviewed the refreshed `portfolio_PROJECT_SNAPSHOT.txt` for the current tree, public image inventory, source dumps, package scripts, git state, generated/cache policy, PDF inventory, and standing project instructions, including the requirement to ask for a commit message before committing or pushing.
- Extracted and studied all thirty-five pre-existing root-level Portfolio PDF worklogs with pdftotext: the July 11, 14, 15 Part 1, 15 Part 2, 16, 19, 20, 21, 22, 23, 24, 25, 29, 30, and 31 records; the August 1 Parts 1-3, August 3, 4, 5, 6, 10 Parts 1-2, 11, 12 Parts 1-2, 14, 16, and 24 records; and the September 7, September 8, September 8 Part 2, September 9, and September 11 records.
- Compared the prior PDFs for naming, title cadence, page dimensions, opening-summary density, section order, bullet-heavy technical voice, validation language, files-touched treatment, follow-up continuity, and output-artifact closure. The mature records use root-level dated filenames and add part suffixes for same-day or user-requested part artifacts.
- Checked `pdftinfo` and `pdffonts` on the latest baseline worklog. The accepted output convention

remains US Letter at 612 x 792 points, PDF 1.4, Helvetica and Helvetica-Bold Type 1 fonts, and Codex author/creator/producer metadata.

- Reviewed local source state and changed files through git status, git diff, git show --stat, and direct reads of app/projects/alla-vostra/page.tsx and app/globals.css. This was limited to the local portfolio repository and current source state.
- Reviewed the new local public assets public/images/alla-vostra/play-store/playstore1_feature-assets90_1920x1080.png and public/images/alla-vostra/play-store/playstore3_trim-lr10.png for dimensions and intended Overview usage.
- Kept the session local-only under the user's reinforced Portfolio rule: no public pulls, no Hostinger inspection, no deploy branch work, no remote publish, and no external synchronization unless explicitly requested.

Baseline Status Before September 12 Part 1 Work

- The September 11 state had rebuilt the Alla Vostra Overview around a feature image plus narrative split, paired App Store and Google Play release grids, a full-width three-promo screenshot strip, refined hero metadata, official Google Play facts, provisional App Store facts, and restrained interaction treatments elsewhere on the page.
- The Overview supporting promo screenshots still lived as a separate full-width row below the release grids, which made the release blocks feel less connected to the store visuals they described.
- The Overview copy still carried a long role-summary paragraph and did not yet mention that customers could inspect product information, read the brand philosophy, or contact the business owner directly.
- The hero release chips still used the longer Play Store Prep and App Store Prep labels, and the Google Play source button used a red fill rather than Google's official white surface.
- The page had no obvious future location for a short interactive app demonstration video showing the user moving through the app in real time.
- Local Turbopack development cache had repeatedly served stale compiled CSS during rapid visual iteration, so clear-dev-cache requests remained part of the working rhythm.

Goals for September 12 Part 1

- Preserve the local-only Portfolio workflow rule and avoid all public, Hostinger, deployment, or remote actions during this documentation pass.
- Move the Overview supporting Play Store promo screenshots into the release-grid area and then split them into matched two-image stacks for App Store and Google Play.
- Import the missing Play Store screenshot asset with the single framed mosaic/trapezoid product treatment and use it in the release media stack.
- Investigate and briefly try a higher-resolution main Overview feature image, then restore the previous 1024 x 500 feature graphic after review.
- Tighten Overview copy by removing the role-summary paragraph and expanding the remaining product description to mention product details, brand philosophy, and direct owner contact.
- Add a future-facing Interactive Demo placeholder immediately after Overview, with a left-aligned section heading and centered device-frame/caption treatment.
- Switch the hero Google Play button from its red surface to an official white background while leaving the App Store button blue.
- Validate the final local work with TypeScript, local route health, rendered layout checks where useful, cache clears, and source/status review before generating this PDF.

Work Completed - Overview Copy and Release Media

- Removed the extra Overview role-summary paragraph so the section presents a cleaner single-copy block before the release grids.
- Extended the remaining Overview paragraph to state that customers can access in-depth product-offering information, learn about Alla Vostra's brand philosophy, and contact the business owner directly.
- Moved the old full-width row of three supporting Play Store promo screenshots into the release-grid area, first under Google Play and then into paired two-image stacks tied to App Store and Google Play.
- Imported playstore3_trim-lr10.png into the Portfolio public Play Store image folder and used it as the framed mosaic/trapezoid screenshot requested for the release-media arrangement.
- Built explicit image arrays for the release promo pairs so the Overview can place App Store and Google Play images independently instead of relying on one generic supporting screenshot slice.
- Swapped the App Store and Google Play image-stack placements after review so each release column shows the requested pair of visuals.
- Converted the release promo rows from a three-across flex strip into two equal grid columns, making each two-image stack stretch the full left-to-right width of its respective release column.
- Kept the paired release facts at equal 50/50 column widths while moving image rows above the facts so both release columns share a matched vertical rhythm.

Work Completed - Main Overview Image, Hero Chips, and Store Button

- Investigated the low-resolution look of the large Overview feature image by checking local Portfolio assets and the local Alla Vostra Play Store asset folders for higher-resolution alternatives.
- Imported playstore1_feature-assets90_1920x1080.png as a higher-resolution 1920 x 1080 candidate and added a 16:9 feature-hd aspect class for safe testing.
- Restored the large Overview feature image back to feature-graphic-upload-clean-1024x500.png and its original 1024 / 500 feature aspect after the user chose the previous version.
- Renamed the hero metadata chips from Play Store Prep and App Store Prep to Play Store and App Store for a cleaner top-of-hero release signal.
- Changed the Alla Vostra hero Google Play button background from red to #ffffff, matching the official Google white surface direction while leaving the App Store button on its existing blue override.
- Preserved the GitHub, App Store, and Google Play hero source-button structure and icon-only sizing while limiting the color change to the Google Play button surface.

Work Completed - Interactive Demo Placeholder

- Added a new Interactive Demo section immediately after Overview and before Scope and Ownership, matching the recommended placement for a future autoplay app walkthrough.
- Reused the centered Alla Vostra hero startup device-frame asset as a large placeholder device frame for the future video demonstration.
- Added one concise placeholder sentence describing a short autoplay walkthrough from browsing products to reviewing checkout.
- Styled the Interactive Demo section so the section heading remains left-aligned with the other page sections while the device frame and caption text stay centered.

- Corrected the device placeholder's aspect ratio, relative positioning, maximum width, object-fit behavior, and drop-shadow treatment so it renders as a tall phone frame rather than a stretched horizontal image.
- Confirmed the rendered Interactive Demo heading, device frame, and caption positions through local browser measurement after the CSS adjustment.

Work Completed - Local Cache, Workflow Rules, and Documentation

- Booted and kept the local Next.js development server available at <http://127.0.0.1:3000> for Portfolio work.
- Cleared local development cache multiple times on request by stopping the dev server, moving generated .next output into timestamped /tmp/portfolio-next-cache-* folders, and restarting the local server.
- Reinforced the standing Portfolio rule that this project should not pull information from public sources, inspect Hostinger/deploy state, push data, publish, or consult remotes unless the user explicitly requests that work.
- Kept the final documentation pass scoped to the local portfolio repository and current source/worklog artifacts.
- Provided a commit-message recommendation with one past-tense header and hyphen-prefixed change points covering the Overview media, Interactive Demo placeholder, hero button, copy, assets, and snapshot refresh.
- Recorded the current committed source state at 18d0474, Refined Alla Vostra overview media and interactive demo placeholder, which contains the app source, CSS, refreshed snapshot, and newly tracked Play Store image assets.

Validation Summary

- Ran npm run check after the Overview, Interactive Demo, hero-chip, and Google Play button updates; TypeScript completed successfully with tsc --noEmit.
- Verified the local Alla Vostra route with curl -I -L --max-time 5 <http://127.0.0.1:3000/projects/alla-vostra> and confirmed HTTP 200 from the local Next.js server.
- Used Playwright locally during the layout work to check desktop, 390px, and 320px Overview release-media widths, confirming no document-level horizontal overflow and that the paired promo rows matched their release-grid column widths.
- Used Playwright locally to verify the Interactive Demo section's computed layout: the heading aligned to the left shell edge, while the device placeholder and caption remained centered.
- Ran git diff --check during documentation review. The only reported whitespace warnings came from the generated portfolio_PROJECT_SNAPSHOT.txt line-numbered source dump; application source was already committed and not carrying an active source diff at the time of this PDF generation.
- Confirmed the new Play Store image assets exist locally with expected dimensions: playstore1_feature-assets90_1920x1080.png at 1920 x 1080 and playstore3_trim-lr10.png at 1536 x 1080.
- Reviewed git status before PDF generation. After read_project.sh refreshed the snapshot, the only dirty tracked file was portfolio_PROJECT_SNAPSHOT.txt before this new PDF artifact was written.

Files Touched and Artifacts

- app/projects/alla-vostra/page.tsx - renamed hero release chips, split Overview release-media

data into explicit App Store and Google Play image stacks, expanded Overview copy, removed the role-summary paragraph, added the Interactive Demo placeholder section, and restored the main Overview feature image to the prior 1024 x 500 asset.

- app/globals.css - changed the hero Google Play button background to white, removed the old standalone Overview promo grid area, converted release promo rows to two-column grids, added matched release-facts spacing, added temporary feature-hd image support, and styled the Interactive Demo layout, centered device frame, and caption.
- public/images/alla-vostra/play-store/playstore3_trim-lr10.png - added the Play Store screenshot with a single framed mosaic/trapezoid product image for the release-media stack.
- public/images/alla-vostra/play-store/playstore1_feature-assets90_1920x1080.png - added the higher-resolution feature candidate inspected during the Overview image-quality pass.
- portfolio_PROJECT_SNAPSHOT.txt - refreshed through ./read_project.sh so the snapshot records the September 12 source tree, public image additions, source dumps, recent local source state, and current PDF inventory.
- portfolio_worklog_september12_part1.pdf - generated as this root-level dated Part 1 Portfolio PDF worklog artifact.

Follow-Up Context

- The Overview feature image is intentionally back on feature-graphic-upload-clean-1024x500.png. The imported 1920 x 1080 asset remains available locally if a future crop, responsive source, or alternate presentation is wanted.
- The release-media stacks now live inside the App Store and Google Play release columns. Future Overview changes should preserve the equal two-column rhythm unless the release section is intentionally redesigned.
- The App Store release facts remain provisional. Replace TBD, Pending, and iOS TBD only after verified App Store listing or production-build facts exist.
- The Interactive Demo section is a placeholder for a future autoplay, muted, playsInline video. Its heading is intentionally left-aligned like other sections, while the media and caption remain centered.
- The Google Play button now uses a white surface. Future icon or button tweaks should check contrast against white rather than assuming the former red background.
- The local-only Portfolio rule should continue to govern future work: no public pulling, no Hostinger/deploy inspection, no pushing, and no publishing unless the user explicitly asks, usually at the end of a session.
- If browser output again looks stale, move generated .next output to /tmp and restart the dev server before changing valid source CSS.

Output Artifact

- Generated: /Users/prahlin/gh/portfolio/portfolio_worklog_september12_part1.pdf
- Companion sync file: /Users/prahlin/gh/portfolio/portfolio_PROJECT_SNAPSHOT.txt
- Source state reviewed: 18d04744f9cd2427233f6ca1e11e68b5357c5c89 on main.
- Naming follows the user-requested Part 1 convention: portfolio_worklog_september12_part1.pdf.
- The document records the September 12 Part 1 Alla Vostra Overview release-media restructuring, Overview copy edits, Play Store image asset additions, hero release-chip and Google Play button refinements, Interactive Demo placeholder, local cache clearing, local validation, refreshed snapshot, and documentation work in the established Prahlin Portfolio worklog format.
- This worklog closes the September 12 Part 1 documentation pass. No source commit, push,

deployment, public publish, Hostinger synchronization, or remote inspection was performed as part of generating the PDF.
